- a. Identify the source of stand inventory information. Use the following codes: M = Measure SLI data, I = Imputed SLI data, P = Pre-Cruise Plots, O = other (if other, describe below).
- b. Net Acres have been rounded to the nearest whole acre in this table. Stand that comprise less than one acre of a harvest unit are not reported in this table, so the total "Net Acres" per unit in this table may not equal the total "Net Acres" per unit in table 1.
- c. This unit is an uneven aged stand that is comprised of trees that range from 25 to 125 years old.

Unit	Harvest Type	Harvest Species	Residual			
			Species	TPA	BA	% SDI
1	PC-R	PP, DF	PP, DF	50	80	--

- Prescription Considerations:**
 - Harvest in this area is intended to reduce stocking levels while retaining the uneven aged characteristics of the stand. Trees will be individually selected for removal across all age classes. Group selection cuts were incorporated into the previous harvest prescription in these stands and are not expected to be increased this entry.
- Reforestation Considerations:** Post-harvest the understocked areas will be planted with ponderosa pine and Douglas-fir if needed. The remaining stand will be grown forward with another entry anticipated in approximately 20 years.

V. HARVESTING AND ACCESS CONSIDERATIONS:

Table 5. Harvest System and Access Summary

Unit	Harvest System		Slope (%)	Area Access	Seasonal Access
