Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Charles Reindl

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

lyric apted

[You don't often get email from jared@magiclogicstory.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear ODF Staff,

I am submitting my comments on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state Like most Oregonians, I care about our state forests for what they provide beyond timber: thriving fish and wildlife, cold clean rivers, recreation, and the scenic places that define this state.

For too long, state forest management has been out of balance—tilting toward industrial-scale clearcutting and timber revenue at the expense of the full range of public values these forests are supposed to serve. The draft Forest Management Plan is a chance to reset that balance by putting ecological forest management first: restoring ecosystems, improving water quality, and supporting the recovery of species that have been pushed to the brink by decades of industrial forest practices.

It's also time for real accountability. For more than a decade, ODF has not met the intent of its own rules and the key performance measures adopted by the Legislature that call for protecting and increasing older, mature forest conditions. Going forward, ODF needs to manage state forests in line with the rules and policies already on the books. The draft plan is where that shift should begin.

To restore balance and make the plan credible, I urge you to revise the draft FMP in the following ways:

1) Make "best available science" a clear requirement.
Include explicit language that management actions must be guided by the best science available, consistent with existing law.

2) Build compliance and accountability into the plan.
Amend the FMP to require adherence to applicable laws, policies, plans, and performance measures adopted by the Board of Forestry and the Legislature, and incorporate those requirements into the plan.

3) Don't structure the plan to prioritize logging by default.
Delete or revise Principle 3. Requiring timber revenue to fund all state forest management locks in an imbalance and continues to elevate harvest over other public values—contrary to the intent of state forest management.

4) Protect and rebuild mature forest conditions on the North Coast.
Stop clearcut harvest of complex, layered forest stands on North Coast state forests until at least 30% of the forest is in this condition, as current rules and policies require.

5) Take water quality seriously—at the watershed level.
Develop management and restoration plans for watersheds with impaired water quality, and restore water quality to levels that support salmon and other aquatic species within 10 years.

6) Treat climate resilience as a core objective, not a side note.
Add strategies that implement the Climate Change and Carbon Plan: move to longer harvest rotations, reduce reliance on large-scale clearcutting, and establish a carbon market program for state forests.

7) Commit to recovery of threatened and endangered species—not just avoiding extinction.
The HCP is an important step to prevent local extinction of imperiled fish and wildlife, but it does not deliver

recovery. The FMP should include additional, specific strategies to contribute to recovery of the 17 imperiled species currently hanging on in our state forests.

Thank you for taking these recommendations seriously. Oregon's state forests are a public trust, and this plan should protect them in a way that reflects what Oregonians value—so these forests remain healthy and resilient for our kids and future generations.

Sincerely,

Jared Cruce

You don't often get email from hunterlgrove@gmail.com. Learn why this is important

Hello,
My name is Hunter Grove and I am a proud Oregonian and avid enjoyer of our beautiful forests, especially our majestic old growth and mature forests. I grew up in the foothills of Mt Hood, and studied conservation science at Oregon State University, and as an informed and connected citizen, I am deeply concerned about many aspects of the proposed Forest Management Plan.

To protect and restore balance to our state forests, the draft Forest Management Plan (FMP) should be amended in the following ways:

- **The FMP must be based on the best science available:** Add a requirement for all actions to be based on the best science available, as required under existing law.
- **Require accountability:** Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
- **Bring balance back to state forests:** Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
- **Restore healthy mature forests:** Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- **Ensure clean healthy waterways for salmon and communities:** Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
- **Fight climate change and build climate resilience:** Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
- **Commit to the recovery of threatened and endangered species:** The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests

Thank you very much for your time
--
With Gratitude,
Hunter Grove

The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Megan Herberger

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Diego Navarro Garibay

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I live in Salem and do a lot of activities on federal and state lands. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Mariah Rendon

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Mature forests are extremely important for carbon capture, temperature and moisture control, habitat, and the overall

beauty of our state. It is not just trees that grow in these forests but a complex ecosystem essential to the continued existence of our planet. These beautiful and fundamental forests need to be protected now, before it is too late.

I appreciate your time and consideration of more sustainable forestry practices that would only benefit Oregonians in the long run.

Sincerely,

Eva Tomlinson

[You don't often get email from alixpowell@outlook.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Alexandra Powell

You don't often get email from paulschlegelmann@gmail.com. Learn why this is important

Hello,

The following are my comments regarding the proposed Forests Management Plan:

1. Prohibit all clearcutting. Clearcutting has many negative aspects including the destruction of forest ecosystems and the associated flora and fauna. It also increases the risks of soil erosion and sedimentation into nearby water bodies (harming aquatic wildlife). It also removes carbon sinks, provokes slides, interferes with the water cycle, etc.
2. Prohibit logging of mature and old-growth trees (e.g. no logging of trees 75 years or older). These mature forest contribute significantly to habitats for native plants and animals, are huge carbon sinks, contribute to excellent water quality to nearby communities, provide outstanding recreational space, etc.

Thank you
Paul Schlegelmann

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. I am dismayed that we need to even state what seems to me to be a self-evident truth. Leave the waterways and old growth, already, and halt clear cutting our forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

M Conley

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Michael Taylor

Subject: Comments on the Draft Forest Management Plan
Date: Wednesday, January 14, 2026 1:47:15 PM

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

As a lifetime resident of Oregon, I have visited most parts of our wonderful state. The large reduction of our forests is alarming.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Dear ODF Staff,
One of my main concerns is the global warming that is already damaging our forests by Ashland.
Will we lose our Doug firs?
Do we need to start planting trees that will withstand more heat and less moisture?
And please no clearcutting.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Josh Woolley

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

sydney Mings

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

You don't often get email from sffoss@gmail.com. Learn why this is important

To the Oregon Board of Forestry:

I am an avid birder and hiker and greatly value our state forests. I hope you will keep these recommendations in mind during your process.

To protect and restore balance to our state forests, the draft Forest Management Plan (FMP) should be amended in the following ways:

- **The FMP must be based on the best science available:** Add a requirement for all actions to be based on the best science available, as required under existing law.
- **Require accountability:** Amend the draft FMP to require compliance with applicable laws, policies, plans, and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP to ensure transparency.
- **Bring balance back to state forests:**Delete or amend Principle 3 in the draft FMP. This principle currently requires revenue from timber harvest to fund all management activities, which continues to prioritize logging over all other forest values in violation of state law.
- **Restore healthy mature forests:** Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests achieve this condition, as required by current rules and policies.
- **Ensure clean healthy waterways for salmon and communities:** Develop forest management and restoration plans for watersheds with impaired water quality. These plans should aim to restore water quality to levels healthy for salmon and other aquatic species within ten years and ensure safe drinking water for our communities.
- **Fight climate change and build climate resilience:** Add specific strategies to implement the Climate Change and Carbon Plan for state forests. This must include shifting to longer rotations between harvests and reducing reliance on large-scale clearcutting.
- **Commit to the recovery of threatened and endangered species:** While the Habitat Conservation Plan (HCP) is a necessary step to prevent local extinction, it is not enough for full recovery. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species currently struggling to survive in our state forests.

By incorporating these changes, Oregon can ensure its state forests provide ecological, economic, and social benefits for generations to come.

Sincerely,

Stephen Foss
Eugene, Oregon

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Liz Hardesty

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Ezzz S

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Aspen Bernier

[You don't often get email from ryanneseven@hotmail.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Good evening,
Thank you for your time. My name is Megan Holmes. I was born and raised in Eugene Oregon, and recently moved back to the area for graduate school. I have a family and business here in Oregon and the Oregon forests are important to my family for the lush environment, clean air, clean water, and recreation.
I'm a child of the 80s, and as a child, I remember celebrating when 'clear-cutting' practices were banned. In recent years, I have been horrified by the vision of clear-cut hillsides all up and down the 1-5 and through the backcountry. I thought the practice was outlawed decades ago because of its known impact on wildlife, erosion, and watersheds. Native species can NOT recover without the shade and protection of mother trees. When the ridgelines are cut, we know that the 'fog broom' that pulls moisture from the clouds is disrupted and incredibly hard to re-establish. Planting new monoculture trees in clear-cut lands is not a responsible, efficient or sustainable way to manage our forests. They are NOT the same.
For two decades, my partner and I have celebrated his birthday in February with a trip to the Oregon coast, but 2 years ago, the clear-cutting of huge swaths of trees between Highway 101 and the ocean has made that drive too dangerous. Not only is the drive up 101 ugly because of the clear cuts, but the erosion makes those hillsides unsafe. Only a very narrow strip of trees – maybe 3 trees thick was left next to the highway. In 2024 those few remaining, spindly trees newly exposed to the high winds from the ocean were blowing onto the road and twice trees literally exploded in front of the car carrying my partner, my son and mother in law. We don't go to the coast in the winter anymore because the logging practices have made that road unsafe.
I am aware that the Trump Administration has put tremendous pressure on the ODF to up the number of log feet that is harvested, and I hear that you have met and actually EXCEEDED those limits. For our children, grandchildren and great-great-grandchildren, I beg you to push back. Carbon caps on industry and electric cars may reduce CO2 pollution and slow the heating of our atmosphere, but we know that there is only ONE thing that actually COOLS the planet. Trees. Carbon is only responsible for about 4% of global heat dynamics. The other 75 to 90% is water, and that means trees. Every tree is essentially 2 air conditioners for the planet. They shade the bare earth from absorbing the sun's rays, and their evapotranspiration moves heat from the surface to the upper atmosphere. Mature, healthy forests actually create low-pressure zones drawing maritime moisture inland. Trees also release hygroscopic microorganisms into the air which form more than 50% of the condensation nuclei for clouds. Yes, trees literally call and create the rain, stabilizing a healthy flow of water inland.
If you must harvest timber, please do it in small patches of a few acres or strips that can be shaded by strong, healthy trees. In the shade, snow can last longer into the spring, hydrating the forests longer into the summer and preventing disease and wildfire. Groves of mature trees give refuge to wildlife and protect the native plants in the understory so they can return when the cut areas are replanted. The roots of the trees left behind provide stabilization on steep slopes and stop erosion that is devastating watersheds, drinking water, and fish runs all over the state. The current timber harvesting practices are putting human lives in danger right now and breaking the biotic pump that is responsible for circulating water and heat in our atmosphere. Our climate depends on mature, diverse, healthy forests. Please protect our trees and harvest only what is needed responsibly. No more clear-cutting! We are Oregonians. Let's show the rest of the world what regenerative forest practices look like. Thank you for you time.

Megan Holmes

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Anne Adams

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Sheila Young

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

Gail Bill I've learned somewhere my timberland for over 50 years I've owned some of my timberland for over 50 years some has been thin 19 times I was born in the steam logging the 1932 Corvallis login company Corvallis login company Herbert no George gerlinger girlinger dad was a logging superintendent so is his dad still Blackburn

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Madison K

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

As an outdoors person and a conservationist, I greatly value the opportunities that we have to reorient management of our state forests towards the needs of Oregonians. I run, hike, and fish in the state forest. I love getting out in the landscape with my dog, and exploring this nearby, but less recreationally developed part of our public lands. I also appreciate the opportunity for Oregon to grow forests that will mature into old growth, providing clean water, valuable habitat for endangered species and carbon storage as we grapple with the climate crisis. The Forest Management Plan could allow us to lay the groundwork for state lands with more recreation opportunities and better functioning ecosystems.

By statute, the state forests are to be managed for their greatest permanent value, which encompasses their ecological values in addition to the monetary value of timber sales. However, ODF is historically oriented towards getting the cut out. It's easy to measure whether they agency is meeting its logging goals, but the accountability is lacking when it comes to conservation goals. For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures, specifically KPM #10 that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To establish accountability for conservation on state forests, I urge you to make the following amendments to the draft plan.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP. It is rumored that ODF will seek to get rid of KPM #10, but this is a huge backward step in transparency and accountability. Because this is a KPM, ODF needs to report to the legislature every year on how it is meeting, or failing to meet, this operational requirement. Without this requirement we will not get the information from ODF about the overall loss or gain of mature forest.

Since KPM #10 has not been satisfied, and ODF has not made significant progress towards satisfying it, stop all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition. The department cannot seriously say it is trying to increase the amount of layered and complex forest while planning timber sales that consist of almost exclusively layered and complex forest.

Address degraded rivers within state forests, and include plans to assess and restore watershed health for endangered salmonid species.

Use these forests as part of our fight against climate change. ODF adopted a Climate Change and Carbon Plan several years ago, but has done little to implement it. This plan should be incorporated into the FMP through longer rotations between harvest, and reduced reliance on large-scale clearcutting.

Include measurable criteria to judge the progress toward recovering endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

If real metrics for conservation are not included in the FMP then it is not a functional plan. I would urge the Board of Forestry and the State Forester to reject any FMP that does not include measurable criteria for progress, success, and failure on conservation goals for endangered species habitat, more even age-distribution of the state forest, clean water, and carbon storage in the state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

Felice Kelly

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Rebecca Oetken

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Andrew Simrin

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Bruce Burkey

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Marie Murphy

The WiZaRd

Personal Note:

I used to live on the OR
coast about 40 years ago
where it's beautiful and green all-year-round...

instead of cutting down every tree you see,
grow hemp instead, as hemp is more durable
and sustainable for multiple purposes:

1. A reliable resource that's more durable
for construction of homes, schools, and businesses
than your traditional wood from trees.

2. A good source of protein in plant-based products.

3. An excellent source in textiles that doesn't
involve animals and other materials that would
cause health trouble in some people.

4. Hemp also has certain medicinal properties
as an effectve treatment and/or cure for illnesses
as opposed to all the junk that Big Pharma
is putting out (that only causes people to become more sick or worse) and using the same old gimmicks and PR spins in their slick
(and misleading) advertising.

Trees are essential to all life on Earth.
As Floyd "Red Crow" Westerman(1936-2007)
summed it all up in his wisdom:
"We have the same DNA as the tree...
We breathe is what the tree exhale
while the tree takes in what we exhale..
And so we have a common destiny with the tree".

Without trees, we would have no oxygen
nor clean water and without oxygen and clean water, all life on Earth would cease to exist.
'Cause the water is sacred.....The air is sacred.
All life on Mother Earth that was brought forth
by God/Great Spirit, is sacred...
And desecration or destruction of Creator's
beauty and purpose will lead to an economic
downfall (stemmed from boycotts).

It would be wise to give up this ungodly
clearcutting project and learn how to walk
in beauty with God's/Great Spirit's creation.

People and planet is far more important than profits!
Anybody who thinks or says otherwise,

are in cahoots with the Devil!!

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Nancy Hardy

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I support changes in the Draft Forest Management Plan that will consider and strongly support values other than industrial clearcut logging.

Balanced management will actively protect older forest stands, will support other values than enhancing revenue at the expense of forest health, will work for clean water and air, healthy streams that support salmon and other aquatic wildlife, that will protect habitat for all beings that depend on a healthy environment--NOT clearcuts!!!--to thrive, including humans, who need space for re-creation and all that that means in a world in crisis.

We should be protecting our forests for future generations, not leaving them dead zones and tree plantations.

Sincerely,

Andrea Scharf

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

John Altshuler

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Oregon is a very special state largely because of it's beautiful forests and streams. One of my great fears with the current federal administration is that they would think very short term, seek ST profits and be reckless or noncaring with the land we love and value for it's unique beauty. Please stand strong and resist the cutting of forest and development of land that our long ago governor was wise to resist. It cannot be restored once it is gone. The clear cutting I can see from our home has gone too far. It makes me sad.
And I know that my neighbors feel the same. I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. Yes, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. I will follow the draft letter from now on since I cannot improve it. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. I distinctly remember asking my parents every time we drove from Salem (where I grew up) to the coast or to Central Oregon things like: "Why do we have to pass through such ugly areas? Why were all the trees cut down? Why aren't the forests replanted faster? Why didn't someone do something about all the dirt coming down because all the trees are gone?" And so on.... Our kids notice when the landscape is scarred or doesn't look "right." We deserve better management practices to preserve the beauty, water quality, ecological diversity, and resilience offered by properly cared for native habitats.

The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Jean Wyman

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Eric Nylen

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Kevin Goodwin

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Melba Dlugonski

The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Matt Reynolds

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. While I did not grow up here in Oregon, my love of nature as a hiker and trail runner has only intensified thanks to the amazing forests here of truly towering trees.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Ms Courtney

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. [You don't often get email from mizdclark@gmail.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Kate Skinner,

I am a 40-year resident of Linn County, a small-farm owner, a retired scientist, and a mother and grandmother. As a lifelong hiker, I advocate for responsible environmental stewardship—protecting our natural world through sustainable practices to ensure both ecosystem resilience and human well-being.

1. The draft Western Oregon State Forests Management Plan (FMP) must be amended to reconcile it with existing law. The plan must explicitly mandate that all management activities follow applicable laws, rules, and policies to ensure the long-term stewardship of our state forests:

- Require all management actions to be based on the best available science, as required by law.
- Amend or delete Principle 3 that would require timber revenue to fund all state forest management activities, illegally prioritizing logging over other protected public values.
- Stop all clear cut timber harvest of complex-layered (mature) forest stands in North Coast state forests until a minimum of 30% of the forests are in this condition as required by current rules and policies.
- Explicitly require compliance with all applicable laws, policies, plans, and key performance measures adopted by the Board of Forestry and the State Legislature

2. To restore climate stability and build climate resilience the FMP should add strategies to implement the "2021 Climate Change and Carbon Plan", which elevated carbon sequestration to a core objective alongside traditional goals like timber revenue. Prioritize conservation of mature and old-growth stands as they store significantly more carbon than young plantations. While young forests have a higher rate of annual sequestration, old-growth forests have a vastly superior volume of total storage.

Recently the Oregon Department of Energy released a new "Land-Based Net Carbon Inventory" report that outlines the greenhouse gas emissions and carbon removals across Oregon lands, including forests, grasslands, croplands, developed lands, wetlands, and biomass burning, which includes wildfires and prescribed burns. Data analysis from 1990 to 2024 estimates that Oregon's land is an overall carbon sink. Forest lands provide the greatest benefit, or highest amount of carbon removals, among the land types.

Thank you.

Deborah Clark

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

A Owen

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

1. Create a forest management plan that enforces the requirement that halts clearcutting of complex layered forest stands until 30% of State forest stands are complex layered.

2. Develop restoration and management plans to clean up impaired quality watersheds with in 10 years.

3. Implement the Climate Change and Carbon Plan for state forests. Require longer harvest rotations, reduce large-scale clearcutting, and establish a carbon market program.

4. Research the best science available to inform policy decisions. OSU has premier global researchers and scientific data.

5. Restrict most logging in the Coast Range which is the most efficient carbon capture ecosystem on the planet.

6. Remove current Principle Three in the FMP draft with the built-in conflict of interest to rely on logging revenue to fund the ODF thereby preventing independent scientific decisions of future policy makers. The ODF exists to protect our magnificent forests and ecosystems. Do not be subservient to the timber industry.

7. Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry
or the state legislature. Incorporate these by reference into the FMP so they’re enforceable.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Pamela Brocious

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Joan Waddell

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Patti Mickelsen

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Jennifer Herz

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. I hike in many of Oregon's State forests, it's one of the great things in life in my opinion.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas.

Mankind has a way of thinking it knows what is best in terms of profiting from nature. Then we mess things up. Then we think we can fix that. Then we mess up again. Can't we just take a pause and let nature breathe. Let nature show us that it can recover and thrive better without our "logic". Our forests and wildlife are the last good thing we have left, please take good care of them by leaving them alone. Nature is a complex system that we are not able to replicate or regulate, even though in our haughty ignorance we convince ourselves that we can.

Thank you,

Sincerely,

Crystal Tolmie

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

don gaines

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I love Oregon forests, mountains, desert and coast very much, and we need to protect our wilderness and older forests like never before. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been way out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has sadly ignored requirements of its rules and legislatively adopted key performance measures that require highly valuable protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

* The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

* Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

* Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

* Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

* Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 years.

* Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

* Commit to the recovery of threatened and endangered species. Protecting these species helps protect all species, even us, and not just the threatened or endangered ones. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

Peter Brewer

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,
Mary Lou Emerson

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Colleen Skjerven

[You don't often get email from skyekimel@gmail.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear ODF Staff,

In addition to the standard comments below, I beg you to manage the forests for the forests and rivers and wildlife not for money or resources, but as intrinsically valuable to the earth. The forests have as much right to life as any living being. If we can't begin to see the value of intact environments outside of monetization and natural resources, do we have a future?

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local

extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Kathy Bell

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Oregonians value forests for their own sake. Management practices have favored practices such as clearcutting. This must end. Please make the following amendments to the draft plan:

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amending Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Commit to the recovery of threatened and endangered species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of 17 endangered species.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Vicki Schwab

You don't often get email from emmagrace98@gmail.com. Learn why this is important

Hello,

My name is Emma. I moved to Eugene after growing up on the east coast, and let me tell you – Oregon's abundance of forested public lands is a rare treasure. There are so few places in our country where you can even *glimpse* something truly wild like you can here. With such a privilege, we have a responsibility to steward these forests with care, in a way that protects wildlife and their home.

I urge you to amend the draft plan to **require all actions to be based on the best science available, and to comply with applicable laws, policies, plans, and key performance measures adopted by the Board of Forestry or state legislature**. There a a lot of policies and laws already in place that, if followed, would greatly improve our state forest health and better protect native species, but, unfortunately, many of them are being completely ignored.

For example, **current rules and policies require a minimum of 30% of state forests be in "mature" condition, but as it stands, only around 14% are in this condition**. Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests until this minimum is met.

We *need* to bring balance back to our state forests. **Delete or amend Principle 3 in the draft FMP**. It currently requires revenue from timber harvest to fund all of state forest management activities, creating a backward incentive and continuing to prioritize logging over all other values in state forests.

Add strategies to implement the Climate Change and Carbon Plan for state forests, like shifting to longer rotations between harvest and reducing reliance on large-scale clearcutting.

Finally, I urge you to **commit to the recovery of threatened and endangered species by including *specific strategies*, in addition to the HCP, to contribute to the *meaningful recovery* of the 17 imperiled species that rely on our state forests for survival.**

Thank you for the opportunity to comment on how Oregon will manage its forests for the next decade and impact the land, ecosystems, and communities for generations beyond.

Emma Bartlett

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Susan Wilcenski

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Ainsley Arend

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I don't live in Oregon anymore, but I grew up hiking and enjoying the wilderness in Oregon. I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

It's past time to change course: stop clearcutting our precious legacy forests, and focus on improving water quality.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

Judith Eda

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Patrick Grady

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Teresa Hensley

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Shirley Jackson

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Shawn Martin

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Maureen O'Neal

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

As you can see by my zip code, I don't live in Oregon. However, I grew up on the west coast and loved visiting state forests in California and Oregon with my family. Your state is so fortunate to have such beautiful wild spaces. I suspect their existence, in their natural state, bring revenue to local businesses over time. Please don't sacrifice that for the quick buck.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Betsy Reed

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Jamie Shields

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

David Sweet

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Mark Wheeler

Oregon Board of Forestry

Draft Forest Management Plan

January 25, 2026

My name is Cheryl Johnson and I am a 50 year resident and rural land owner in Clatsop County. I am a retried public school librarian and my husband and I raised a son and a daughter here.

We have been neighbors to Oregon State Forestry for over five decades as our back property is adjacent to ODF land. I have major concerns about the draft Forest Management Plan. **Please amend the current draft to include policies which:**

- **Base decisions and plans on best science available.**

Not merely a suggestion or lip service. The FMP needs to be amended to include the REQUIREMENT that all actions are based on best science available.

- **Promote healthy watersheds for clean drinking water and healthy habitat for salmon.**

With long-term protection of the watersheds we ensure clean drinking water for future generations. And we protect salmon and other native fish by designating areas that won't be clear-cut in the future. Our home is within walking distance of the Columbia River and we are keenly aware that there are currently 13 species of salmon that are threatened or endangered on the Columbia River. State, federal and private organizations have been pouring millions of dollars into restoring salmon runs and we cannot endure any further loss of habitat.

The current draft FMP must be amended to include long term protection of watersheds and restore water quality to levels which will ensure clean and abundant drinking water for my grandchildren and healthy habitat for salmon.

- **Bring back balance to state forests.**

The policies of the past which balanced harvesting with consideration for clean water, fish habitat and recreation were turned on their heads in 2010. At that time the Board of Forestry significantly increased the goals for clear cutting and decreased the goals for mature forest.

Our neighbors and friends make their living in the timber and fishing industries and we appreciate and respect these traditional livelihoods. A balanced approach is needed which will sustain these jobs while not prioritizing logging over all other values in OUR state forests.

My husband and I are lucky enough to have 3 grandchildren living in Clatsop County. The Oregon State forests belong to ALL of the people of Oregon, and we are committed to ensuring a healthy forest legacy for our grandchildren and all future generations. We urge the Oregon Board of Forestry to move forward with significant changes to the draft FMP

TO: Interim State Forester Kate Skinner
FROM: Candace Bonner
RE: Comments on the Draft Western Oregon State Forests Management Plan
DATE: January 31, 2026

Dear Interim State Forester Skinner:

Thank you for the opportunity to comment on the Draft Western Oregon State Forests Management Plan (FMP.) I have read the comments submitted by the State Forest Coalition and would like to endorse their commentary.

I would like to provide some additional comments as a small forest owner who lives on forested land, as do most of my neighbors. My overwhelming concern in terms of management of our State public forests is that they be managed to maximize mitigation of climate change. Climate change is here, is an emergency, and our forests are the most powerful immediate tool we have for mitigation. For many climate change feels like an immediate threat only when they are personally affected by wildfire, flood, severe heat or cold, windstorms, etc. For those of us who spend time in the same forest every day, there is tangible evidence of the progression of climate change every one of those days.

Is it possible for ODF to provide us with a quantitative baseline of our state forests in terms of climate mitigation, then model how these numbers will change over the decades if we design a Forest Management Plan with the only priority being mitigation of climate change? Numbers such as carbon storage below and above ground, CO2 drawdown, water quality and quantity, distribution of tree size and age, optimal wildlife habitat both land and riparian, effects on local ambient temperature and precipitation, acres of well-shaded forest available for human recreation, expected emissions from machines, etc. And for each proposed action under an FMP which includes other priorities, particularly timber harvest, generate these same numbers and how these numbers can be projected to change over the decades. That would make it easier to see what we lose or gain in terms of climate change with each proposed set of actions. As climate change progresses and accelerates, and we become more desperate, making appropriate changes through adaptive management would also be easier with this information.

Thank you again for the opportunity to comment.

Respectfully,

Candace Bonner

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Victoria Cummings

Subject:	Please prioritize mature forests in the Draft Forest Management Plan
Date:	Thursday, January 29, 2026 12:08:04 PM

[You don't often get email from richie.scott@sierraclub.org. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Richard Scott

Subject: Stop clearcutting older legacy forests, improve water quality and take climate action now -- OAR 629-035: Northwest Oregon State Forests Management Plan, Southwest Oregon State Forest Management Plan and the Elliott State Forest Management Plan

To Interim State Forester Kate Skinner:

Thank you for the opportunity to comment on the draft Forest Management Plan (FMP) for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the Oregon Department of Forestry (ODF) has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

- **The Forest Management Plan must be based on the best science available**:
  Add a requirement for all actions to be based on the best science available, as required under existing law.

Require accountability:
Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

- **Bring balance back to state forests:**
  Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.
- **Restore healthy mature forests:**
  Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- **Ensure clean healthy watersheds for salmon and communities:**
  Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 years and support safe drinking water for communities.
- **Fight climate change and build climate resilience:**
  Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek's Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
- **Commit to the recovery of threatened and endangered species:**
  The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the ***meaningful recovery*** of the 17 imperiled species clinging to survival in Oregon's state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely,
Christopher Lish

WE OWN LAND THAT WAS IN THE "SWEET CAEEK FIRE" 4 PLUS YEARS AGO.

Problem with Preposed Logging
above 23120 Foss Rd Nehalem, Oregon

Our domestic water source is Surface water, Type D with water right Cert# 51050 for tax lots #333277 #371896 from said unnamed creek east of Peterson Creek.

When I first moved here in 1977 it was a chore just keeping water running to the house winter and summer. Winter was high water and sediment and an ever changing Creek and Summer low flows constantly trying to pickup enough water to supply the household.

The watershed was still recovering from the Tillamook Burn. Snags and the regrowth of alder.

As years passed and canopy grew the water quality grew along with it. Year-around creek and quality water after freshets during the winter.

In 1996 we supplied 3 households with water fo 2½ weeks without power and not being able to leave Foss Rd for 8 days.

Again in 2007 we Supplied the same 3 households for a week.

Several times I have seen fish in the reservoir. Have no idea what kind of fish but they're fish.

Along with this letter I will be Sending a Video of the Creek the morning after the freshet on Dec. 8th 2025. Also a picture of one of the fish found in reservoir.

Besides water quality after logging the Small Steep draw, would be the on

going threat of landslide and risk of property and residents.

The Geotech Mike Buren that came down said he thought we might be ok in the event of a slide or blow out but Bonnie Wood property would take the most of it.

To close I would like to finish up by saying I would like the Department of Forestry halt the logging of personal watersheds with steep slopes as part of the new Forest Management Plan.

Why not put this wonderfully diverse unit into your inventory as a back up "Habitat Conservation Area".

Oh did I mention our owl population? for another time.

Thank you Keith and Tracy Chartier

To the Board of Forestry and Oregon Department of Forestry,

As an Oregonian who deeply values our state forest system, I am speaking tonight to urge revisions to the draft Forest Management Plan.

To me, the Tillamook, Clatsop, and Eliot State Forests aren't just acreage; it's a sanctuary where I go to recharge among the trees. I want to ensure that future generations can experience the same legacy of towering Doug Firs and rushing salmon streams that define Oregon's natural beauty.

We've seen decades of aggressive clearcutting leave nearly half of the salmon streams in the Clatsop State Forest listed as 'impaired' according to the Clean Water Act. While the Habitat Conservation Plan is a good start to keep species from disappearing, it isn't a plan for them to truly thrive. We need to amend the Forest Management Plan to move beyond just survival and toward real, and honest restoration.

- **Decouple Funding from Logging:** I'm asking you to remove Principle 3 from the plan. Forcing timber revenue to pay for all forest management creates a backwards incentive that puts logging ahead of everything else. This 'revenue-first' mindset contradicts state law, which requires our public lands to be balanced for everyone—including hikers, hunters, and the wildlife that lives there.

- **Restore Mature Forests and Climate Resilience:** We shouldn't be clearcutting the very forests that are best equipped to fight climate change. I want to see a moratorium on harvesting our diverse, older stands until we've reached the 30% threshold promised in our current policies. Letting these trees grow longer isn't just good for the ecosystem; it's a common-sense way to maximize carbon storage and build real climate resilience.

- **Ensure Clean Water and Species Recovery:** We need the ODF to get serious about our water by creating targeted restoration plans that actually fix impaired watersheds within the next decade. Beyond just 'holding the line,' the FMP must include bold, proactive strategies to bring those 17 vanishing species back from the brink, ensuring they don't just survive, but truly recover.

Oregonians deserve forests that provide more than just timber.
We need a plan that ensures
- Clean drinking water
- Resilient ecosystems
- And a future where salmon and spotted owls can once again thrive

Thank you for your consideration

J. Hemlock

To the Oregon Dept. of Forestry

Thank you for taking our testimony. The Public's involvement is so necessary, as these are our forests. You have heard this evening much about wanting a strong Habitat Conservation Plan. This is essential if we are to have a future.

I would like to add a bit of a different perspective to this whole issue.

We have a wonderful Temperate Rainforest, that as you know extends from Alaska to Northern California. As you also know, it is the largest Rainforest in the world.
Truly, I hope you will join us in trying to keep it intact.
I have seen no information on transpiration statistics on how much our Forests give in moisture and rain.

Isn't that what a rainforest does? I'm sure it used to help us get 40 to 50 inches of rain a year here in Eugene. But I haven't been able to find measurements of transpiration. Do you or OSU do this kind of investigating and reporting?

BUT... we are busy cutting down these forests. Big time. ODF is clear-cutting, even Old growth Forests, as is the US Forest Service, and BLM. In addition we have folks like Weyerhaeuser ….(who have figured out how not to pay taxes to the counties where they cut), and Sierra Pacific run by Red Emmerson and family who are the second largest land owner in the world, who clearcut, spray, and replant with way too many trees. And you know that that does to our water supplies, and wildlife.
I hope you will seriously start to look at our future on earth as humans.
Please please... consider the 7th Generation.
Thank you.
Sue Craig sueacraig@gmail.com 541-607-0204 Eugene 97402

Hello

Every day I drive to work or take my dog For a walk and see truck load after truck load of logs and more and more Land being Changed. I

There are 2 sides to every situation. I Understand we need trees to make homes and paper however I also know we need trees to support our soil, wildlife, drinking water supply, quality of life. The more our forests are being cut down the less there is for our native animals / wild life. less clean water to drink and less people ~~coming~~ going on vacation in what was a beautiful place. There is a lot of money in tourism there are lots of people living in these small Coastal towns that rely on clean water and fresh air.

I write this letter in hopes it brings a small awarness on the negitive effects stripping our lands of our life giving trees is doing to our area, planet and every Breathing Creature that lives here.

There are plenty of othera ways to bring money into the community than just cutting down all the trees. Consider those options and give the land time to heal and grow healthy trees

Oregon Board of Forestry
Draft Forest Management Plan
January 25, 2026

My name is Cheryl Johnson and I am a 50 year resident and land owner in Clatsop County. I am a retried public school librarian and my husband and I raised a son and a daughter here.

We have been neighbors to Oregon State Forestry for over five decades as our back property is adjacent to ODF land. I have major concerns about the draft Forest Management Plan. **Please amend the current draft to include policies which:**

Base decisions and plans on best science available.
Not merely a suggestion or lip service. The FMP needs to be amended to include the REQUIREMENT that all actions are based on best science available.

Promote healthy watersheds for clean drinking water and healthy habitat for salmon.
With long-term protection of the watersheds we ensure clean drinking water for future generations. And we protect salmon and other native fish by designating areas that won't be clear-cut in the future. Our home is within walking distance of the Columbia River and we are keenly aware that there are currently 13 species of salmon that are threatened or endangered on the Columbia River. State, federal and private organizations have been pouring millions of dollars into restoring salmon runs and we can not endure any further loss of habitat.

The current draft FMP must be amended to include long term protection of watersheds and restore water quality to levels which will ensure clean and abundant drinking water for my grandchildren and healthy habitat for salmon.

Bring back balance to state forests.
The policies of the past which balanced harvesting with consideration for clean water, fish habitat and recreation were turned on their heads in 2010. At that time the Board of Forestry significantly increased the goals for clear cutting and decreased the goals for mature forest.

Our neighbors and friends make their living in the timber and fishing industries and we appreciate and respect these traditional livelihoods. A balanced approach is needed which will sustain these jobs while not prioritizing logging over all other values in OUR state forests.

My husband and I are lucky enough to have 3 grandchildren living in Clatsop County. The Oregon State forests belong to ALL of the people of Oregon and we are committed to ensuring a healthy forest legacy for our grandchildren and all future generations. We urge the Oregon Board of Forestry to move forward with significant changes to the draft FMP

Comments: Oregon Forestry Management Plan

January 21, 2026

We live on a small 13 acre wood lot. We have been here for 50 years, raised several children and now enjoy grandchildren, all of whom attended local schools.

Millions of acres of Oregon forestlands are now owned by Wall Street investors who profit from timber harvest, while paying virtually no taxes. These same investment corporate entities have transitioned from a more biological healthy model of harvesting on a 50-60 year rotation to a financial model, harvesting on a 30-40 year rotation.

This financial model is leading to significant ecological harm, including damaged watersheds, imperiled salmon runs and increase and severity of wildfires, due to climate change.

I would think any good, decent Forest Management Plan would include how to stabilize or increase funding to support ODF operations in additions to local schools, roads and law enforcement agencies.

Surely someone in ODF is talking to Salem about the FMP as it pertains to funding and sustaining healthy forests for future generations.

In the 1990's the Timber Severance tax was largely eliminated, resulting in a loss of over3 billion dollars that would have gone to rural communities.

When we logged part of our property we paid the Timber Severance Tax. Why shouldn't major landowners also pay?

The solution – reinstate a timber harvest tax to support our rural counties. This tax should gradually increase based on acreage held. Provide an incentive such as reduced tax rate for those who agree to grow trees longer. Recognize that longer rotations and old growth trees are the most effective natural climate solution to draw down atmospheric carbon and help mitigate the climate crisis.

If the timber companies paid their fair share, this would take pressure off Oregon Department of Forestry and us working stiffs to fund county services.

Justin Butterbs State Forest Director
2600 State St. Salem OR 97310

Dear Official,

I have felt very lucky to have had the opportunity following the event of my brother Michael's passing to be here at his house in the lovely state, beautiful area. Daughters joined me, separately to tour, twice, to large tracts available to the public to see, here and in Washington state where we also toured. Unforgettable experience, priceless.

Though Vermont where I lived 25 years is tiny in comparison it has a more beautiful horizon and doesn't clearcut.

I was sad to find out that the water here is not safe, sorry to have to 'outgas' it and fear toxic roadside vegetation or forage.

Tho I'm glad you have a public input time, I'm greatly saddened by the inefficiency and snails pace of it, given the lightning quick communication capabilities of today.

I am also appalled by knowing you have not abided by your own rules, kind of akin to the disastrous politics at the Federal level these days. It's irresponsible to ignore up to date science that could protect public water more vitally than all other resources but ours.

I urge you to find other ways to make the Forests work for you, to take private company payoff cuts if necessary to enforce the public good - This is the only decent solution. Use up the dark money available and stop cheating your selves

Respectfully,

Maureen Hurley

Justin Butteris
Rules Coordinator
Oregon Department of Forestry
2600 State Street
Salem, OR 97301

RE: Public comment regarding the proposed rule to replace the Northwest Oregon State Forest Management Plan, Southwest Oregon Forest Management Plan and the Elliot Management Plan with a single Western Oregon Plan excluding the Elliot State Forest.

Dear Mr. Butteris,
Freres Lumber Co. inc. is a 103-year-old family-owned manufacturing company employing 420 people in the Santiam Canyon. The company is a government contractor relying on State and Federal timber sales for our existence.

We testified against the implementation of an HCP on state lands multiple times and we were disappointed the board voted 4-3 for a 70-year HCP that will mirror the past 30-year catastrophic experience on Federal lands resulting in about one half of Federal timberland destroyed by fire in Oregon.

The implementation of the HCP and the Westside NW Forest Plan will result in less management, more fires, less reforestation, mill closures and continued harm to the economic well-being of rural Oregonians.

It is especially disappointing that ODF has already implemented the HCP prior to its approval by the Federal agencies and it's disingenuous that ODF is asking for public comment when it has already implemented the plan.

Presently there are 3 plans due to the unique characteristics of the Northwest, Southwest and Elliot Forests. Individual plans should remain in place to more effectively and efficiently manage the three forests.

The department has been financially self-sufficient for decades. The change in the Plan and HCP will result in the agency becoming dependent on general fund money and will be continually underfunded in perpetuity. The Private Forest Accord requires money for monitoring and other expenses from the agency that it will not be able to meet its obligations and will be subject to litigation.

It's ironic that ODF is trying to avoid litigation by adopting a flawed HCP and it will continue to be subject to court challenges with or without the HCP. That is the true intent of the urban, liberal litigation industry that the Democratic administration colludes with.

More problems than solutions are being created by the proposed plan and HCP. Rural Oregon timber dependent communities have never economically or socially recovered from the 1993 Northwest Forest Plan, and the HCP just piles more pain and suffering on these communities.

ODF's preemptive implementation of the "proposed" plan & HCP has contributed to the mill closures in Banks, Philomath, Springfield, two in Riddle, Toledo, Pilot Rock and Camas, Washinton and Bingen, Washington over the past 18 months.

The Santiam State Forest lost one half of its forest to fire over Labor Day weekend in 2020. The unburned 25,000 acres of the Santiam Forest is growing 17.5 million board feet annually.

We request the plan revision target 17.5 million board feet of harvest annually on the Santiam State Forest to aid the timber dependent and fire damaged communities in the North Santiam Canyon.

Thank you for the opportunity to comment on the ODF activities.

Sincerely,

Rob Freres

Robert Freres Jr.

DATE: January 28, 2026

Re: Forest management plan.

I am a lifelong resident of Clatsop County writing to provide comment on the planned updated forest management plan.

I am concerned about the vaugeness surrounding plans to protect forests, watersheds, wildlife, and residential water sources. In order to comply with the stated commitment to prioritize the "greatest permanant value" for all oregon residents, there must be a specific, explicitly stated plan of action to protect our forests and communities.

The plan must include actionable plans to protect all domestic water sources from sediment and herbicide/insecticide contamination. It must include a clearly worded policy to ~~protect~~ minimize the use of pesticides in order to protect drinking water sources, as well as wildlife. There needs to be an added requirement that all actions are based on the best available science, that is, sciena that is free from the influence of corporations that have a vested interest in funding studies to provide results in their favor. There also needs to be a clear plan for restoring healthy, mature forests. Timber Harvest of complex layered forests must be stopped in order to preserve our states valuable carbon storage resourses, that could provide a valuable source of revenue if a carbon storage program were pursued, as other states have been moving toward. The plan also must include protocol for restoring watersheds with impaired water quality. Lastly, The plan should include a commitment to the recovery of threatened and endangered species.

Residents of oregon are depending on you to take action to protect our forests and water resources. The FMP must be updated to include specific, actionable plans that serve the greatest permanent value, using the best available science.

Sincerely,
Eric Kim

JAN 16, 2026

JUSTIN BUTTERIS,

thank you for taking the time to engage with the public and listen to citizen concerns regarding the new FMP. A brief scan of the draft shows all the expected buzz words one would hope for when caring for public lands - your principles being "biological diversity," "social benefits," "Forest and watershed restoration," "cooperative efforts," and "managing for climate change." While this all sounds nice in theory, we all know this is not what actually guides ODF in decision making, but rather "revenue" and the "bottom line." Understandably, money is what guides the department of Forestry, because that's how the system was designed. Timber = revenue, which funds the system to continue as is, statusquo. The problem is, our world, our forests look a lot different today than when

this system was originally created. The amount of wild, unmanaged forests are dwindling, old growth trees can hardly be found, and the remaining Legacy forests we have left in Oregon are being sold off to the highest bidder. Yes we need timber and wood products, but can't there be another way? Clearcuts do not equal "biological diversity." Clearcuts do not equal "social benefits." Clearcuts do not equal "forest and watershed restoration" Clearcuts do not equal "managing for climate change." and so on.

While state forests only comprise 3% of our state's total landscape, I believe that is enough acreage and habitat to make a positive change and move the needle in the right direction. I'm asking you, and the Dept. of Forestry, to actually take a hike around a clearcut and tell me this is good for our forests, and our community. If you were

to fulfill your promise of engaging with rural Oregon communities and "seek diverse input from Oregonions" I think you would hear a different story. We are sick of our forests disappearing, we are sick of chemicals being sprayed from land and air, we are sick of our rivers and streams being contaminated by logging practices. We ask that you come to our towns and actually sit down with us, and hear what we have to say. Compromise isn't easy, but listening is.

Thank you for your time,
Oregon Resident
Clatsop County

Public Comment to Oregon Board of Forestry on the Forest Management Plan

Dear Chair Kelly, Interim State Forester Kate Skinner, Members of Oregon Board of Forestry

MCAT has been advocating with the Board for many years now the need to practice climate smart forestry and to finally implement the Climate Change Carbon Plan that for too long has simply been ignored. Climate smart forestry optimizes carbon sequestration, storage and resilience while minimizing greenhouse gas emissions. Practices include growing trees longer, protecting mature and old growth trees and maintaining a diversity of species, ages and structures. Sadly, the FMP does not achieve the aim of climate smart forestry and ignores the Climate Change Carbon Plan. This Plan needs to be applied across all of ODF.

We urge you to **protect our legacy forests and stop clearcutting on state forest lands.** The FMP does not ensure that our state forests are providing the Greatest Permanent Value as clearly the climate crisis the state faces demands that we increase carbon sequestration and storage. In fact, we now have the opportunity to change ODF's revenue model by following in the footsteps of the Elliott Forest and **engaging with carbon markets. We can thus achieve a win/win by growing our trees longer and generating revenue.**

A number of other ecosystem services are achieved by practicing climate smart forestry including meeting the needs of endangered and threatened species. The FMP needs to ensure that fish and wildlife can thrive. Though the HCP has been a step in the right direction, the proposed plan fails that test. **A business as usual approach with clearcutting of mature forests not ecological forestry.** We need to both manage across multiple landscapes while also practicing biodiversity conservation.

All future practices must use the best available science. Stop prioritizing logging over all other needs. Importantly the FMP needs to be designed to ensure that a minimum of 30% of our state forests are complex layered forest stands. One of the tragedies of the proposed FMP is that it will further degrade our watersheds. Instead, we need to ensure practices that restore water quality to the levels needed for salmon and other aquatic species.

Our forests on the wetter west side of the state are among the most carbon dense in the world and yet the FMP simply ignores this extraordinary capacity and takes us in the opposite direction with where we need to go. We can do better. The CCCP suggested that Oregon could be a model for other states in practicing climate smart forestry, yet we essentially are continuing to practice forestry as if nothing has changed over the past 50 years. We can learn from our mistakes. Change is hard and often challenging, yet the times call for change. Our hope is that the new State Forester will recognize that one of the most critical things needed done in ODF is to change the culture from one that is focused on timber production to one that practices authentic climate smart forestry. Do the right thing and let our forests become the elders we look up to.

Sincerely,

Rand Schenck
MCAT Forestry and Natural Lands Lead

** MCAT is a community of experienced volunteers, sponsored by **OLCV**, who help steward significant greenhouse gas reduction policy into law in Oregon. MCAT also actively organizes to elect and support legislators who will work for strong climate legislation.

- The FMP must be based on the best science available.
- Amend the draft FMP to require compliance w/ applicable laws, policy, plans + key performance measures adopted by the BOF or the state legislature. These need to be ENFORCEABLE.
- Delete or Amend Principle 3 in the draft FMP.
- Restore healthy mature forests. Halt all clearcut timber harvest of complex layered forest stands on N.C. state forests until a 30% max of forests are in this condition
- Develop forest management restoration plans for watersheds w/ impaired water quality to restore water quality to healthy levels.
- Add strategies to implement the Climate Change + Carbon Plan for State Forests.
- In addition to the HCP the FMP should include specific strategies to contribute to the recovery of the 17 species who rely on the habitats in our state forests for their survival.
- Drinking water should be THE greatest permanent VALUE

- Focus on a carbon plan
  Monetize it + reintroduce
  Severance tax to ease burden
  on communities (+ hence, our
  forests)

TO:

ODF PUBLIC AFFAIRS,

JUSTIN BUTTERIS

Thank you for taking the time to read these letters and listen to what your neighbors in oregon are concerned about. I'm hoping the draft FMP can be updated to be more specific about how you will be protecting public drinking water as a human right. As you know, each time you clearcut a large area of forest, and then subsequently spray the land with chemicals, you are diminishing the supply of clean drinking water. clearcuts cause less water to be absorbed into the ground, and the chemicals are forever contaminating the soil and in turn us as residents. Please ban all spraying + protect our water.

Thank you
for listening.

I am writing Re: the Forest Management Plan, specifically addressing the requirement that Oregon Forest be managed for the "greatest permanent value." Mature Forests provide us with many invaluable services, But perhaps their most crucial role at this moment is their ability to store carbon & mitigate climate change. Mature Trees of 80 years + store carbon far more efficiently than young trees, which also require carbon to be planted. We Do Not have the time to wait for trees planted now to be 80 years old - Forest Scientists are united in saying that the best way to manage Forests for Climate change Mitigation is to protect mature Forests. Oregonians - and the rest of the world - desperately need you to prioritize the well-being of our Forests over the stock prices of Logging companies. **Delete or Amend Principle 3 in the draft EMP.** Reinstat[illegible] Insurance Tax. Put humanity's survival [illegible] profits

Hellow Justin

And all O.D.F. people

Ive lived here 46 + years among the trees. I was sprayed with herbicides on Sept. 23, 1984, O.D.F. had clearcut in 1981. Now Weyerhauser spayed my water system again. Ive beer drinking tainted water ever scince.

I want to see a management plan that uses no chemicals in any drainage above any drinking water source. Maybe brush trimming drones?

I like the thinning projects in my area, nice trees! But I want Weyerhauser to pay their fair share for Schools etc. the management plan should cover Corp. lands also.

I want to see more wild life studies monitoring especially Amphibians. Also some pre-disturbance Archeology Surveys would add to our knowledge of early human activity.

More attention should be on recreation activities. Trails, campgrounds with Big trees.

thanks William R. Kirk

BOF members, State Forester, and ODF staff,

Thank you for taking my comments on the 2025 Draft Forest Management Plan.

There are some good ideas expressed in the current draft and I do appreciate that.

But I do ask that you include more specific actions to take to protect drinking water sources on State Forest Land. Please amend this draft to include specific policies to increase protections of water resources.

Also you must conduct a detailed inventory of drinking water intakes that are on State Forest Land. Timber is not the only Forest resource of dollar value— water has real dollar value— begin accounting this value.

Hello- As an Oregonian, I oppose all the clearcutting of mature forests, which denigrates biodiversity, as well as water quality and the ability of forest to sequestor Carbon and mitigate floods.

The forest has value in terms of other things that matter - water, habitat for animals and fish and recreation.

Sincerely
Denise Monaghan

To ODF Board Members,

Previous legislation has required 30% of forests be complex, older growth and yet we sit than 12%. It is passed time we demand target be met. Any new Forest Management must include targets and accountability must have significant consequences for in charge. In other words, give the FMP

Oregonians are waiting for true le from the Board.

Sincerely,

Cheryl Conway

Thank you for reading this comment on the 2025 Draft Forest Management Plan.

This draft is a thoughtful and logical plan to guide management of Oregon's State Forests during the next decade. However, there is a gaping omission – placing a **dollar valuation** on water in and from State Forest land.
Water is the most valuable resource Oregon's State Forests provide and store for human endeavors – drinking water, agriculture, industrial use, recreation, and more.

I urge the BOF to direct ODF to begin the process of evaluating and assigning dollar value to water resources intercepted by, stored in, and transmitted through State Forests. Let's work to understand the value of water and ways to improve protection and management of it on ODF managed land.

Sincerely,
Christopher Farrar
