

Digital Access of State Adopted Instructional Materials - Health

Instructional materials used in Oregon’s classrooms need to reflect the most current information and research and be aligned to academic content standards. To this end, these instructional materials are subject, by law, to a review process and must meet established specifications and criteria in order to be approved by the State Board of Education for use in classrooms. Districts are required to adopt basal instructional materials in order to teach to the academic content standards. Basal instructional programs is defined as “a major instructional vehicle may include such instructional materials as a hardbound or a softbound book or books, or sets or kits of print and non-print materials, including electronic and internet or web-based materials or media ([OAR 581-011-0050\(2\)](#)).

How to use this document:

With this document, districts can confirm if the program they have adopted and purchased gives students digital access to content materials on a personal computer or device at home of their adopted program. Every listed instructional program in the table below has an online student edition that can be accessed by a student on a personal computer or device at home. Teachers should be able to continue to assign chapters, units, or lessons for students to access and learn from during school closures. Any vendor or publisher information about digital resources may be used to supplement your basal and adopted instructional program.

If districts independently adopted instructional materials not listed below, or not approved by the Oregon State Board of Education, they may need to contact and work with their publisher representative. The Oregon Department of Education cannot ensure digital access to a student edition for any basal instructional program not listed here, nor any instructional program independently adopted by your school board. You may contact any publisher listed below to find out if they offer free access to any of these basal/core instructional programs.
