NEED FOR THE RULE(S)

Veterinarians in Oregon are required to report certain conditions and diseases in livestock to the Oregon Department of Agriculture. These reporting requirements fall into three broad categories, which have historically been contained in a single rule, leading to confusion on how to report specific diseases. Splitting this single rule into three separate rules, one per reporting category, will reduce confusion. Additional modifications are being made to clarify and update scientific and common names of diseases without making any functional changes to diseases that are reportable or the timeframe for reporting.
