

The Student Mobility Rate identifies the percentage of students who have had significant enrollment gaps, late enrollment, early exit, or enrollment changes between schools.

Data Source: 3rd Period Cumulative ADM for the current school year, including all students in grades K-12, and all records except for program types 02, 03 (weighted funding), 05 (non-instructional case management), and 14 (included only for the purpose of outcome determinations, and not considered enrollment records).

Flag Type	Definition
Late Entry	The student's first enrollment during the school year began after the first school day in October.
Early Exit	The student's last enrollment during the year ended before the first school day in May, and the student did not have one of the following excluded ADM End Date Codes: 3B (Exceeded age requirements); 4A, 4C, 4D, 4E (Earned a credential); 6A (Deceased); and 6B (Previously earned a credential; returned and re-exited).
Significant Gap	The student had an enrollment gap of at least ten days between two records for the same school, during which they were: a) Not enrolled in any public Oregon K-12 institution b) Did not have an ADM End Date code of 2B or 2C (transfer to a private or out-of-state school) Students with an ADM End Date code of 2B or 2C are still calculated as mobile, but receive a flag for attending multiple schools rather than for having a significant gap.
Multiple Schools	The student had enrollment within more than one attending school.

Aggregation

Total Students: Number of unique students enrolled in the school or district at any point during 3rd period Cumulative ADM.

Mobile Students: Number of students flagged as mobile according to the criteria above.

Mobility Rate: $(\text{Mobile Students} \div \text{Total Students}) \times 100$
