School Occupational Therapy and Telehealth V.4

FREQUENTLY ASKED QUESTIONS

OREGON
DEPARTMENT OF
EDUCATION

Oregon achieves . . . together!

Introduction

The Oregon Department of Education is providing this FAQ in response to questions from school districts related to Occupational Therapy service provision via telehealth. The scope of practice for Occupational Therapists (OTs) is defined by the Oregon Occupational Therapy Licensing Board. The Board has verified the accuracy of the statements included herein as it pertains to Board rules. Nothing in this document should be interpreted as guidance that OTs are permitted to operate outside of their appropriate scope of practice. This document is meant to be a resource in combination with other guidance and resources on ODE's [Planning for the 2022-2032 School Year](#) web page.

School Occupational Therapy Telehealth FAQs

The Provision of a Free Appropriate Public Education (FAPE)

Each school district/school program must ensure that students who experience disabilities have equal access to the same opportunities available to the general student population, including the provision of a free appropriate public education (FAPE) (34 CFR §§ 104.4, 104.33 (Section 504) and 28 CFR § 35.130 (Title II of the ADA). State Education Agencies, Local Education Agencies, schools, and Early Childhood Special Education programs must ensure that, to the greatest extent possible, each student who experiences a disability be provided the special education and related services identified in the student's Individualized Education Program (IEP)/Individualized Family Service Plan (IFSP) developed under IDEA, or a plan developed under Section 504. (34 CFR §§ 300.101 and 300.201 (IDEA), and 34 CFR § 104.33 (Section 504).

School districts and/or school programs must make every effort to provide special education and related services, which may include mental and/or behavioral health services, to students in accordance with the student's IEP, IFSP, or, for students entitled to FAPE under Section 504, consistent with a plan developed to meet the requirements of Section 504. The services in a student's IEP, IFSP, or 504 Plan must be delivered, and teams should work with students and families to determine the methodology for delivering the services. The provision of health services via Telehealth is one methodology that may be utilized to help ensure a FAPE.

Please see [this letter regarding FAPE](#) and the [Individualized COVID-19 Recovery Services web page](#) for additional information about the provision of FAPE during the pandemic.

The Provision of Telehealth

Can Occupational Therapists provide Telehealth (or telemedicine) services as part of a child's education?

Yes. The Oregon Occupational Therapy Licensing Board allows for telehealth delivery of services. The Board defines telehealth at [OAR 339-010-0006](#):

1. "Telehealth" is defined as the use of interactive audio and video, in real time telecommunication technology or store-and-forward technology, to deliver health care services when the occupational therapy practitioner and patient/client are not at the same physical location. Its uses include diagnosis, consultation, treatment, prevention, transfer of health or medical data, and continuing education.
2. Telehealth is considered the same as Telepractice for occupational therapy practitioners working in education settings; and Teletherapy and Telerehab in other settings.

In addition, Telehealth services provided by a licensed Occupational Therapist or Certified Occupational Therapist Assistant must follow requirements outlined in [OAR 339-010-0006](#). They include requirements that OTs and COTAs:

- Exercise the same standard of care when providing occupational therapy services via telehealth as with any other mode of delivery of occupational therapy services;

- Provide services consistent with the American Occupational Therapy Association (AOTA) Code of Ethics and Ethical Standards of Practice; and comply with provisions of the Occupational Therapy Practice Act and its regulations.
- Prior to initiation of occupational therapy services, an occupational therapy practitioner shall obtain informed consent of the delivery of service via telehealth from the patient/client. The consent may be verbal, written, or recorded and must be documented in the patient or client's permanent health or education record.
- Secure and maintain the confidentiality of medical information of the patient/client as required by HIPAA and other federal and state and law.
- In making the determination whether an in-person evaluation or intervention are necessary, an occupational therapist shall consider at a minimum:
 - The complexity of the patient's/client's condition;
 - Their own knowledge skills and abilities;
 - The patient's/client's context and environment;
 - The nature and complexity of the intervention;
 - The pragmatic requirements of the practice setting; and
 - The capacity and quality of the technological interface.

Please also see the Oregon Occupational Therapy Licensing Board's guides [Telehealth and FAQ](#) and [Occupational Therapy in Schools](#) for additional information.

Can a Certified Occupational Therapy Assistant (COTA) provide services via telehealth?

Yes, provided they follow rules listed in [OAR 339-010-0006](#). See preceding Q&A.

Can an OT in another state provide services via telehealth to a student in Oregon?

An occupational therapy practitioner can only treat a patient or student in Oregon if they are licensed in Oregon ([OAR 339-010-0006](#)).

Can an OT with Oregon licensure provide services via telehealth to an Oregon-enrolled student who is temporarily located in another state? For example, can an OT with Oregon licensure provide services via telehealth to a student at a grandparent's house in Washington during the day while their parents are at work?

No. Current rule does not allow an Oregon-licensed OT to provide services via telehealth to an Oregon-enrolled student who is temporarily located in another state unless they are licensed in the state the patient or student is physically located in. OTs licensed in other states should refer to guidance from the applicable licensing board in that state.

Consent Related to Telehealth/Telepractice

Prior to initiation of occupational therapy services, an occupational therapy practitioner shall obtain informed consent of the delivery of service via telehealth from the patient/client. The consent may be verbal, written, or recorded and must be documented in the patient or client's permanent health or education record ([OAR 339-010-0006](#)).

If two OTs are providing services via telehealth to the same student, do they both need to obtain consent?

Yes. Consent is specific to each licensee.

If we can't get a response to our consent to telepractice, can OTs still provide materials for parents to work on with their child?

Consent is required prior to the initiation of the provision of services via telehealth. This does not prohibit an OT from providing resources to parents outside of direct therapy.

If an OT is uploading learning materials on an online platform, but not meeting with the student or family members (via phone, video conferencing, etc.), is consent required?

Same as above. Consent is required prior to the initiation of the provision of services via telehealth. This does not prohibit an OT from providing resources to parents outside of direct therapy.

What is considered consult in relation to telehealth and would necessitate consent?

As noted previously, the Board definition of Telehealth includes consultation ([OAR 339-010-0006\(1\)](#)). For practitioners working in the school setting, consultation is defined by the Board at [OAR 339-010-0050\(2\)\(b\)\(B\)](#): "Consultation is collaborative problem solving with parents, teachers, and other professionals involved in a child's program." Direct intervention is defined at [OAR 339-010-0050\(2\)\(b\)\(A\)](#): "Direct Intervention is the therapeutic use of occupations and activities with the child present, individually or in groups."

The Licensee should obtain consent if any of the services that are being provided meet the Board definitions of consultation and/or direct intervention. For further inquiries in regards to what activities may or may not be considered consultation, please contact the Board (contact information is provided at the end of the document).

When would a new telehealth consent need to be obtained?

Board rules are not specific in regards to this. School districts may choose to adopt policies to support proper and efficient documentation. Please note, school districts and EI/ECSE programs that bill Medicaid have additional telehealth consent requirements as per [OAR 410-133-0080\(13\)\(b\)](#): "Consent must be obtained and documented annually or with change in services on the child/students plan of care."

Additional Special Education Considerations

If a child is evaluated by our EI/ECSE program/school district and is found eligible for services in general, but an OT is not on the evaluation team, does the OT who will be the service provider need to complete an evaluation prior to offering services?

The answer is YES, the evaluation team cannot recommend OT services IF an OT is NOT part of the evaluation. As a licensed Occupational Therapy practitioner in the state of Oregon, you are required to complete an evaluation prior to treating a patient, per [OAR 339-010-0050](#). An OT must evaluate the child to make a determination if OT services are needed. However, an evaluation DOES NOT have to involve **formal** assessment: the OT could choose to do a file review of prior evaluations/assessments given, conduct a brief observation of the child, or request permission to conduct a formal assessment depending on whether or not there is sufficient data available to determine the need for OT services. The type of "evaluation"

conducted for OT services is at the discretion of the OT, not the evaluation team or the administrator.

How are OTs expected to document each goal and student progress? Are there forms available to use for documentation?

In regards to education documentation requirements related to an IEP/IFSP, [OAR 581-015-2200\(1\)\(c\)](#) requires “a description of how the child's progress toward meeting the annual goals will be measured and when periodic reports on the progress the child is making toward meeting the annual goals (such as through the use of quarterly or other periodic reports, concurrent with the issuance of report cards) will be provided”. OTs need to document progress towards meeting the annual goals in a manner consistent with requirements specified in the IEP in alignment with district policy and procedure and Board documentation requirements. OT documentation requirements are in [OAR 339-010-0050\(4\)](#). The board does not provide forms for documentation or recordkeeping.

How do OTs address the fact that sessions for telepractice are scheduled and students are not showing up?

This situation should be handled in the same way as you would if a student missed an in-person service. It is important to follow district policy, document your efforts, communicate with the student and family, and consult with the IEP/IFSP team if needed.

Privacy Considerations and Virtual Platforms

Are records created by medically-licensed staff providing health related services to students pursuant to an IEP/IFSP or Section 504 plan considered education records and thus, subject to FERPA privacy protections? Is this any different with Telehealth?

Family Education Rights and Privacy Act (FERPA) requirements apply to the information contained in student education records. FERPA does not specifically address online settings. It is important to note that records created during the provision of school health services, whether provided in-person or via Telehealth, are considered education records as defined by FERPA at 34 CFR § 99.2. However, in regards to Telehealth, there are HIPAA security implications because the health services are provided via an electronic platform.

See [Student Privacy Considerations and Remote/Online Education Platforms](#) and [Joint Guidance on the Application of the Family Educational Rights and Privacy Act \(FERPA\) and the Health Insurance Portability Act of 1996 \(HIPAA\) To Student Records \(December 2019 Update\)](#) for more information about FERPA, HIPAA, and digital privacy.

Can I use Skype, Zoom, or Google to provide OT telehealth services?

It depends. There are multiple factors to consider when using telehealth technology. The Office for Civil Rights (OCR) at the Department of Health and Human Services (HHS) is responsible for enforcing certain regulations issued under the Health Insurance Portability and Accountability Act (HIPAA). Telehealth services are subject to HIPAA requirements for security, transmission, and confidentiality. Compliance with HIPAA requires that covered entities have appropriate administrative, physical, and technical safeguards in place and that they have reasonably implemented those safeguards. See the [HIPAA Security Series 101](#) for more information.

However, during the COVID-19 national emergency, which also constitutes a nationwide public health emergency, OCR will exercise its enforcement discretion and will not impose penalties for noncompliance with the regulatory requirements under the HIPAA Rules against covered health care providers in connection with the good faith provision of telehealth during the COVID-19 nationwide public health emergency. Covered entities seeking to use audio or video communication technology to reach patients where they live can use any non-public facing remote communication product that is available to communicate with patients.

To that end, OCR will temporarily allow providers to use applications such as Apple FaceTime, Facebook Messenger video chat, Google Hangouts video or Skype. The agency also specified that Facebook Live, Twitch, TikTok, and other public-facing video communication **should not** be used in the provision of telehealth.

Despite this temporary relaxation of rules, OCR does note that healthcare providers should notify parents that such third-party apps may pose privacy risk. In addition, providers should enable all available encryption and privacy modes when using such applications.

See [Notification of Enforcement Discretion for Telehealth Remote Communications During the COVID-19 Nationwide Public Health Emergency](#) for the complete release. OCR has also published an [FAQ](#) related to this change.

School Medicaid Billing

Can school districts bill Medicaid for school health services (SLP, OT, RN, PT) provided via telehealth?

Yes. A school district may bill Medicaid for health services provided to a student pursuant to their IEP or IFSP delivered in person or via telehealth when these conditions are met:

- a. A school district must be an enrolled as a School Medical provider
- b. Student must be an actively enrolled Medicaid recipient
- c. Service must be identified on the student's IEP/IFSP
- d. A school district must obtain informed written consent to access students benefits
- e. Health service delivery must be aligned with Licensing Board requirements, including documentation.
 - i. Documentation must include the fact the service was provided via telehealth.

Documentation of attendance is a critical component of service provision and is required for Medicaid billing. In order to align with Medicaid documentation requirements and to mitigate audit risk, when documenting service provision, OTs should document their location, the location of the student, the therapy provided, and the service delivery method (in-person or via telehealth). In the event that a Certified Occupational Therapy Assistant is providing the service, documentation of supervision by the supervisor and their location must be maintained as well. Please see OHA's [Telemedicine—Telehealth Guidance for School-Based Health Services Providers](#) for additional information.

Please note: Current Board rules do not require documentation of the location of the Occupational Therapist/Certified Occupational Therapy Assistant and student, though it may be best practice.

Future Updates

This document will continue to be updated based on:

- The continuing impacts of COVID-19 and the State's evolving mitigation efforts as directed by Governor Brown and the Oregon Health Authority.
- Input from educators, students, families, and community partners.
- Updates from federal partners.
- An ongoing review of equity impacts.
