The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Christy Sinclair

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon-storing powerhouses in the face of climate change. The priority in managing these forests should be ecological health and resilience, not timber or other forest products.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Hailee Newman

Dear Forestry Department,

I strongly encourage the Department to adopt a plan that prioritizes the needs of working forests and the rural communities that depend on them. When the Department of Forestry adopted the Habitat Conservation Plan (HCP), it stated that it wished to inflict no additional economic hardship on rural communities and to support ongoing timber harvests on the remaining acres. In order to achieve this, I urge the Board to adopt the highest possible harvest volume allowable under the new and highly restrictive HCP.

Rural timber counties are already facing millions of dollars in budget shortfalls due to the restrictions of the HCP. Further reduced harvest levels will only compound the harm to rural communities, forcing counties to slash essential services such as law enforcement, education, road maintenance, and wildfire prevention. In addition, reduced harvest levels further restrict the Oregon Department of Forestry from achieving its core mission without requesting funds from a general budget that is already stretched thin.

Our foresters are the best stewards of our forest lands. Foresters can prioritize harvests in a way that preserves forest health by supporting restoration work, such as removing diseased trees and creating healthier, more diverse forests, while also providing jobs and resources for rural communities. A well-planned harvest supports a healthy, growing forest and protects habitat for the future. Allowing the maximum allowable harvest under HCP guidelines protects jobs and provides essential funding to county governments and schools.
The HCP has placed tremendous financial strain on our rural counties. The Oregon Department of Forestry should allow rural community experts to implement the plan in a way that best supports the economic stability of rural communities while preserving our forests for future generations.

Sincerely,

Max Sherman

Dear Forestry Department,

Please accept the following comments on the Western State Forest Management Plan.

The governor's recent executive order tasked state agencies with evaluating the climate resilience of Oregon's communities and natural working lands.

This should include the production of climate friendly building materials that also help meet the governor's housing goals and increase the economic viability of our rural communities.

Wood products are the only building material that stores carbon long term – and state forests should be focusing on contributing to the state's production of lumber! Not only does responsible harvest create lumber, but it also employs rural Oregonians with green jobs that support our families.

Active management supports forest health, provides climate-friendly wood products and is essential for ODF to remain financially self-sufficient without burdening taxpayers.

Please adopt a forest management plan that supports climate smart forestry, including sustainable production of wood products.

Sincerely,

Matt Evensen

Sent from my iPad Thank you for the opportunity to voice a concerned opinion by a Oregon citizen.
Oregon is disadvantage, by past legislation, that turned over our 60% of our forest to be managed by federal government.
First, the mind set, that we need "to offset the environmental harms of logging" to put fourth an environment to "increase our forest to be healthier"! This is possible!
Oregon only manages about 3% to 4% (821,000 to 942,000 acres) of our forest, but that is a start.
Blocking our forest into 10 to 20 acres and do 'selective logging' and protective and leaving young tree spaced for enough room to log more mature trees. Also leaving enough of the 'more bigger mature trees' to give the local wildlife protection for survival.
After the trees have been harvest for timber, the timber companies will need to be responsible for cleaning the undergrowth, removing of all material, the Forest Service experts feels need to be removed for preventing forest fires and leaving the ground healthy for future growth. Replacing the ground with 'seedlings' for future timber growth could be done by the Forest Service
A logging company would be awarded however many 10 to 20 acre areas the Forest Service feels like the company could harvest.
This is only a start for smart logging of our Oregon forest! Many other ideas would definitely be realized in the future for healthy forests!

Subject: Comments on the Draft Forest Management Plan
Date: Monday, January 05, 2026 11:03:56 AM

[You don't often get email from trazom2@gmail.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Dear ODF Staff:

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Please confirm that this is the best way to submit my comments.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices. I am glad that you will be revising this Plan.

I am a long time Oregonian, homeowner, hiker and birder. I taught ecology for 20 years locally, and also worked as a wildlife biologist for over 25 years in the Pacific Northwest. I choose and love to bring family and friends to intact older forest ecosystems. These have lots of different species of trees, multiple canopy layers, lots of dead and down and solitude away from the cities and the noise. They are a place where I find solace, as does all of my family for hiking, camping, birding and fishing. I have taken hundreds of students to older forests to teach them about forest ecosystems. Students have said that their lives have changed after learning and walking through older forests.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

As a former Forest Service employee, I am very concerned with the mismanagement of our beautiful forests here in Oregon. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 years.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

Monica Burns

The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Brenda Choi

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Thomas Burt

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

After Vietnam, I took a 2-year degree in forestry primarily to learn about the family legacy forest land. Over the past 50 years I have had a chance to see forestry operations in all parts of our country. In Washington State, Weyerhauser has lands they clearcut on a forty-acre, forty-year rotation. In places in the south trees are row crops. In Oregon, however, the distinct regions of the State require more of an ad hoc approach. In Southwest Oregon, where I live, clearcuts should not take place because the soils are too thin and the terrain too steep. When industry clearcuts here they re-plant monocultures, decreasing the incredible biodiversity of the region. I ask you to consider the landscape before using the silvicultural tools at your disposal.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Sandy Thompson

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.
As a former smokejumper in Cave Junction and Redmond Oregon, I remember when the Umpqua National Forest was continuous old growth Douglas Fir. Now, it has mostly been cut over. It is time to stop cutting old growth. Have we not learned anything?
Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Gary Therrien

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Charles Reindl

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Please stop clear cutting all of our forests. Between the eye sore of clear cuts and the lack of wildlife passage through the impenetrable forests, not to mention the forever chemicals tainting our water, it is time to stop!

Oregon used to be a lovely place to call home, it is now an eye sore at every turn.

It is time for the Oregon State representatives act on behalf of Oregon and its wildlife, not just timber companies who export most of our natural treasures, while polluting our state.

Sincerely,

Scott Penzarella

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Regina Milione

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

lyric apted

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Diana Brown

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Jason Black

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Nancy Marshall

[You don't often get email from tfarms@netxn.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Shannon Call

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Kathleen Ruiz

Dear ODF Staff,
Plus y'all need to stop building so many roads when you do cut a timber sale. There are way too many roads in the Tillamook, Clatsop etc...

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

mark day

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Kenneth Porter

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Catherine Ream

Dear ODF Staff,

I'm a concerned citizen of rural Oregon. We really need to protect our forests for the health of our communities and ecosystems.

ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

Please make the following amendments to the draft plan:

-The FMP must be based on the best science available.

-Require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature.

Delete or amend Principle 3 in the draft FMP. It continues to prioritize logging over all other values in state forests in violation of the law.

-Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

-Protect watersheds for salmon and communities.

-Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

-Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Dear ODF Staff,

FOR OUR SURVIVAL, the survival of our children and grandchildren, there is nothing more important than taking care of the environment. Without a healthy planet, humans will not survive. And the careful management needs to start NOW!

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include

specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

M Susan Dean

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Richard Cruce

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Allison Everitt

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

Dear ODF Staff,

To protect and restore balance to our state forests, the draft FMP should be amended in the following ways:

● The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.

● Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

● Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

● Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

● Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I (a person living in California whose family has done business in Oregon) value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law and of common sense.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Theresa Bucher

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Bonnie Finitzer

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Brian Oliver

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Alana Preziosi

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clear cutting and timber revenue over multiple values cherished by Oregonians. Clear cutting leaves the land bare of growth capable of minimizing erosion and uncontrolled runoff. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of destructive industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF MUST manage state forests in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amending Principle 3 in the draft FMP, which now requires revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Linda Morgan

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Nora Polk

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Dana Weintraub

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Charles Rinear

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Stephen and Kathleen Hulick

From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Eleanor Israel

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Kim Koch

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. Dear ODF Staff,
As I understand it, scientists believe coastal forest between Northern California and Canada is one ecosystem. Ecosystem. It is in fact more important than the Amazon rainforest and preventing climate change. I'm extremely thankful to live in such close proximity to the Siuslaw. The Old Growth forests are stunning and have a wisdom we seem to lack. What a shame to continue on a path of clear-cutting vast swatches of these important habitats.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Claire Prevost

Dear ODF Staff,

It is truly a shame that our forests were ever clear-cut! If we had it to do over again, would we do things differently?

Of course we would, and because we didn't, it's even more critical thant we learn from our mistakes and do the right thing now, which is not clear-cutting!

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local

extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and future generations.

Sincerely,

Scott Maclowry

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Jeanine Yows

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

johnnee MacLean

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Oakley Brooks

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Sara Abay-abay

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Jasmine Greenough

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Clearysage Roy

Dear ODF Staff,
Stop
Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Melissa Franke

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Margaret Stephens

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Dear ODF Staff,

Please accept these comments on the draft Forest Management for Western Oregon State Forests.

I am an Oregonian who values our state forests for their multiple benefits beyond producing timber. These forests are important to me for recreation, for old growth, for clean water and for salmon and the other wildlife, including the endangered species they support. They are also critically important for mitigating climate change. The continued cutting of old growth forests and older mature trees is contrary to my wishes, that of a large proportion of the public as well as your own rules and legislative direction.

I support changes to this draft Forest Management Plan that would assure forest management that restores older forests and ecological connectivity, through selective thinning (as the USFS does in late successional reserves) to promote forest health and species recovery. In fact to comply with the law all clear cutting of mature forests must be halted until 30% of N Coast Forests meet required old growth metrics.

The draft plan should also incorporate restoration plans and activities into its timber cutting sales to help promote species recovery, clean water and aquatic organism passage.

I would like to see the draft plan changed to accomplish the multi-benefit goals and be accountable to the public at upholding laws and directives. This management plan must incorporate and assure that applicable laws and policies adopted by the Board of Forestry and the legislature and legislative direction will be met and congruent accountability measures be reported on.

Change the draft plan to remove Principle 3 in the draft FMP. This requires revenue from timber harvest to fund all of state forest management activities..so that there is incentive to prioritize logging over all other values in state forests in violation of the law.

Thank you for your attention.

Sincerely,

Fran Recht

The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Robert Moore

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Chip Hall

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Veronica Scheri

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Nancy Humphrey

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

jeff comer

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Norm Baxter

The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Sincerely,

Janine Moore

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.
