Monthly Minute: Earthquake Safety

October 2021

Monthly Minute is a newsletter providing insight and tips on potential threats and hazards brought to you by your regional school emergency management professionals in partnership with the Oregon Department of Education.

Cascadia is only one earthquake hazard that Oregon faces. While a major earthquake near the coast could affect much of the state, smaller earthquakes elsewhere can still cause enough damage to interrupt daily life. Earthquakes can have broad impacts including damage and disruption to utilities, roads and buildings.

A high-quality emergency operations plan will consider actions to take before,

during and after an earthquake. Set goals that are achievable in any time or place. Here are some things to consider before, during and after an earthquake:

- Inspect your facilities early and often to identify weak points that could worsen in an earthquake—even if you are unable to reinforce all weak points now, knowing what and where they are could inform your plan of action during and after an earthquake.

- Establish and practice earthquake drills in your school. International shakeout day is the third Thursday of the month (October 21st).
- Have a communications plan that will notify parents of an early dismissal if your facilities become unsafe to occupy.
- Have a plan in place that will support all persons with access and functional needs—consider everyone who may need additional assistance in a disaster.
