The Oregon Legislature passed the Agricultural Water Quality Management Act in 1993. It requires the Oregon Department of Agriculture (ODA) to prevent and control water pollution from agricultural activities.

As a result, ODA worked with local advisory committees to develop Water Quality Management Area Plans and Rules throughout the state. Area Plans are reviewed and updated by ODA and the local advisory committee every two years. The original Inland Rogue Area Plan and Rules were approved by ODA in 2001.

» The Area Plan

The Area Plan guides local landowners and their conservation partners on how to prevent pollution. It includes information on agricultural water quality concerns and recommendations for addressing them.

The Area Plan does not tell anyone how to farm, ranch, or otherwise use natural resources. Rather, it includes recommended practices from which a landowner can choose. The practices can help meet business and conservation goals, while also preventing water pollution.

Agricultural water quality concerns in the Inland Rogue are primarily:

• Nonpoint pollution
• Degraded fish habitat

» The Area Rules

The Agricultural Water Quality Program focuses on voluntary and cooperative efforts by landowners and others to protect water quality.

However, the Agricultural Water Quality Management Act also includes enforcement to ensure prevention and control of water pollution from agricultural sources.

Area Rules allow landowners flexibility in how they protect water quality. Area Rules describe conditions that landowners must achieve on
agricultural lands, rather than practices they must implement.

All agricultural landowners must allow vegetation along:

- Year-round streams to provide shade, stabilize banks, and filter out pollutants from overland flows.
- Seasonal streams to stabilize banks and filter out pollutants from overland flows.

In addition, landowners must not pollute ground or surface water by discharging wastes* into waters of the state or placing any wastes in a location where they are likely to enter waters of the state.**

* Wastes include excess soil, manure, fertilizer, or other substances that can pollute water.
** Waters of the state include ponds, groundwater, canals, ditches, and rivers.

The local advisory committee helped ODA develop Area Rules (Oregon Administrative Rules 603-095-1440) specifically for the Inland Rogue. These Rules address water quality issues identified in the Area Plan.

The following is a summary of regulations that apply to the Inland Rogue area:

- There shall be no visible evidence of erosion resulting from agricultural management in a location where erosion has contributed or will contribute sediment to waters of the state.
- Agricultural management of riparian areas shall not impede the development and maintenance of adequate riparian vegetation to control water pollution.
- Runoff of surface irrigation that enters waters of the state shall not exceed water quality standards.
