- Identify the source of stand inventory information. Use the following codes: M = Measured SLI data, I = Imputed SLI data, P = Pre-Cruise Plots, O = other (if other, describe below).
- Net Acres have been rounded to the nearest whole acre in this table. Stand that comprise less than one acre of a harvest unit are not reported in this table, so the total "Net Acres" per unit in this table may not equal the total "Net Acres" per unit in table 1.

- These stands were planted. The majority of Unit 1 was previously thinned in 2013 (southeasternmost 81 acres). In Unit 2, only the tractor ground (16 acres) was previously thinned in 2013. The remainder of both Units have no record of pre-commercial or commercial thinning.

- **Leave Tree Considerations:** Foresters will work with Wildlife Biologist during sale layout. The following should be considered when determining final leave tree arrangements.
  - **Stand Characteristics:** Prioritize larger diameter trees and minor species within each unit as part of the retention strategy.
  - Work with Reforestation Unit during sale layout for leave tree arrangement. Reforestation Unit recommends leaving trees on mid-lower slopes to help with method of vegetation control.

**Table 6. Reforestation**

Unit	Planting Species Mix (%)*	TPA*	Considerations (ex. Elevation, SNC, Aspect, Animal Damage)
1	80% DF/10% WH/ 10% NF	400	Elev. 1620-2290/Behind Locked Gate/Big Game/Mt Beaver/Steep Rocky Terrain/Competing Vegetation i.e. vine maple, huckleberry/Leave Tree Arrangement

\* These are estimates for planning purposes and will be adjusted as needed based on site conditions during implementation.

- **Reforestation Considerations:**

- **Animal Damage:** Bud capping planned. Area known for big game and Mountain Beaver damage
- **Seedlings:** Higher mix of plugs due to rocky site conditions. Plant NF at higher elevations
- **Brush:** Brush control will be determined after harvest, aerial application is planned.
