

ELEVATING STUDENT VOICE

Student Educational Equity Development (SEED) Survey

Accessing Data and Results

This document describes how to access data and results from the SEED and Alt-SEED Surveys.

Public Data and Results

Publicly available data and results are posted on the [SEED webpage](#) in the following formats:

- **State reports.** Reports provide a narrative overview of the results each year.
- **State and ESD Boundary level survey response summary data files.** Data files provide the counts and percents of students' responses, by item and grade.
- **State, ESD Boundary, and district level domain score files.** Data files provide domain scores that are parsed by student group and grade.
- **Additional publications.** Other publications (e.g., research briefs) provide a narrative description of results for a specific SEED domain or student group.

Private Data

Privately available data are shared with districts via the Achievement Data Insight (ADI). Access to this data is granted at the discretion of the [District's Security Administrator](#) (DSA). School and district personnel who wish to access their district's private data should contact their DSA. Data are available in the following format:

- **District level survey response summary data files.** Data files provide the counts and percents of students' responses, by item and grade. Data can be viewed directly in the ADI or downloaded as an Excel file.

Note. ODE recommends utilizing the [SEED Survey Item Comparison by Grade](#) document when reviewing the privately shared district-level data.
