$\qquad$

## CAPTURE \& RECAPTURE

1. From the paper bag pull out (capture) a handful of beans and mark each one.
2. Put the marked beans back in the bag and shake the bag.
3. From the bag, pull ten beans. Count how many of those are marked and how many are unmarked and fill in the sheet below. Put the beans back into the back and shake.
4. Pull out ten more beans. Count how many beans are marked and unmarked.
5. Repeat this process six times.

Number of beans you marked from step 1: $\qquad$
Use this equation for your proportions
Marked Beans (in handful) Total Marked Beans (in cup)
$\qquad$ = $\qquad$

Total Beans (in handful) Total Number of Beans (in cup)

| Trial Number | Number of Marked beans | Total Number of beans | Marked beans: total Number (ratio) | Estimated Population (proportion equation) Solve for x |
| :---: | :---: | :---: | :---: | :---: |
| Example (42 marked beans from step 1) | 2 | 10 | 2:10 | $\begin{array}{cc} 2 & 42 \\ & = \\ 10 & x \\ 2 x & =420 \\ X & =210 \end{array}$ |
| 1 |  |  |  |  |
| 2 |  |  |  |  |
| 3 |  |  |  |  |
| 4 |  |  |  |  |
| 5 |  |  |  |  |
| 6 |  |  |  |  |
