

Decision Tree

This decision tree is intended to support Oregon educational leaders facing dilemmas and choices that require thoughtful intervention, design, and problem-solving. The sequence of questions is intentional and offers key considerations that could lead to decision-making that deepens relationships and trust, and avoids unintended impacts or harm to communities. This decision tree is not intended for *simple* problems, but rather complex problems that benefit from a deliberate decision-making process.

Decision Tools for SY2020-21

Oregon’s school leaders are faced with hundreds of decisions, large and small, each week. In preparation for the 2020-21 school year there are significant decisions to make without the ideal amounts of time or information. Three tools have been developed by ODE to support school leaders, including business managers, principals, assistant principals, teacher-leaders, and superintendents, to support making clear choices with a consistent check against key values and input.

The first tool is titled as a “Decision Tree” and is intended as the simplest, most consistent, and easiest to use in considering difficult decisions. It can also help leaders spot patterns or gaps in their thought process or point them to the use of the other two decision tools.

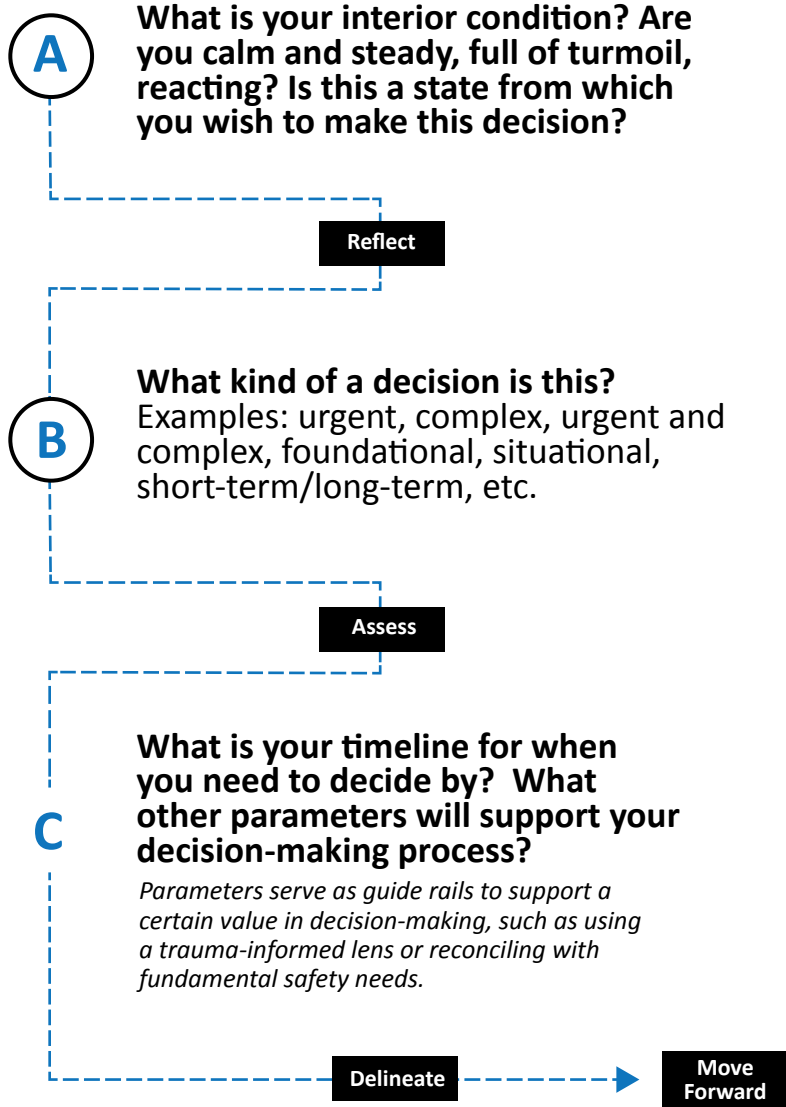

The second tool is a collection of “Deepening Questions” which offer leaders with a raft of prompts they could select from to deepen their own reflections or bring to community or staff meetings to help get underneath core decision making challenges.

Finally, we’ve adapted the “Consultancy Protocol,” with credit to the School Reform Initiative, for use in bringing a small critical friends group together in consideration of the most difficult design and decision-making dilemmas in leading for the 2020-2021 school year.

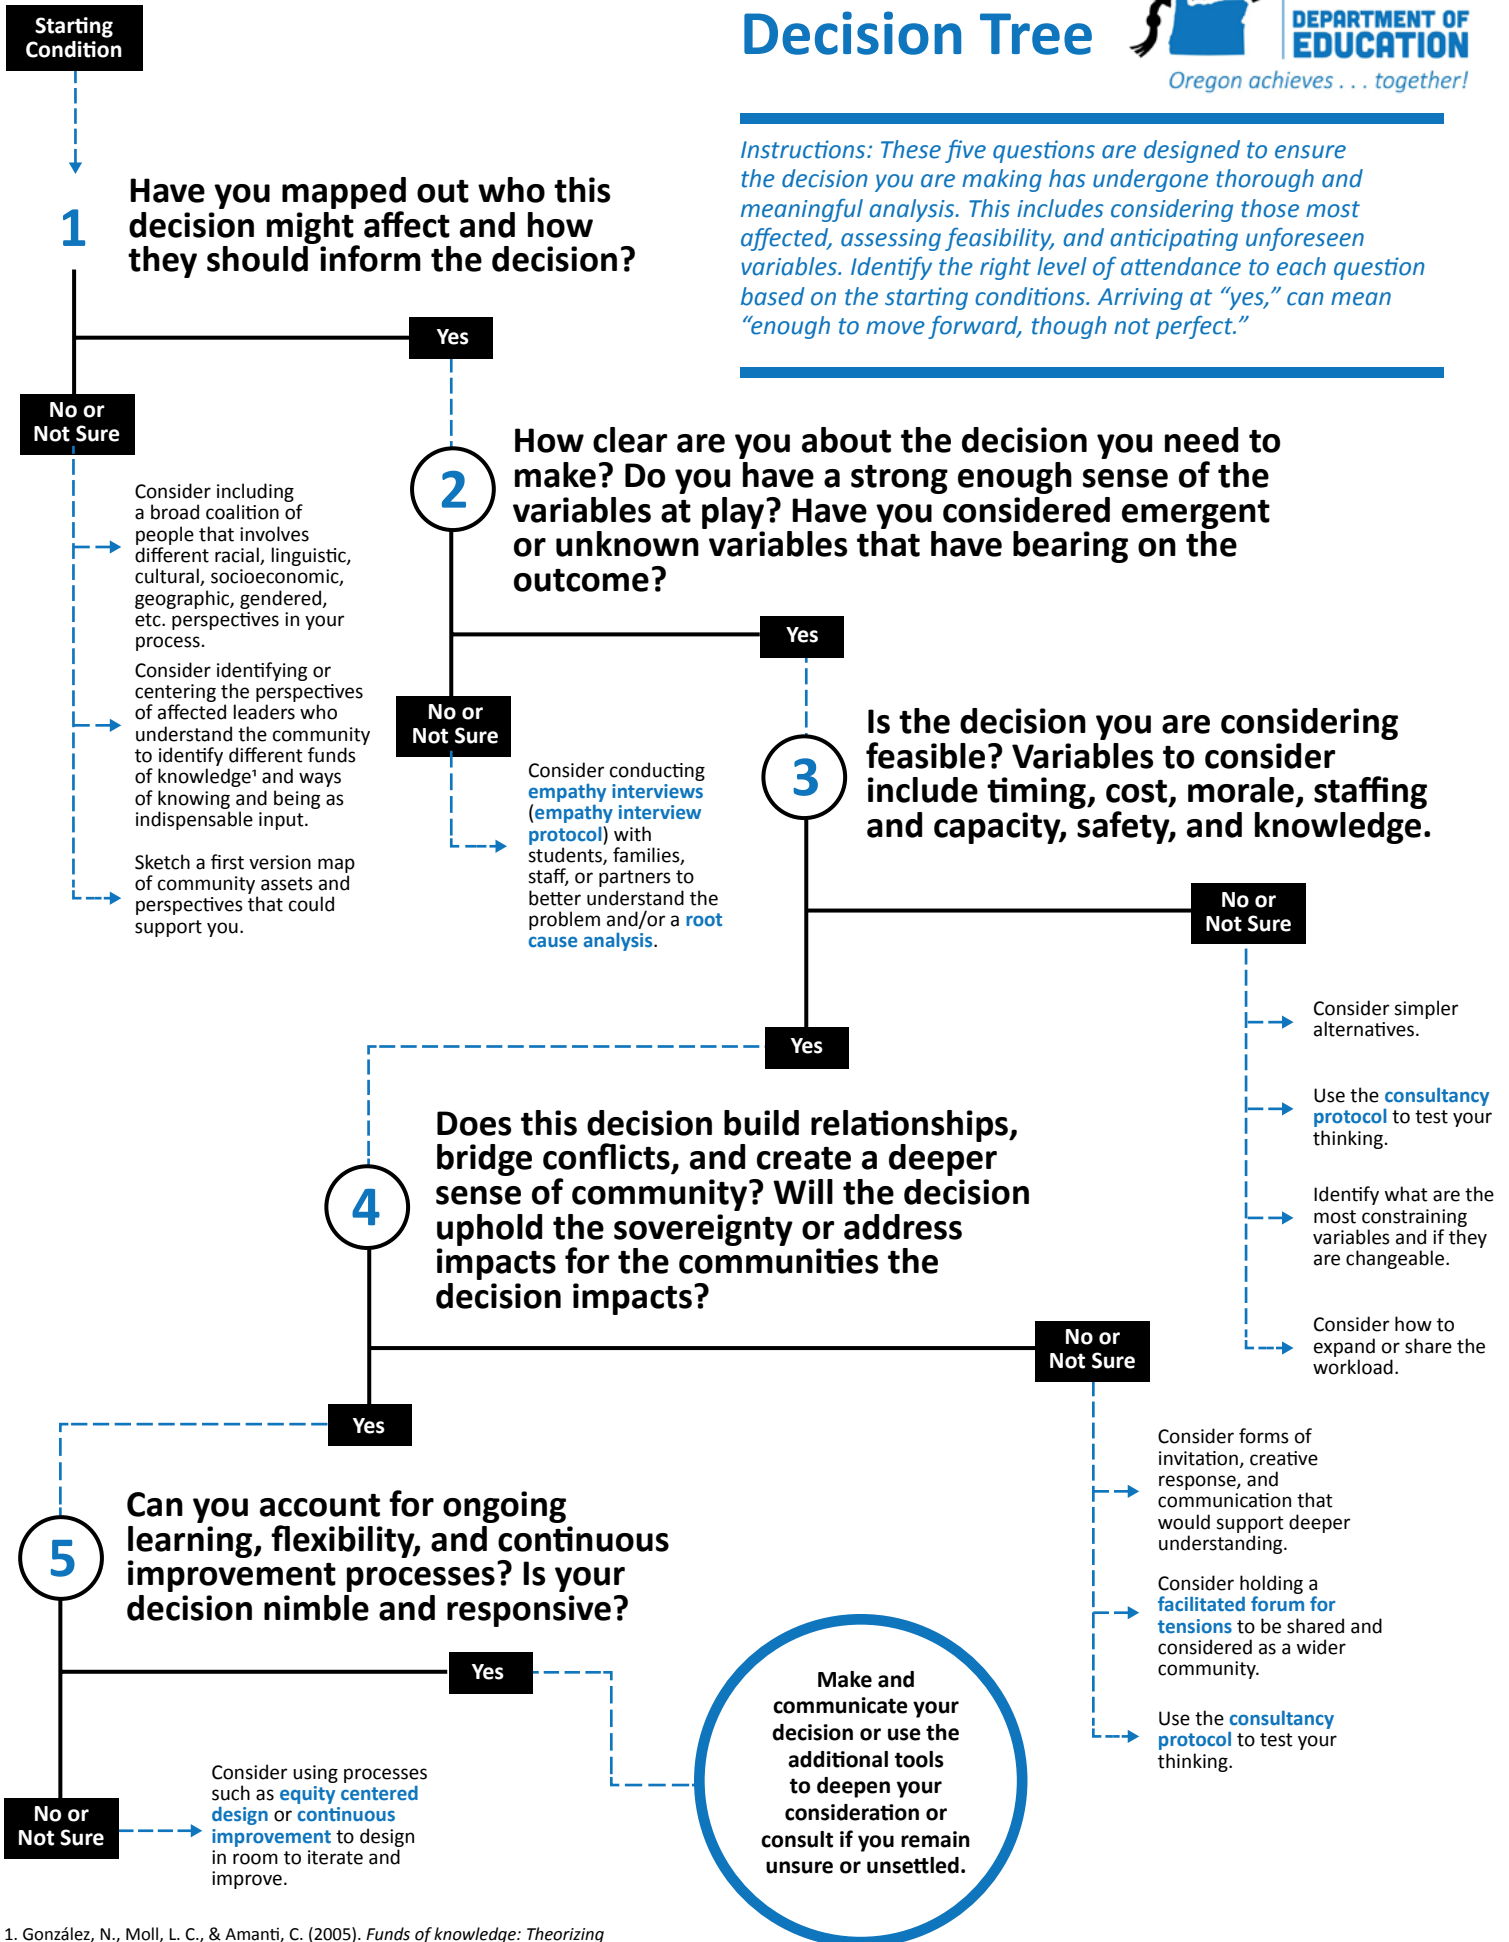

Taken together, these three tools provide leaders with concrete resources that can improve the quality of decision-making while supporting decisions to be made. The hundreds of decisions made by Oregon’s school leaders over the next three months will shape not just the next year but also shape the next several years as the kinds of decisions we make in difficult conditions are the clearest reflections of our values and visions.

Starting Condition

Instructions: Reflect, journal, or talk with a trusted partner through these three pre-questions. Addressing and assessing each will ensure you consider the conditions and parameters for the decision you need to make. Keep your responses in mind as you move through the five questions in the decision tree.

Instructions: These five questions are designed to ensure the decision you are making has undergone thorough and meaningful analysis. This includes considering those most affected, assessing feasibility, and anticipating unforeseen variables. Identify the right level of attendance to each question based on the starting conditions. Arriving at "yes," can mean "enough to move forward, though not perfect."

Deepening Questions

Instructions: The following questions are intended to help illuminate more dynamics and variables for decision-makers. These questions, grouped in the same categories as the decision tree questions, can stand alone as reflective prompts or be used to elaborate on each of the decision tree steps.

What is the problem?

- What assumptions and beliefs are embedded in this decision? Have you assessed if they are true?
- What research has been done related to your problem/dilemma? Are there models you can look to as an example?
- What are the conditions or variables that need to be true for your decision to work? Are there other variables that would complicate the conditions needed to make your decision a success?
- Where do you see disproportionality? Do you see over or under representation in key experiences or outcomes?
- Where do you have gaps in knowledge/resources? What additional information, insights or tools do you need in order to make a decision?

What are your interior conditions?

- What awareness, strengths, and fears do you want to use and rely on this process?
- What parts of yourself are going to be called into action?
- How much do you want to change part(s) of this community? How wide a reach do you want changes to extend?
- How might your goals differ from other perspectives you are aware of?
- What has helped you make difficult decisions in the past? What have you learned from prior mistakes?

Who are the decision-makers and designers?

- Who is included or excluded in this decision making process and why?
- What kind of design, co-development or decision-making process is being used and why?
- Have you considered new partners that are not normally part of the design or decision-making process?
- How are you using and applying a lens of culturally sustaining practices, deep learning, or antiracism?
- How are you centering safety and trauma-informed practices in the decision?

Are your solutions feasible?

- Can you reconsider your timeline for making a decision? What parts of the timeline are fixed? Where is there room for adjustments to the timeline?
- Who is able to connect with the community to communicate the decision that needs to be made? Who is able to continue engaging with families, community members, and partners? What is their capacity to engage

- vulnerable and marginalized community members?
- What is your current staffing capacity? What additional supports are needed to support your staff with implementing this decision?
- What guaranteed funding do you have to implement this decision? What can you reprioritize in order to be able to reallocate funding? What variables could further impact funding?

Does your decision deepen a sense of community and relational trust?

- How do your communication protocols engage community members as partners and assets?
- How are you acknowledging and valuing families' and communities' sovereign choices and unique wisdom?
- What is your staff's ability to navigate differences of power and privilege as they work with vulnerable families and communities?
- How does this decision recognize and engage different knowledges and ways of knowing?
- What assumptions, if any, are baked into your decision that require the exertion or force of power to execute?
- Is there any possibility that this decision will create traumatic (or re-traumatizing) experiences for anyone?

How are you implementing this decision? What are you learning along the way?

- Does your implementation plan allow for ongoing learning and flexibility as new dynamics emerge? How? What is iterative in your implementation plan (e.g. allowing for emergent participation, co/re-design, etc)?
- What does success look like? What evaluative measures are able to assess if the decision was a success or not? Who is held accountable and by whom throughout this implementation?
- Does your implementation plan engage/activate the community meaningfully? Considerations include:
 - How does your plan create space for collective implementation, improvement and empowerment?
 - How consistent is implementation across degrees/types of privilege, access, and power?
 - What is working? Under what conditions? And, for whom?
- Have you created space and/or processes to reflect on this decision? Considerations include:
 - Mechanisms to receive qualitative and quantitative feedback
 - Considering who provides this feedback and how you will process it
 - Being able to capture emergent variables, such as unintended consequences/impacts
 - Including multiple perspectives to reflect and iterate
 - Debriefing and learning from encounters/interactions across degrees of power/privilege
- Does this decision make school better than it has been before? How and for whom?
- What is the status of the problem after implementation? What problem are you trying to solve or what are you trying to learn? How will you know a change is an improvement? What changes could you make and why?
- How are you able to scale and elevate promising practices, solutions, and ideas from your community? Are there dynamics of power preventing local successes from sustaining or spreading?

Dialogue and Consultancy on SY20-21 Decisions

This consultancy protocol has been adapted from the one developed by Faith Dunne, Paula Evans, and Gene Thompson-Grove as part of their work at the Coalition of Essential Schools and the Annenberg Institute for School Reform.

Purpose

Help Oregon school leaders think more expansively about concrete dilemmas in making decisions and designs for the 2020-21 school year. The consultancy is designed to develop the [presenting school leader's and all participants'] capacity to see and better understand the dilemma while uncovering new or different approaches to potential decisions or actions.

When is this the right tool?

A dilemma is a puzzle: an issue that raises questions, an idea that seems to have conceptual gaps, or something about process or product that you just can't figure out. All dilemmas have some sort of identifiable tension in them. This protocol will be useful when leaders would benefit from a "huddle" with members of their team, peers, or trusted community members who can hold the complexity of the dilemma and the kind of stretching and vulnerability that might be required to get to the strongest decision making. This protocol is not useful when the dilemma is no longer a dilemma or is already on the way to being solved.

See and better understand the dilemma being faced while uncovering new or different approaches to potential decisions or actions to take.

Pre-work prior to consultancy and dialogue:

1. Do enough reflective writing or thinking to sharpen the consultancy.

- Is it something that is bothering you enough that your thoughts regularly return to it?
- Can you affect the dilemma by changing your practice, mindset, or direction setting?
- Is it something you are willing to work on and change your mind or stance about?
- What (or where) is the tension in your dilemma?
- Who needs to change? Who needs to take action to resolve this dilemma? What is your part or responsibility in the changes you are considering?
- What assumptions influence your thinking about the dilemma?
- What is your focus question? A focus question summarizes your dilemma and helps focus the feedback.

2. Create the right conditions for a successful consultancy.

- Bound your schedule for at least one hour. More ideal is to hold the consultancy for 50 minutes and then give yourself 20-30 minutes to sit with what you hear. Form some that could be moving from a consultancy to dialogue, for others that might work best for quiet internal dialogue and reflection.
- Share our dilemma and request for consultancy with a group of three to seven people who you think can act and be critical friends at this time. Outside perspective is critical to the effectiveness of this protocol; therefore, some of the participants in the group should be people who do not share the presenter's specific dilemma at that time.

Consultancy Protocol

Time: Approximately 50 minutes

Roles: Presenter, Facilitator (who sometimes participates, depending on the size of the group), "Consultants"

Process

1. Presenter and/or facilitator welcome the Group and walk through the consultancy process briefly (3 min)
2. The presenter gives an overview of the dilemma with which she/he is struggling, and frames a question for the consultancy group to consider. The framing of this question, as well as the quality of the presenter's reflection on the dilemma being discussed, are key features of this protocol. If the presenter has brought any "artifacts" there is a pause here to silently examine the work/documents. The focus of the group's conversation is on the dilemma. (10-15 minutes if there are artifacts to examine)
3. The consultancy group asks clarifying questions of the presenter — that is, questions that have brief, factual answers. (5 minutes)
4. The group asks probing questions of the presenter. The goal is for the presenter to learn more about the question she/he framed and to do some analysis of the dilemma presented. The presenter responds to the group's questions, although sometimes a probing question might ask the presenter to see the dilemma in such a novel way that the response is simply, "I never thought about it that way." There is no discussion by the consultancy group of the presenter's responses. At the end of the 10 minutes, the facilitator asks the presenter to restate their focusing question for the group. (10 minutes)
5. The group talks with each other about the dilemma presented. In this step, the group works to define the issues more thoroughly and objectively. Sometimes members of the group suggest actions the presenter might consider taking; if they do, these should be framed as "open suggestions," and should be made only after the group has thoroughly analyzed the dilemma. The presenter doesn't speak during this discussion, but listens in and takes notes. Often, while awkward at first, groups find that talking about the presenter in the third person helps the presenter listen and not feel pressure to respond. (15 minutes)

Possible questions to frame the discussion:

- What did we hear?
 - What didn't we hear that might be relevant?
 - What assumptions seem to be operating?
 - What questions does the dilemma raise for us?
 - What do we think about the dilemma?
 - What might we do or try if faced with a similar dilemma?
 - What have we done in similar situations?
6. The presenter reflects on what they heard and on what they are now thinking, sharing with the group anything that particularly resonated during any part of the Consultancy. (5 minutes)
 7. The facilitator leads a brief conversation about the group's observation of the Consultancy process. (5 minutes)

End of protocol and opportunity to move into dialogue as a group or for the presenter to have space to digest the learning and insights offered from the process to support clearer decision-making

Clarifying questions are for the person asking them. They ask the presenter "who, what, where, when, and how." These are not "why" questions. They can be answered quickly and succinctly, often with a phrase or two. The presenter has ready answers to clarifying questions.

Probing questions are for the person answering them. They ask the presenter "why" (among other things), and are open-ended. They take longer to answer, and often require deep thought on the part of the presenter before she/he speaks. Group members are encouraged to avoid suggestions and recommendations disguised as questions ("Don't you think you should...?" or "Have you ever thought about...?")
