

BURNING & SMOKE MANAGEMENT

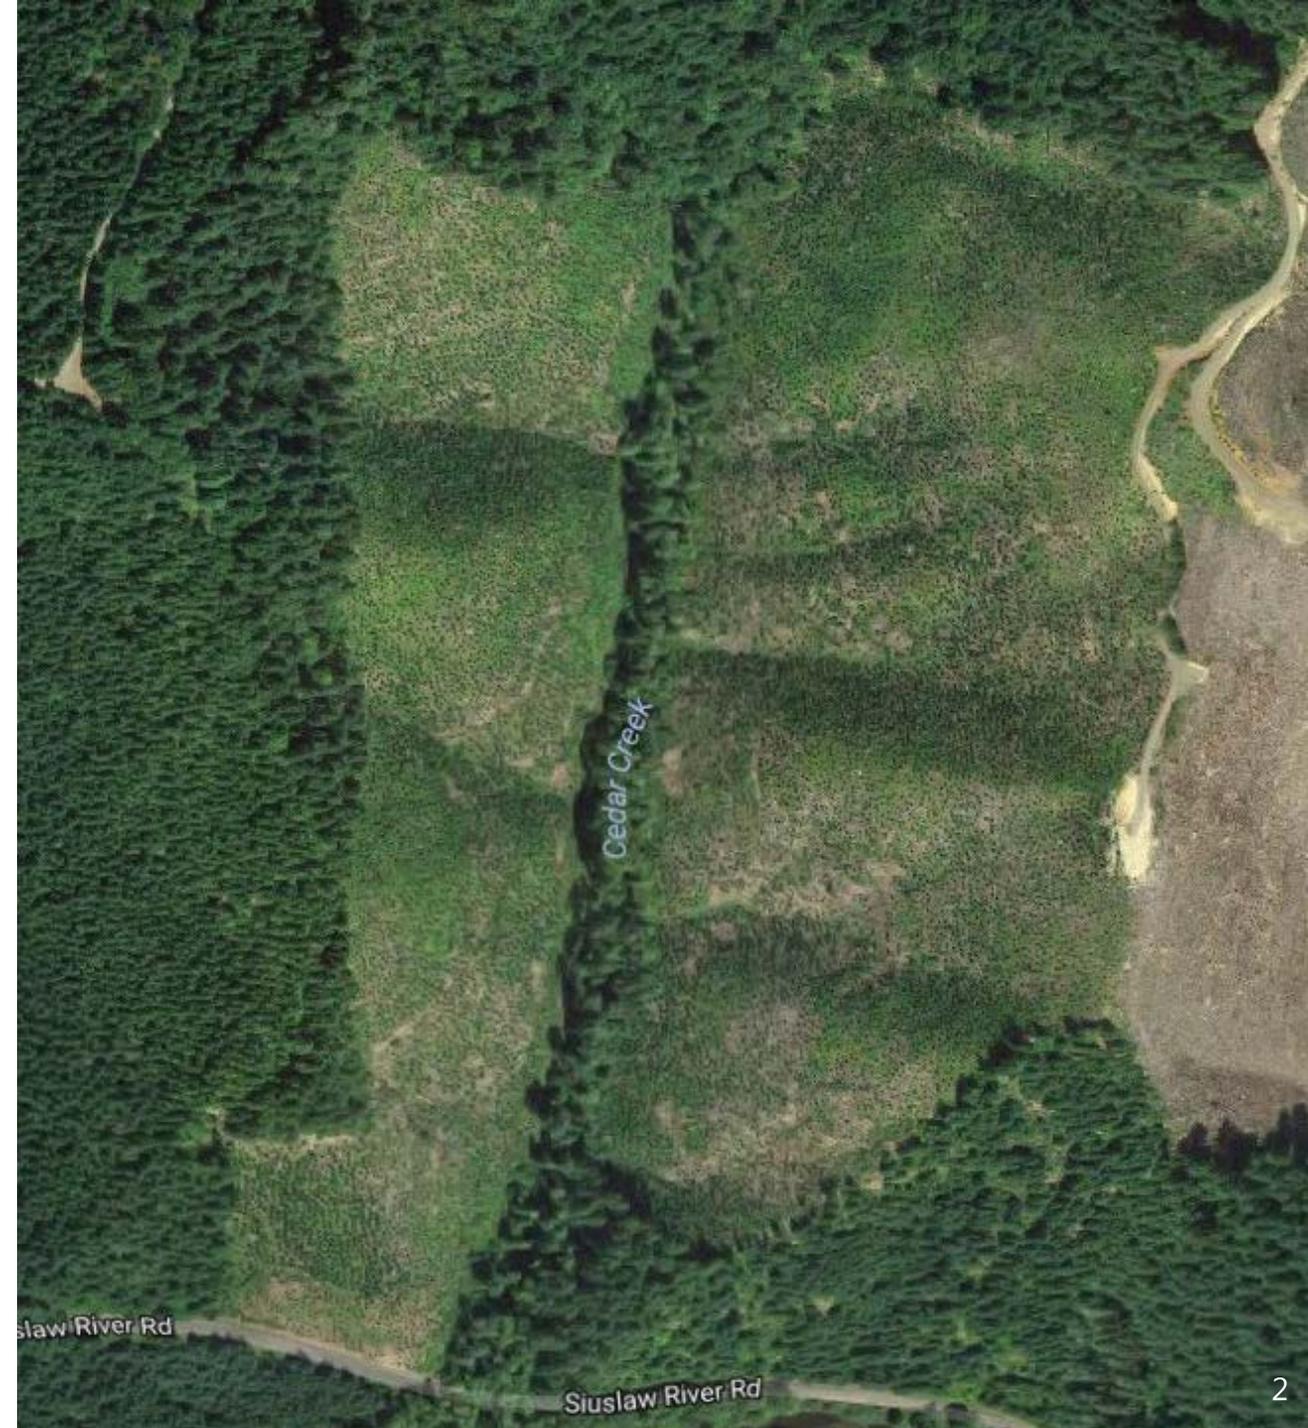

NOV 2ND, 2017

INTRODUCTION & HISTORY

The Need to Burn

Prescribed burning helps to restore the health and wildfire resiliency of Oregon's forests.

Smoke Management

Since 1972, the Oregon Department of Forestry has regulated forestland burning under the Oregon Smoke Management Plan.

Large wildfires usually occur in summer when weather conditions often trap smoke in populated valleys for extended periods of time.

Wildfire VS Prescribed

Prescribed fires reduce forest fuel hazards and can be conducted/controlled to minimize smoke impacts on local communities.
