November 2026 Firewood & Forest Pests Newsletter

Graphic of various firewood photos and information on the Firewood Comparison Report published by Don't Move Firewood. A one-stop-shop for all regulations pertaining to firewood in the USA.

DON'T MOVE FIREWOOD.org

Updated Firewood Comparison Report Available Now

In the United States, many state-based firewood-relevant regulations and certification capabilities have changed significantly in the recent years- especially as pest conditions change, and regulations and outreach change with them. As a result of this dynamic situation, the team at Don't Move Firewood maintains a comprehensive research and synthesis report of firewood regulations, certification, and a standardized sample of outreach statuses in the US, with the goal to provide simple and accurate professional comparative summaries for each major topic area. We update this information every 1-2 years to reflect current shifts in both regulation and outreach. The latest version is available now! **THANK YOU to our many, many fact checking and situation reporting partners around the country- we could not do this without you**.

Thanks for a Great Firewood Month!

Thanks so much to all of you who participated in Firewood Month, sharing information and spreading awareness on the importance of using firewood locally. We saw many awesome news articles, blogs, graphics, newsletter posts, and social media posts. Your help goes a long way in reducing the spread of invasive forest pests! We also had a good turnout for our webinar series. If you missed a live webinar you were interested in, recordings and PPT slides are available via the webpage linked below.

EAB Webinar this Thursday

This **Thursday, November 12 at 1:00 PM PST**, join the NW RISCC Network for a timely webinar on emerald ash borer (EAB), one of the most significant threats to ash trees in the Northwest. Learn about new research on how EAB is expected to spread under current and future climate conditions from Lauren Walker (University of Oregon), and hear from Max Ragozzino (Oregon Department of Agriculture) about Oregon's EAB biocontrol program and efforts to protect vulnerable ash resources.

Holiday Greenery Outreach

Christmas Trees, Wreaths & Decorations May Contain Forest Pests

You've seen it, holiday decor is already overtaking store shelves…which means it's time to think holiday greenery outreach for those planning to decorate with fresh greenery this holiday season! Real Christmas trees, wreaths, and garlands can harbor insects or plant pathogens, but a few simple precautions can help reduce the risk of spreading forest pests. We have practical tips to promote for this time of year: Cut your own tree from a nearby forest (with the appropriate permit) or visit a local Christmas tree farm, purchase pre-cut trees and greenery from established local businesses, and buy online only from reputable vendors that you are confident would comply with quarantine regulations. By choosing local and trusted sources, we can enjoy the benefits of real holiday greenery while helping protect forests from invasive pests and diseases.

Visit the DMF Holiday Greenery page for more information and outreach tips >>
