

Handler Commercial Availability Record

Operation Name:

Products labeled “organic” must contain at least 95% organic ingredients. To be used in the remaining 5% of the product, non-organic agricultural ingredients must be listed in §205.606 of the National List AND it must be demonstrated that they are commercially unavailable in an organic form. The National Organic Program defines commercially available as: *the ability to obtain a production input in an appropriate form, quality, or quantity to fulfill an essential function in a system of organic production or handling, as determined by the certifying agent in the course of reviewing the organic plan.*

Certified operations and operations seeking certification are responsible for documenting efforts to source organic forms of ingredients from reasonable sources. Please use this form as a tool to document the search for organic forms of ingredients before you request the use of non-organic form(s). Submit a copy of this completed form when requesting certification of a new product with non-organic agricultural ingredients.

You must update this information and ensure you have a system in place that regularly searches for organic forms of ingredients, in order to receive continued approval of the non-organic form for the ingredient even in situations where the ingredient has been added to Section §205.606. Please have this information available for review during your organic inspection.

Product	1 st source (name, phone, date)	2 nd source (name, phone, date)	3 rd source (name, phone, date)	Reason organic ingredient could not be used
