SIERRA CLUB
OREGON CHAPTER

Oregon Chapter of the Sierra Club
Comments on the September 2025 Draft
Western Oregon State Forests Management Plan

January 31, 2026

Dear Interim State Forester Skinner,

The Oregon Chapter Sierra Club appreciates the opportunity to comment on the Draft Western Oregon State Forests Management Plan (FMP).

We endorse many of the ODF's Guiding Principles, especially Principle 1-Greatest Permanent Value (p. 11); Principle 2-Biological Diversity (p. 12); Principle 5-Forest and Watershed Protection (p. 13); Principle 9-Tribal Outreach and Engagement; and Principle 12- Managing for Climate Change (p. 16). We support the recommendations in the organizational comment submitted on behalf of the State Forest Coalition for strengthening and applying these principles.

The Oregon Chapter Sierra Club appreciates that the Oregon Department of Forestry (ODF) has worked hard without a permanent professional State Forester and has valiantly attempted to write an FMP that would satisfy every stakeholder. However, we believe that the Western Oregon State Forest Management Plan (FMP) must be reformulated to serve as a tool that:

- Guides the Oregon Department of Forestry (ODF) departmental policies, implementation plans, operating plans, monitoring and evaluation plans, land classifications, and decisions;
- Faithfully implements the Habitat Conservation Plan (HCP) approved by the Board of Forestry (Board); and
- Ensures that western state forests are managed to provide greatest permanent value (GPV) as required by statute and the Forest Management Planning rule.

ODF should be instructed to develop a new draft consistent with these comments and provide the public with an opportunity to comment, including public hearings.

Until a proper FMP can be adopted, we request that the Board direct ODF staff to comply with the Endangered Species Act, Key Performance Measure 10, and the “Stay Ahead” provision of the HCP by:

- Establishing a timeline for each state forest to achieve the required 30% level of mature stands with a complex, layered structure;
- Requiring Implementation Plans to ensure annual harvest objectives are consistent with the established timeline for KPM 10; and
- Prohibiting timber sales that include mature stands with complex layered structure that are adjacent to designated Habitat Conservation Areas (HCAs).

Although ODF suggested abandoning KPM 10 in favor of a KPM that simply requires compliance with the HCP or some less specific metric, KPM 10 is a specific metric directly tied to improved habitat conditions for conservation species. We oppose abandoning KPM 10. Beyond merely preventing the extinction of protected species, ODF should protect adequate habitat to prevent the listing of additional species and to contribute to the recovery of protected species.

The draft FMP fails to provide sufficient guidance to inform ODF state forest policies, planning, and decisions

As drafted, the FMP provides the ODF with precious little guidance. As Board member Heath Curtiss recognized, “it is so vague that it is essentially meaningless."

That conclusion was underscored by the discussion of a proposed harvest key performance measure during the November 18 special Board meeting. In that meeting and meeting memo, ODF indicated that any of the modeled implementation scenarios would be consistent with the draft FMP. The modeling included a scenario with an average of 410 million board feet during the first 10 years under the FMP, and other scenarios with an average of 185 million board feet during the first 10 years. That extensive range of possibilities highlights the lack of scientific grounding and the vagueness of the draft FMP, which fails to inform ODF decisions, notify the public about ODF plans in the state forests, and constrain unfettered ODF discretion.

Distilled down to its essence, the draft FMP merely promises that ODF will make decisions rationally by balancing trade-offs among the various resources and values provided by state forests, monitoring and evaluating results, and making future decisions based on lessons learned.

The forest goals and management strategies in the draft FMP are so elastic that they fail to provide information on both what the State Forester intends to achieve for each resource and how the State Forester will manage those resources to achieve those goals. ODF acknowledges the governing legal requirement at the top of Chapter 3, but then proposes indeterminate goals and loosely connected strategies that make it impossible to ascertain the likely outcomes of these goals and strategies (i.e., the probability of achieving desired future conditions of state forests). This indeterminacy allows ODF to exercise unlimited discretion in balancing tradeoffs among ecosystem services in resource decisions.

The FMP must instead provide goals and strategies that ensure:

- State forests are managed across the landscape for achieving greatest permanent value, and, as noted in comments from the State Forest Coalition, without "sacrifice zones" that are managed exclusively for large-scale clear-cut timber harvest.

- Drinking water is included as a Greatest Permanent Value. This is supported by the Forest Practices Act section 527.710: "…the rules shall provide for the overall maintenance of the following resources: (a)Air quality; (b)Water resources, including but not limited to sources of domestic drinking water." Drinking water sources must be protected from sedimentation and pesticide contamination through drift, soil mobility, and revolatilization.

- Elements of ecological forest management, such as extended rotations, reduced pesticide use, and reliance on variable-retention harvests rather than clearcutting, are implemented in a measurable, time-bound manner.

- Biological and genetic diversity are maintained and increased across the landscape.

- Properly functioning aquatic habitats for salmonids and other native fish and aquatic life are maintained and restored.

The indeterminacy of the draft FMP outcomes is not a necessary or inevitable part of forest management planning under uncertainty. Both private timberland owners and the federal government routinely provide substantive goals and strategies in the forest management plans they prepare.

The lack of specificity in the FMP, as drafted, violates OAR 629-035-0030, the Forest Management Planning Rule. Specifically, the draft FMP violates subsections (2)(c) & (d), which require informative goals and strategies. It also violates subsection (5) by precluding the Board from making the required determination that ODF activities carried

out or allowed *will secure* the greatest permanent value of state forests. It precludes the Board and the public from ensuring that ODF implementation plans, operating plans, and decisions *are consistent* with the FMP as contemplated by OAR 629-035-0030(6).

The draft FMP fails to faithfully complement and implement the HCP

The Board has determined that an HCP and incidental take permit are preferable and less expensive than continuing site-specific avoidance of taking endangered and threatened species (E&T species) under the federal Endangered Species Act (ESA), 16 USC § 1531 et seq. Once the federal government has approved the state's HCP and incidental take permit, compliance with federal ESA requirements will, in theory, be assured by provisions within the FMP, HCP, and incidental take permit.

Until the HCP is approved by the federal government, the draft FMP must require proper transitional management of forest stands outside of Habitat Conservation Areas (HCAs). ODF is clear-cutting older, complex, layered habitat outside HCAs in state forests **before** the stands within HCAs have matured to provide adequate habitat for E&T species. ODF is engaging in these clear-cut harvests b**efore** the HCP and incidental take permit have been approved by federal wildlife agencies, and without complying with the "stay ahead" provision of the HCP. This means that ODF and those currently logging in western Oregon state forests are violating the Oregon ESA, ORS 496.171 to 496.192, 498.026, and 564.100 to 564.135, the federal ESA, 16 USC § 1531 et seq., and the state-approved HCP.

Historically, ODF has prioritized maintaining harvest levels in district implementation plans and resulting annual operating plans, rather than meeting its commitments under the ESA, the HCP, and KPM 10 to manage wildlife habitat to meet the needs of protected species. For example, in the 2026 operating plan, ODF plans to clear-cut 633 acres of layered, older forest structure outside of HCAs in the Tillamook and Clatsop State Forests, without considering whether tree stands within the HCAs have matured to provide adequate habitat. Over the past three years, the ODF has approved thousands of acres of timber sales in stands with older or complex, layered conditions, including the controversial Davis Ridge sale. The FMP needs to require proper transitional management of forest stands outside of HCAs to meet the "stay ahead" provision of the state HCP, the OESA, and the federal ESA.

Beyond preventing the extinction of protected species, the FMP should include requirements that protect all species sufficiently to prevent their listing under endangered, threatened, or other protected-species status, and to ensure the ODF plays an appropriate role in the recovery of protected species beyond extinction levels.

The draft FMP fails to ensure that state forests will be managed to secure the greatest permanent value of those lands to the state

As indicated above, the FMP's lack of specificity prevents the Board from determining whether the state forests will be managed to secure the greatest permanent value of those lands. To maximize the likelihood that the reformulated draft FMP will warrant such a determination, the Oregon Chapter Sierra Club recommends:

- The introductory chapter should clearly set forth the geographical and temporal scope of the FMP. On a recurrent basis, ODF has mistakenly stated that the FMP replaces the Elliott State Forest FMP. Additionally, the intended planning horizon of the FMP needs to be clarified. Given the extraordinary speed of change in conditions and technology, we recommend that the FMP include a provision to review the plan more frequently than in the past, with a maximum of 5 years.

- Following the introductory chapter and a chapter describing current conditions, a chapter should be included to describe the overall planning and management process. The September 2025 draft provides information piecemeal, forcing readers to wade through an exhausting, cumbersome array of at least 20 terms with no well-established relationships to one another. The FMP refers to principles, *themes,* management approaches, goals, strategies, guidelines, key performance measures*, recommendations*, implementation plan targets, *best management practices,* operational policies, policy standards, operational standards, *tactics, metrics, outcomes, values, and objectives.* These descriptors of ODF management are in addition to the *classes, subclasses, and emphasis areas* embodied in the Forest Land Management Classification System, as well as the adaptive management model. About half of the terms do not appear in the decision-making model shown in Figure 4-1. Please provide a thorough description of the overall planning and management process in an early chapter.

- The draft FMP conflates ODF's vision of a forest providing all enumerated ecosystem services with the legally mandated articulation of goals. While goals should be broad descriptions of long-term desired states or outcomes that *give ODF purpose and direction*, the descriptions must be sufficiently specific to inform the adoption of precise key performance measures and metrics used to verify that goals are being met and that the strategies chosen are successful. The draft FMP repeatedly reiterates goals as a strategy. Strategies should be carefully thought out, with detailed descriptions of how ODF will meet the FMP goals and their associated performance measures and metrics.

- The FMP should include Key Performance Measures and other metrics to gauge goal attainment and the success of strategies. Without such specificity, it will be difficult to assess whether the FMP will secure GPV.

- The reformulated draft FMP should underscore the importance of the ODF Climate Change and Carbon Plan (CCCP), which directs ODF to lead by example and demonstrate climate-smart forest management on state forests to achieve “Greatest Permanent Value.” The moist forests of the Oregon Coast Range are among the most productive forests in the world and can accumulate vast quantities of carbon. The FMP should identify and protect areas with high carbon storage potential, especially those that can provide benefits to threatened and endangered species, water quality, and educational and recreational opportunities for Oregonians.

- Principle 3, the REVENUE principle, is formulated improperly because it mandates harvest revenue sufficient to cover ODF expenditures, without regard to the impact of such harvests on the greatest permanent value of the state forests. It should be replaced by a frank acknowledgement that forest management to achieve GPV should not be held hostage by a self-funding revenue principle.

- The draft FMP goals emphasize the need to "Maintain and enhance forest productivity by producing sustainable levels of timber” (11) and “generating regulatory certainty for timber production” (22), yet appear to prioritize generating timber revenue in the short term, despite the adverse impact of short-term harvesting on GPV. The FMP should include a goal committing to working with the legislature to establish diverse sources of revenue for counties and the department.

- Although harvest operations on General Stewardship lands may “emphasize revenue and timber production” (p. 36), the FMP should not foreclose non-harvest revenues, such as carbon storage credits, wetlands credits, watershed protection, and habitat conservation from General Stewardship lands.

- The FMP should include strategies to reduce reliance on chemical spray below current levels on state public forest lands. Rapidly phasing out the application of aerial spray, in particular, will promote biodiversity, watershed health, and the well-being of animal and plant life. Under the GPV rule (OAR 629-035-0020), the overarching goal for wildlife on state forests is the protection, maintenance, and enhancement of habitat for native wildlife species (p. 41).

The Oregon Chapter of the Sierra Club strongly urges the Oregon Department of Forestry and the Board of Forestry to support a new Forest Management Plan that includes specific language to implement the Climate Change and Carbon Plan and ecological forestry, moving away from the harmful industrial forest practices of clearcutting and pesticide spraying. This would help balance environmental and economic goals to achieve the greatest permanent value for the people of the state of Oregon.

Respectfully submitted,

Carol Valentine
Forest Team Coordinator
Oregon Chapter, Sierra Club

SPRAY NOTICE

Herbicides are quietly simplifying and tainting Western Oregon's timberlands

written and photographed by Daniel O'Neil

WESTERN OREGON is a fertile land. The conifer forests that expand west from the Cascade Crest to the coast grow on some of the world's most productive forestland. Plenty of rain, rich soil and enough sun nourish all sorts of plant life here. The area is the country's top producer of softwood lumber and plywood, necessary goods that Oregon can naturally provide.

With only conifers in mind, primarily Douglas fir, foresters here have long considered competition from other plants a hindrance to reforestation. Water, sunlight and soil nutrients are precious commodities for a merchantable crop like trees, so landowners prioritizing timber production insist these elements feed conifer seedlings and nothing more in the first several years after replanting. Herbicides help them do that.

Herbicides, however, don't just make way for the re-emerging forest. Their lethal power undermines the foundation of a healthy forest by eradicating other important plants like hardwoods and broadleaf shrubs. This, in turn, affects the animals, birds and insects that rely on such understory plants for habitat and food. Herbicides, many of which can pose severe health problems for humans and for endangered species like salmon, also make their way into the streams and rivers that drain the forests.

Ever since their introduction into Oregon's woods in the 1960s, herbicides have served as a linchpin in forestry here. Herbicides have also fueled passions and debate over their harm to humans and the forest ecosystem. Whether or not Oregon needs herbicides to produce profitable timber depends on how you look at it. For those in favor of a healthy, resilient, functioning forest, the widescale use of herbicides deserves questioning.

A replanted Douglas fir on state forestland, with plenty of room to grow.

In forestry, herbicides serve two purposes. One involves the control of invasive plants like Scotch broom and Himalayan blackberry that can quickly replace native plant species. Even herbicide skeptics accept this targeted use. The other, far more widely used purpose is to eliminate any vegetation that, post-clearcut, might compete with replanted conifer seedlings. Here begins the polemic of herbicide use in Oregon's forests.

Some of the most popular herbicides used on Oregon's forests include familiar names and usual suspects. Glyphosate, the active ingredient in Roundup, is considered a "probable" carcinogen by the International Agency for Research on Cancer. Another standard forestry herbicide, atrazine, is banned in the European Union. The herbicide 2,4-D is listed as a "possible" carcinogen by the IARC, and was one of two key components in Agent Orange—the other component, 2,4,5-T, triggered enough controversy in Oregon's woods in the 1970s that it isn't used here anymore.

Because the state's arid east side doesn't grow a raucous understory of plants, herbicide use affects forests in Western Oregon. The total amount used each year remains unknown because spray application records are not routinely reported to any governmental agency. But a study by Oregon State University researchers found that chemical applications cover "potentially 1 million acres of Oregon forest land annually, with the vast majority of these herbicides being applied to harvested units."

Tall grass cloaks a determined young Sitka spruce.

How herbicides are applied, or not applied at all, matters. Controlling competitive vegetation is only necessary after replanting a clearcut, a disturbance that opens the land up to the plants, including invasives, that emerge to re-establish the natural order. Spraying herbicides is the norm across most of Western Oregon's industrial and state-owned timberlands, which account for nearly three-quarters of the timber harvest here, and where clearcutting remains king. A dose—or two, or three, or maybe four—of herbicides arrests competition in the first few years of post-clearcut regeneration.

Ground-based applications, often with backpack sprayers, offer a somewhat precise method for applying herbicides. But on rugged terrain, all too common in Western Oregon, aerial spraying takes over. Like a crop duster, a plane or helicopter covers the clearcut, leaving wind drift as a serious, contentious issue because the toxic spray can travel far from its intended target, into waterways and onto communities. In 2017, Lincoln County voted to ban aerial herbicide spraying, the first county in the nation to do so. But a judge overturned the ban because Oregon state law preempts county rules on pesticide use.

Competitive vegetation and invasives can be controlled without herbicides—mechanically, with chainsaws and bulldozers—but this requires extra time, labor and expense. The Forest Service and the Bureau of Land Management prove it's possible, but they don't manage their lands exclusively for timber, and they don't clearcut in Western Oregon anymore. Heavy logging and spraying led to a federal court injunction in 1984 that prohibits those agencies from using herbicides, with exceptions for invasives.

Jim Furnish, who served as the Siuslaw National Forest supervisor in the 1990s and later as deputy chief of the Forest Service, admitted that herbicide-free forestry wasn't easy. "It was more costly, more labor intensive," he once told a reporter. "But forestry in Oregon is profitable under many different scenarios. The Forest Service just saddled itself to a different horse and rode off into the future."

When droplets of herbicide hit the earth, certain, or all, plants soon die. With them goes biodiversity, the backbone of a healthy forest. Like a symphony, biodiversity relies on a wide range of contributors. The variety of early-successional plants that sprout after a disturbance, like wildfire or a clearcut, work hard to renew life below and above ground, offering habitat to the many species of fauna that make a forest ecosystem complete.

Before replanting, this industrial clearcut will be burned and herbicide sprayed, then sprayed again after replanting.

"If you look at the developmental sequence from a disturbance, the early-successional ecosystem is the most biodiverse stage in the entire developmental period of the forest," said Dr. Jerry Franklin, a forest ecologist and University of Washington emeritus professor world-renowned for bringing a new, holistic view to forest management in the Pacific Northwest.

Herbicides inhibit the early-successional forest, and Franklin often cannot believe his eyes. "If it's green, and it's not a Douglas fir, kill it," he said, mocking the dominant view of intensive forestry. "When you see some of the harvest units in Western Oregon, it's stunning. They're brown. There's nothing green out there. They've cleaned it all off and then sprayed it, and there isn't anything out there until they get some trees growing again. It's brown-earth forestry."

The consequences of repeated herbicide treatments strike deep. After multiple harvest cycles and the accompanying herbicide sprays, crucial plant species can disappear altogether, along with their seed banks underground and any species-dependent fauna. On steeper, denuded terrain, barren topsoil can slide downslope, complicating forest regeneration.

"To treat such an ecosystem as a farm blows my mind," said Dr. Deke Gundersen, who taught environmental toxicology

> **"When you see some of the harvest units in Western Oregon, it's stunning. They're brown. There's nothing green out there. They've cleaned it all off and then sprayed it, and there isn't anything out there until they get some trees growing again. It's brown-earth forestry."**
>
> — Dr. Jerry Franklin, forest ecologist and University of Washington emeritus professor

Oregon's state forests are often clearcut the same as industrial lands, but sprayed less and allowed to grow longer. AT LEFT Deke Gundersen enjoys the biodiversity and mature Douglas firs in these woods near Forest Grove.

at Pacific University for twenty-three years, where he is now professor emeritus. "Let's cut everything down, replant with the same species, and spray it with herbicides to make sure nothing else grows. I guess we don't want forests anymore, is what we're saying, because to me a forest is a multi-layered, complex, diverse system that provides a variety of benefits for the organisms that inhabit that system and for the people living near that system."

A forest simplified by herbicides cannot work in all of its mysterious, wondrous ways—from cleaning our water and capturing carbon to providing habitat for elk, salmon and other foods. Simplified forests also lie more vulnerable to the effects of climate change, including losing their resilience to, and ability to recover from, wildfire.

Dr. Matthew Betts, an Oregon State University professor and Ruth Spaniol Chair in the Department of Forest Ecosystems and Society, has studied forest biodiversity closely. In 2009, he and colleagues undertook an experiment in Oregon's Coast Range to evaluate the effects of different herbicide regimes: from none at all, to a light, moderate and intensive treatment. They then spent years measuring biodiversity in the form of birds, mammals, insects, replanted conifers and more.

"We found, of course, that herbicides reduce plant richness—that's what they're designed to do," Betts said. "And that does have a bottom-up effect on biodiversity. If you reduce plant richness, you tend to get fewer arthropods, you tend to get reduced numbers of bees, and for some species of birds, the effect was quite negative, especially in the first three or four years of the study, the negative effects jumped out."

While Betts and colleagues found that herbicide treatments increased yield significantly, up to 30 percent under the intensive application, they also observed relatively little overall difference in biodiversity between the "light" treatment—one herbicide spray before replanting—and the non-herbicide control areas.

The Oregon Department of Forestry employs a version of this "light" application on state forestlands. Where seedlings are struggling, a second treatment is applied—last year, about one-third was resprayed. According to John Walter, ODF State Forest Division silviculturist, longer harvest rotations—growing trees for fifty to eighty years—allow for less herbicide.

"It depends on your goals," Walter said. "With state forest, if the goal is an 80-year-old stand at final, we don't need to get those trees rocketing out of the ground by controlling all the vegetation," Walter said. "If it's a little bit slower, that's fine because they will still get to be big, mature trees at 80."

Industrial forestry follows what Betts labeled a "moderate" spray program. Short rotations, between thirty and fifty years, followed by multiple sprays over the course of several years is the typical industrial regime, even though the Douglas fir's growth spurt begins around age 40 and ends at about age 100.

Nearly all of today's industrial timberland owners are some form of investment organization. Return on capital dictates their forest management plans, and market economics require forests be harvested young. Herbicides help speed things up.

"We don't apologize from a private-land standpoint," said Seth Barnes, director of forest policy for the Oregon Forest Industries Council (OFIC), a trade association representing industrial timberland owners. "We're growing trees to meet the world's lumber demand."

Barnes recognizes that by eliminating competitive plants in the early phase of a replanted forest, herbicides prove their value in added tree growth. "Herbicides are an important tool for us to use, and really the only tool in some instances to ensure that the forest is re-established in a timely manner."

In a way, Oregon law encourages the use of herbicides after a clearcut harvest on state and private timberlands. The "free-to-grow" requirement in the state's Forest Practices Act states that replanted conifers must be taller than competing vegetation by their sixth year.

Those opposed to the widespread use of herbicides argue that "free-to-grow" made sense before reforestation was required, but no longer today—modern tree nurseries and replanting techniques have evolved so much that controlling competition with herbicides is unnecessary.

Industrial forestland owners have no complaints about "free-to-grow" because it's already in their best financial interest to replant quickly and efficiently. In fact, herbicides help them attain another state-mandated threshold, the "green-up" rule. Before a stand can be clearcut, that landowner's trees in adjacent parcels must be "free-to-grow." The sooner a clearcut is "free-to-grow," the sooner the neighboring stand can be cut and sold.

Today's short-rotation forestry looks short-sighted to Franklin. "The only people who benefit from it are people who essentially own the forest in order to get a return on investment," he said. "Most small private, non-industrial landowners don't do that. They don't own the land in order to maximize the capital return from that land. They have other values."

ABOVE Nancy Webster, at the Jetty Creek water treatment plant, the source of her drinking water and plenty of controversy. AT RIGHT Oregon's privately owned timberland is a patchwork of young, regrowing stands and fresh clearcuts.

Public and private forestlands provide more than three-quarters of Oregon's municipal water supplies. Yet data on herbicide toxicity goes lacking. For one thing, experiments on humans are not an option. Funding is limited. And testing is problematic because the chemical companies are responsible for testing their own products, and they only analyze the active ingredient, not the actual product.

"It's like the fox watching the henhouse," Gundersen said. "We really don't know a hundred percent how safe they are. Particularly here in the Pacific Northwest, very little, if any, studies look at the direct impacts of these herbicides and related chemicals on human health, especially when it's related to drinking water."

Beyond the direct effects of chemicals, indirect effects from clearcuts and herbicides can also imperil drinking water. Sediment caused by logging roads and by brown, herbicide-treated slopes enters drinking watersheds, especially along the Oregon Coast. When the organic matter in the sediment reacts with chlorine used for disinfecting tap water, chemical byproducts such as trihalomethanes form, and these can cause cancer and reproductive problems.

> **"We really don't know a hundred percent how safe [herbicides] are. Particularly here in the Pacific Northwest, very little, if any, studies look at the direct impacts of these herbicides and related chemicals on human health, especially when it's related to drinking water."**
>
> — Dr. Deke Gundersen, Pacific University professor emeritus

Rockaway Beach sources its drinking water from Jetty Creek, a series of steep drainages just northeast of town. The watershed was intact in the late 1990s, but since the early 2000s, industrial timber companies have removed nearly 90 percent of that forest. Residents began receiving water quality alerts for toxins like trihalomethanes in 2005. Eventually a new $2 million water treatment plant was required to filter out the sediment. The city is now raising funds to buy the watershed.

Rockaway Beach resident Nancy Webster co-founded North Coast Communities for Watershed Protection in 2012, demanding that timberland owners stop logging and spraying in watersheds. Similar groups have since organized up and down the Oregon Coast.

"The industry is deciding what the best protections are for our watersheds," Webster said. In response, Webster, whose father worked in Oregon's timber industry, and other volunteers raise community awareness through actions like circulating petitions against aerial herbicide spraying. "People from the timber industry come up and sign the petition, and it's shocking. They tell us their stories. Some people have been exposed, or some people don't like the clearcutting and fear for their drinking water."

A 2018 survey of Oregon Coast voters, commissioned by OFIC, found similar results—a majority approved of logging, but disapproved of aerial spraying. "Voters who have immediate family employed in the timber industry or are employed themselves oppose aerial pesticides at the same rate as voters overall," the report said.

Oregonians can use their voices, wallets, votes and citizens' initiatives to shape the present and future of forests here. New objectives, like encouraging hardwoods that provide benefits such as wildfire resilience and increased water supply, could be pursued. Prohibiting pesticide spraying, and requiring eighty-year rotations, in drinking watersheds would boost biodiversity while protecting Oregon communities. Incentives not to use herbicides, and community-owned forests, present other options. All of this can coexist with the necessary, respectable task of cutting trees for wood.

Removing the "free-to-grow" requirement would allow small private forestland owners to pass on herbicides, or they could instead harvest trees from their land without relying on clearcutting and herbicides. The easiest way to limit those chemicals is to stop clearcutting, like the federal agencies did forty years ago.

"If our goal is to produce wood, we would extend harvest rotations and then get more wood per acre that way instead of having these super-short harvest rotations with herbicide," Betts said, with a caveat. "The potential consequence is that we need to expand our forestry footprint. If we're not regenerating forests fast enough, it means we need to go somewhere else to get timber. The best thing we can do is to reduce wood consumption, but that doesn't seem to be happening at the moment."

As this century advances, bringing with it greater threats from a changing climate, a re-think of how Oregon uses its forests, a revaluation, is in order. "We need to step back and take a look at our forests, to see what we're really getting from them as a whole, and not look at them as just a source of lumber," Gundersen said. "I think there's a lot more that human beings can gain from our forests than just wood products."

Oregon Department of Forestry
Submitted via
Email to: odf.sfcomments@odf.oregon.gov

Hello Oregon Department of Forestry and Oregon Board of Forestry,

My background involves a Ph.D. in biology from Yale University and an MPH from UC Berkley with a focus on environmental toxicology. I have spent over 45 years teaching at Portland State University, including courses on forest ecology, environmental toxicology, and the principle of sustainability. I have done region wide ground and aerial documentation of forest management on Federal, State, and private lands.

Before discussing my personal input for your process, I would like to emphasize the fundamentally important economic analysis contained the input from Ernie Niemi, President of Natural Resource Economics. He makes many excellent points in his astute economic analysis that badly need to be considered and incorporated into your planning and analysis.

Thank you for your extensive exploration of the many dimensions involved in planning for the operation of the Oregon Department of Forestry into the future. I appreciate this plan's stated focus on Biodiversity as well as watershed health, especially as they appropriately relate to the overarching principle of "Greatest Permanent Value". Yet more needs to be considered, please see my input below.

****

The following is my input for the Final Draft "Western Oregon State Forests Management Plan" which became available in September of 2025:

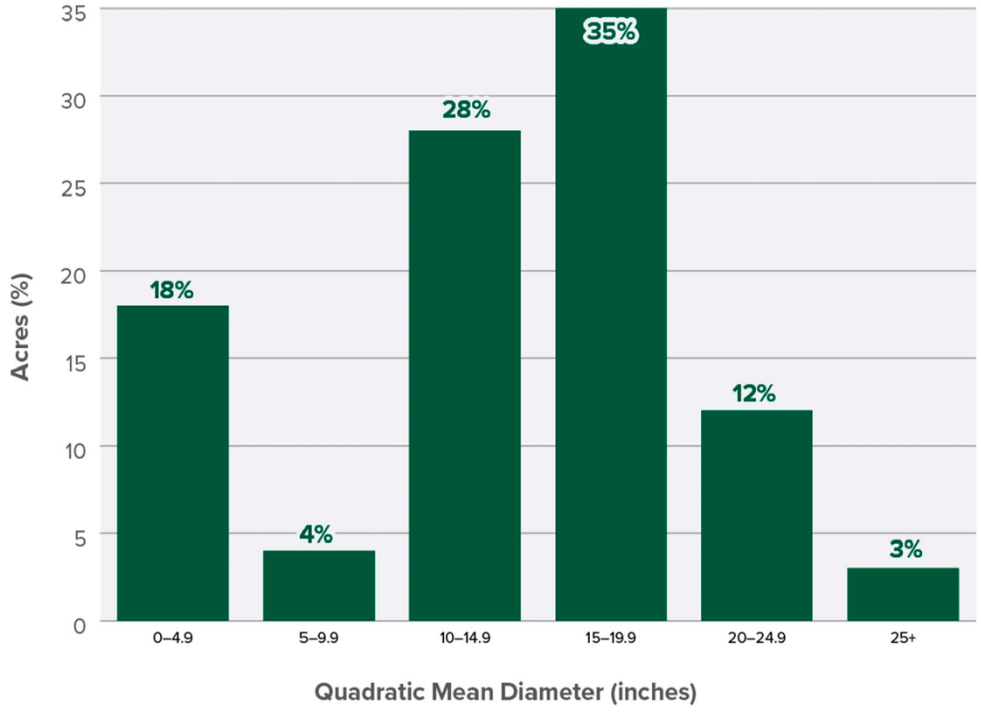
The twin crises of climate change* and drinking water for coastal cities in Oregon cry out for change that is not adequately addressed in your planning document. The solution for both is fundamentally the same. The Oregon Department of Forestry appears trapped by their focus on selling timber (as younger, smaller trees) in order to generate cash flow. Industrial forestry's tree plantations on private lands are making both crises more severe. While there is a glimmer of hope from ODF and the Governor, the Board of Forestry needs to exert its management

influence to address these problems by shifting the emphasis for State Forest management toward older and much larger trees.

Operations of the Oregon Department of Forestry show a clear need for change, especially in relation to climate change. Unfortunately, even with ODF's current knowledge of our need to protect older forests in order to sequester carbon dioxide and mitigate climate change, the ODF 2025 Draft FMP includes logging of older stands of trees. We do not have the time to regrow the old trees that will be optimally effective for carbon dioxide sequestration. Small plantation trees are simply substantially less effective as sinks for carbon dioxide fixation. A course correction is imperative.

I agree with this present planning document's assertion that "The high productivity of forests in the coast range and the Western Cascades make them ideal for climate change mitigation." Unfortunately, the stated age structure of the forests managed by the Oregon Department of Forestry does not presently support actual management consistent with maximizing these forests potential capability for climate change mitigation. A larger portion of ODF lands needs to contain larger diameter trees that have become especially effective at sequestering carbon dioxide, because the trees are over 100 years old. Please note the following Figure from the September 2025 Draft plan document.

FIGURE 3-3
Distribution of Quadratic Mean Diameter of Trees in Western Oregon State Forests.
Quadratic mean diameter may be used as an indicator of the quality of habitat for some wildlife species and tree bole merchantability.



Source: ODF 2022a.

This age structure needs to change toward older and larger trees for effective carbon sequestration. Clearly, the Board of Forestry needs to upgrade the Forest Practice Administrative Rules so that climate change and the required older forests can be part of all forest management decisions for ODF and ideally for private lands as well.

While moving the focus of forest management to older forests that can effectively sequester carbon dioxide is a fundamentally valuable action, there are many additional forest ecosystem services and features that benefit from this management decision:

WATER: Water is a fundamental need for all living things. As such water needs to be recognized as a more prominent feature of "Greatest Permanent Value". Unlike our present situation with tree plantations, older forests provide a more even and reliable flow of quality drinking water. Clearcut, plantation forestry reduces the summer stream flow from a watershed by 50% compared to a watershed covered by forest that is over 100 years old**. In the water supplies for many coastal cities, summer flows of water from watersheds covered by short rotation plantations are becoming inadequate to support their summer tourist-based economies. Older forests could support critically needed summer flows. At a minimum, the

ODF and Board of Forestry both need to protect drinking water more fully by providing wider buffers along all components of a watershed that supply drinking water, so those larger areas can grow older more protective forests. Present stream buffers are fundamentally inadequate to appropriately protect streams in forest watersheds. Ideally, entire drinking watersheds need to have higher levels of protection, so that they can be completely covered by older forest. This will enable the water storing capacities of older forest ecosystems to be fully taken advantage of. Older forests effectively absorb higher intensity precipitation events, which minimizes the flooding that would otherwise occur during the winter months in landscapes covered by young plantations. Instead, the water absorbed by the older forest ends up being delivered by providing a higher flow of water during Oregon's normally dry summer season. In addition, the canopy structure of an older forest enables it to intercept more fog and mist, which significantly increases precipitation in the spring and fall seasons on either side of the dry summer period. The smaller trees in areas of plantations are fundamentally inadequate sources of water from needle drip for decades during their early life, and the bare soil between those small trees contributes to the sediment that commonly impairs water quality in coastal watersheds. That sediment impaired water quality externalizes high treatment costs for coastal cities, something that in fairness needs to be paid for by the parties doing the logging. The more consistent stream flows supported by watersheds covered by older forests also provide better inputs into the limited capacity aquifers that are confined between the coastal mountains and the ocean. These aquifers are very easily impaired by saltwater intrusion, as they are utilized to support the summer tourist economies of Oregon’s coastal communities.

Drinking watersheds also need diligent protection from application of any herbicides, so that their water outputs can be safely used for drinking water. Removing toxins from drinking water is unfortunately very expensive, and as already mentioned, in fairness these kinds of costs should be borne by the forestry operations. Avoiding the use of herbicides, incidentally, also protects aquatic ecosystems and developing salmonids from the damaging impacts of these toxins.

As I close my writing about water, I would urge inclusion of drinking water as a more prominent feature of the “Greatest Permanent Value” discussion in your draft plan document.

BIODIVERSITY: I appreciate your recognition of biodiversity in relation to you discussion of “Greatest Permanent Value”. To repeat: Older forests support and better protect the biodiversity on which forest ecosystems depend. Short rotation plantations represent significant damage to biodiversity; both above ground and in the soil resource. This focus helps address the planetary biodiversity crisis which is very important.

SOIL BENEFITS: Older forests protect and enhance the fundamental soil resource. Logging operations unavoidably cause damaging soil compaction, this harms the soil food web, which is

essential for supporting optimal forest growth. Compacted soil also increases run-off during Oregon's winter rains, thus increasing soil erosion and loss of a fundamental resource for regrowing a replacement forest. In order to maintain Greatest Permanent Value for ODF managed forest lands, forest soils require more time to recover after logging (LONGER ROTATIONS), especially when logging uses ground-based machines. Ideally, the severe compaction impacts of logging machines needs to be avoided in all situations where it is feasible to utilize suspension yarding systems.

FIRE RESISTANCE: Older forests are more fire resistant than plantations, and they will be even more fire resistant when they include areas of deciduous trees. Allowing alder regrowth and/or even planting alder in plantations provides valuable fire breaks, as well as providing invaluable nitrogen fixation for ODF forest ecosystems. I appreciate the use of multiple conifer species in your replanting operations, but more can be done. Remember, the most easily ignited and burned parts of a landscape are the young monoculture plantations of conifers.

POST FIRE VALUE OF TREES: Older trees retain significant economic value after they have been killed by a fire, unlike trees in plantations younger than 25 years. When a plantation of trees burns before about the age of 25 years, it burns easily and represents a total loss of the timber value. In fact, the residue of killed trees is a liability in relation to replanting the fire impacted area. Growing trees for only 35 to 45 years, as is common for both ODF and industrial tree growing operations, leaves a major fraction of the growing period vulnerable to a total loss. For ODF, this would appear to make growing short rotation plantations a violation of the "Greatest Permanent Value" principle.

CARBON SEQUESTRATION IN WOOD PRODUCTS: Logging smaller trees and considering the resulting wood products to be stored carbon is a poor substitute for the carbon fixation accomplished by older forests. Older forests provide valuable, larger wood that is likely to sequester carbon better than smaller wood products, as ODF states in its climate change document. Wood products as fixed carbon is a help in relation to carbon sequestration, however it is not an adequate substitute for the substantial carbon dioxide sequestration accomplished by a forest ecosystem more than 100 years old, where carbon is sequestered effectively by the large trees AND the forest soil.

ECONOMIC IMPACTS**:** Large trees also produce higher quality wood, which is a niche that has special value unique to Oregon's forests. However, the present excessive focus on a resource extraction-based economy has serious liabilities, especially with the increasing dominance of large out of state investors in Oregon's timber industry. When just growing fiber, Oregon's more difficult terrain makes it hard to compete with the easier to manage landscape in the southeast. Remember my previous major section on water for very important economic

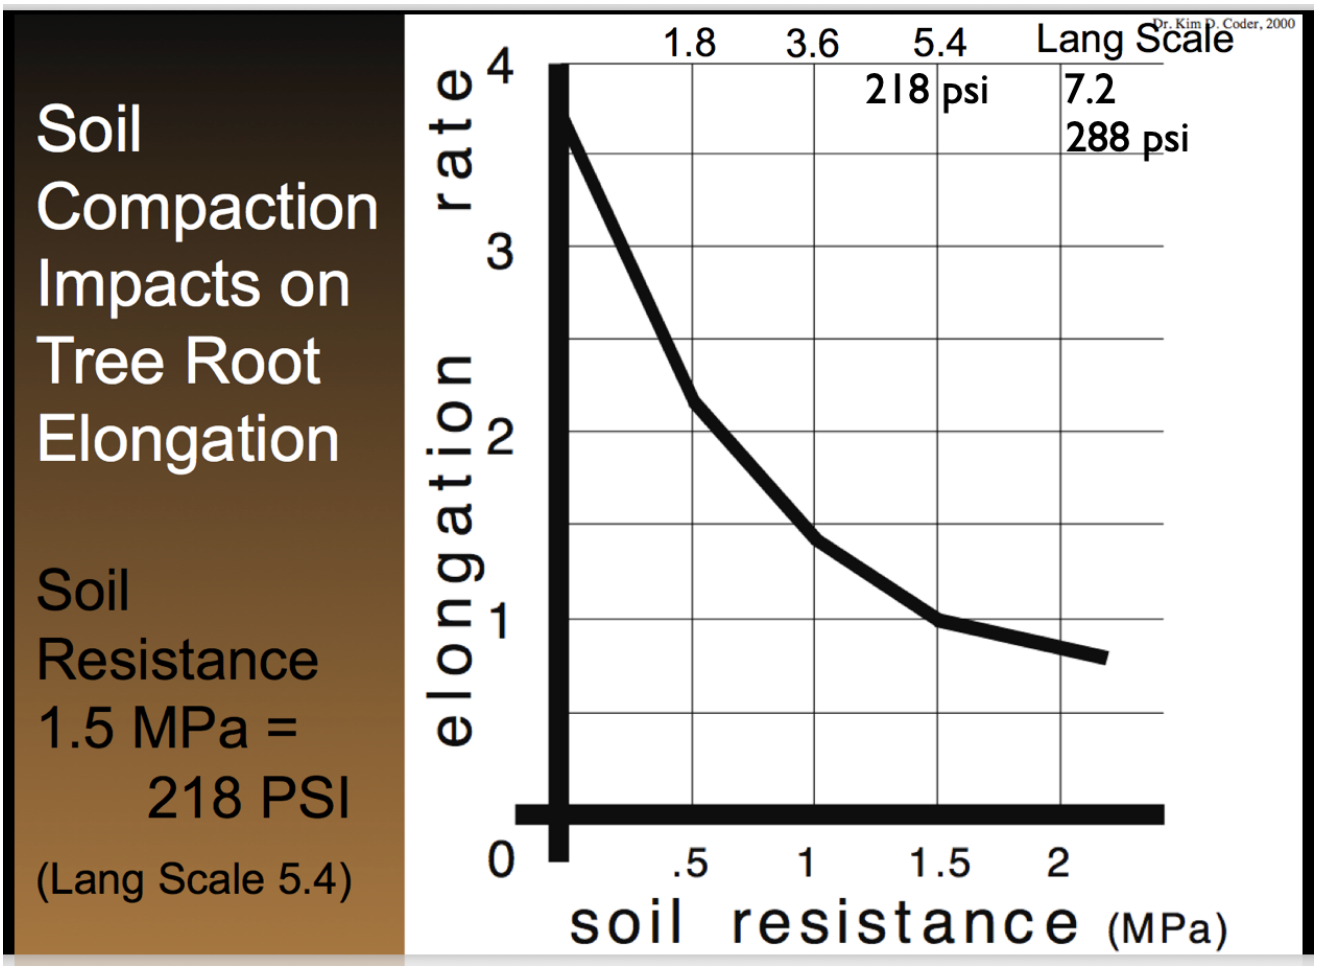
details. For an in-depth analysis, I would remind you again to carefully study the superb economic analysis in the submission by Ernie Niemi, which you should have.

SPIRITUAL AND RECREATIONAL: Older forests provide an important amenity value, through their recreational and spiritual values. This substantial benefit of older forests represents a second paycheck for all Oregonians and is a major factor in supporting a more diversified non-timber related economy. Clear-cuts and tree plantations have a very low recreational value. They provide a disincentive for people to move here and contribute to producing a stronger, diversified economy.

IN SUMMARY: We need to be carefully protecting and growing older and larger trees in Oregon's forest ecosystems. We need to recognize that moving Oregon's forests toward being older, ideally over 100 years old, has significant benefits for ourselves and our future. This will be a challenge that is essential to meet. Resolute action needs to be taken so that change can occur to support the maintenance and growth of older forests in Oregon.

In closing, the following detailed observations of an Oregon Department of Forestry operation are relevant to my presentation. I have done a detailed study of the Homesteader Area 2 logging operation. This area was substantially logged in the spring of 2016. The forest in Area 2 included a significant stand of Douglas-fir trees that showed clear old-growth characteristics, even though an ODF manager insisted it could not be old-growth because the trees were younger than the ODF definition for old growth. The size and ages of those trees were inaccurately characterized in the ODF planning documents, which compounded the bad decision making by ODF. I was personally involved in assessing the area during the planning phase and strongly objecting to logging this area. Also, a large number of Oregonians wrote letters objecting to this logging. The apparent response by ODF was to log this area even more quickly. They even had to rebuild their initial hastily built road system. Area 2 of Homesteader contained a stand of conifers with numerous trees between 4 and 5 feet in diameter that were over 100 years old. This stand should have been fully protected as a site with exceptional carbon dioxide sequestration capacity, as well as the ability to function as a reserve protecting important tree and forest related biodiversity. Forested areas containing trees of these characteristics are unfortunately extremely rare on ODF lands. There were significant numbers of sensitive species in that area of forest. Compounding the damage - - this area was yarded with ground-based equipment, which caused severe soil compaction. This was done even though this site provided an excellent opportunity for cable-based yarding (note, a cable capable carriage even spent some time parked on the site). The ground-based yarding compacted the soil so severely that the planted Douglas-fir seedlings hardly grew during the first 5 years of their lives. Interestingly, the hemlock seedlings grew

much better than the Douglas Fir during those first 5 years. The compacted soil contained almost none of the normal array of organisms that would be found in healthy old forest soil.



Lang Penetrometer readings of 400 to over 600 psi at soil depths of 6 and 12 inches were common in the area of the former stand of old growth trees at Homesteader.

These measurements are consistent with the difficulty experienced by the newly planted Douglas Fir seedlings as they tried to begin growing. Their roots could not penetrate the highly compacted soil. Interestingly, there were a couple of seedlings that were planted in an area where downed logs prevented access and compaction by the ground-based yarding machinery; those seedlings grew to a height of over 4 feet in their first 3 years. Additional impacts of the ground-based yarding included deep gouges in the soil that damaged the roots of many of the leave trees. A majority of the leave trees had their bark damaged near their base, as the large logs were handled.

ODF should not be logging the limited old forest on its lands until more old forest has had the opportunity to develop, because this has very significant long-term consequences for biodiversity, carbon fixation, water quality, and water yield. We do not have the time required to regrow the old trees that will be optimal for the special benefits of an older forest. A course correction is imperative.

Subject: Comment on the Notice of Proposed Rulemaking: Adopt Western Oregon State Forests Management Plan to replace existing Forest Management Plans

Date: January 22, 2026

Thank you for the opportunity to provide a public comment on the *Notice of Proposed Rulemaking to Adopt Western Oregon State Forests Management Plan (FMP)*. Below I argue that this rulemaking process is premature, because the FMP is incomplete.

I would like to note that I previously submitted a version of these comment to the Oregon *Board of Forestry (Board)* as a public comment for their *January 7, 2026, Board meeting*.

At the *Board meeting on September 6, 2023*, ODF presented a *Forest Management Plan (FMP), Adaptive Management Plan (AMP), and Performance Measures (PMs) Update*. The update included ten draft FMP PMs:

- Adaptive Capacity of Forests
- Aquatic Habitat
- Carbon Storage
- Community Engagement and Public Support
- Division Finances
- Economic Opportunities
- Financial Support for Counties
- Harvest and Inventory
- Recreation, Education, and Interpretation Opportunities
- Terrestrial Habitat

The draft PMs included many metrics for several of the PMs, but did not include targets. The associated *presentation for the Board meeting* stated (slide #40), "Targets for Performance Measures anticipated to be set in spring 2024 by the Board." This did not occur.

At the *Board meeting on November 18, 2025*, ODF presented *Western Oregon State Forests Draft Forest Management Plan Scenarios*. The scenarios presented included five draft FMP PMs with targets:

- Harvest Volume
- Revenue from Harvests
- Carbon Storage and Sequestration
- Distribution of Management by Stand Age Class
- Habitat for Covered Species

No explanation was provided for why the new set of PMs differed from the earlier set. In a subsequent private email exchange, State Forests Division Chief Mike Wilson said that the new PMs do not replace the earlier draft. However, there has been no public update on ODF's plan to close on a set of FMP PMs and targets with the Board. In any case, the Board did not make a decision at the November 18, 2025 meeting. The *meeting summary* states: "The board of forestry did not feel they were given enough information to make a decision on the draft Forest Management Plan at this time."

In the *Western Oregon State Forests Management Plan Information Meeting - January 2026* presentation, there is no mention of the AMP, PMs, or FMP scenarios at all. Neither does the FMP draft included in the *Notice of Proposed Rulemaking to Adopt Western Oregon State Forests Management Plan (FMP)* link to the *draft AMP*, *draft PMs*, or ODF proposed *FMP Scenarios*. It takes a very close observer of ODF and the Board to know that these things exist.

I would argue that without a complete and approved set of FMP PMs with targets, the FMP is not a plan at all. It is simply another layer of *vision document*. Depending on how ODF and the Board define, prioritize, and balance a complete set of PMs with targets, implementation of the FMP can have profoundly different outcomes. If the public is to have the opportunity for any meaningful input on the direction ODF takes in the management of Western Oregon State Forests, PMs with targets are an essential component of the FMP. I urge the Board and ODF to postpone or extend the FMP comment period and rulemaking process until PMs with targets are included in the public comment process.

Thank you again for your service and for the opportunity to provide a public comment.

Respectfully,
Scott Killops

You don't often get email from caroltov@pacifier.com. Learn why this is important

Greetings:

I am a 52 year resident, home and property owner in Brownsmead in Clatsop County, OR. I have testified in person, on zoom and by email in the past and continue to be deeply concerned with the issues of forest management, the potential harm to drinking water, salmon, wildlife, clearcutting of older and especially legacy forests like the one adjacent to my property.

The fact that the Forest Management Plan is meant to guide ODF for the next seventy years in its management of our public forests gives extreme import to the FMP.

I am deeply committed to the absolute need to preserve the mature, complex forests which protect us from forest fires and fight climate change by sequestering carbon; and to cease all clearcut timber harvests until healthy mature forests are restored. The HCP is a start but it does not protect enough of the forests. We need specific enforceable standards that the public can track in order to hold the agency accountable through the years. We have witnessed a moving and decimating of the goalposts set by ODF in the past.

In addition, as a resident of Clatsop County for 52 years I am shocked that 46% of our watersheds are listed as impaired under the Clean Water Act. How do you plan to improve the water quality as the law requires? This is a public health issue and calls for immediate attention. Water sources must be protected from sediment, diminished quantity and pesticide/herbicide contamination.

Thank you.

Subject: Adoption of a New Forest Management Plan
Date: Wednesday, January 28, 2026 8:29:20 PM

You don't often get email from maryenglert@yahoo.com. Learn why this is important

To: Oregon Department of Forestry

I am writing to strongly urge you to adopt a New Forest Management Plan that reduces/eliminates clear cutting in Legacy Forestland and implements more sustainable forestry practices that promote healthy habitat for wildlife. This would conform with the already adopted Habitat Conservation Plan of 2024 by the Board of Forestry.

Management that has sustainability as a target, promotes a renewable resource while preserving habitat for fish, amphibians, reptiles, birds and mammals endemic to these mature stands of forest. Ths short term gain of clear cutting has the opposite effect.

Thank you for considering my input.

TO: Interim State Forester Kate Skinner
FROM: Bird Alliance of Oregon
RE: Comments on the Draft Western Oregon State Forests Management Plan
DATE: January 31, 2026

Dear Interim State Forester Skinner,

Please accept these comments into the rulemaking record for the Draft Western Oregon State Forests Management Plan (hereafter Draft FMP), on behalf of Bird Alliance Of Oregon (hereafter BAO) and our over 12,000 members throughout Oregon. BAO is one of oldest environmental NGOs in Oregon established in 1902 with the mission to advance protection of Oregon's habitats and wildlife and to connect people with nature.

We will note at the outset that BAO is signatory to and endorses the more comprehensive set of recommendations submitted by the State Forest Coalition (hereafter SFC). Please accept these comments as an addition to those.

While BAO supports many of the stated objectives contained within the Draft FMP, we have deep concerns and strongly recommend that more work be done to ensure that the finalized FMP meets statutory mandates (eg, OAR 629.035.020 and 030).

We will note that State Forests belong to all Oregonians equally, and polling data from multiple sources[1] shows Oregonians consistently value clean air, clean water, and wildlife habitat over logging uses. Greatest Permanent Value should weight and balance various uses according to what Oregonians consistently rank as the highest values for our shared State Forest lands.

BAO is very concerned about the welfare of listed species that use our state forests. In particular, populations of the federally threatened northern spotted owl and marbled murrelet are in real danger of extinction in Oregon's state forests within the next few decades. BAO has worked for decades to protect both the marbled murrelet and northern spotted owl. In 1988, BAO (formerly Portland Audubon) commissioned a status review that provided the basis for listing the marbled murrelet under the Federal Endangered Species Act. BAO subsequently petitioned and sued the U.S. Fish and Wildlife Service to list the marbled murrelet, resulting in

[1] https://oregonvbc.org/state-forest-management/; https://oregonforests.org/media/2411

the designation of the species as threatened under the Federal Endangered Species Act in 1992. In 1990, BAO filed a petition with Birds Connect Seattle (formerly Seattle Audubon) and others that led to the listing of the northern spotted owl as threatened under the Endangered Species Act in 1990.

The current prognosis for these two species in our State Forest is dire unless we double down and ensure that all relevant forest plans (including this draft FMP) have tangible and actionable measures to allow recovery of these species. As of 2024 population estimates in Oregon state forests indicate 31 individuals for the northern spotted owl and there are are currently 118 marbled murrelet Management Areas (MMMAs), though it is not known if nesting is occurring in all of these MMMAs (data summary provided by ODF staff). Clearly, we are talking about a small number of imperiled birds remaining in our state forests.

Concern: Without halting harvest in mature stands and a real plan to regenerate complex mature forests over the HCP timeframe, both threatened species will likely be extirpated from state forests within decades.

The FMP must provide clearly articulated recommendations for moving both species towards a better trajectory for recovery. We recommend the following actions regarding these two imperiled species:

Recommendations:

- There is currently no mention of the Barred Owl in the Draft FMP. The FMP needs to include a basic plan and timeline for rollout of the U.S. Fish and Wildlife Service's Barred Owl Management Strategy[2]. There is evidence that quality northern spotted owl nesting habitat (i.e. mature complex forest) may buffer spotted owl populations from the impacts of barred owls[3], especially in situations with reduced barred owl pressure[4].
- Likewise, There is currently no mention of a Recovery Plan for neither the northern spotted owl[5] nor marbled murrelet[6] in the Draft FMP. The FMP should include actionable steps to direct implementation of recovery plans for all imperiled species.
- The FMP does not reference ODF's Marbled Murrelet Endangered Species Management Plan developed in 2022 after the Marbled Murrelet was uplisted as Endangered under the Oregon ESA. The FMP must reference this plan and provide clear actionable steps to implement this plan. On a side note, we can not find this full plan in the ODF website (only this presentation is available: https://www.oregon.gov/odf/board/bof/20221116-bof-record-item-02.pdf). Please ensure the full ODF marbled murrelet ESMP is available to the public.

[2] https://www.fws.gov/sites/default/files/documents/2024-08/final-barred-owl-management-strategy-2024_508.pdf
[3] Dugger, K. M., E. D. Forsman, A. B. Franklin, R. J. Davis, G. C. White, C. J. Schwarz, K. P. Burnham, J. D. Nichols, J. E. Hines, C.B. Yackulic, et al. 2016. The effects of habitat, climate, and barred owls on long-term demography of northern spotted owls. Condor 118:57–116.
[4] Wiens, J. D., R. G. Anthony, and E. D. Forsman. 2014. Competitive interactions and resource partitioning between northern spotted owls and barred owls in Western Oregon. Wildlife Monographs 185:1–50.
[5] https://www.fws.gov/sites/default/files/documents/NSO_RevisedRP_2011.pdf
[6] https://www.dfw.state.or.us/wildlife/hot_topics/docs/ODF_MAMU%20ESMP.pdf

- FMP should delineate that MMMAs include no-cut buffers around known murrelet nesting locations of at least 100 meters in size
- The FMP should specify that marbled murrelet monitoring follows the recently updated Marbled Murrelet Pacific Seabird Monitoring Protocol[7].
- We double down on recommendations in the SFC letter calling for:
    - a moratorium on any harvest of mature/old-growth trees (over 80 years of age) in all management areas (within and outside of HCAs) and for real targets set in the FMP to reach the minimum 30-50% mature forest KPM.
    - Impose a moratorium on commercial timber harvest in complex layered forest within the FMP management boundaries until a minimum 30% target of State Forest is classified as complex layered forest type. Develop a strategy to achieve this objective within the finalized FMP's ten year life span.

Concern: As noted in the SFC comments, the Draft FMP is far too vague. It is inoperably lacking in specific goals, strategies, and metrics, particularly with regards to conservation and habitat, climate change mitigation, and recreation objectives.

Recommendations:

- Develop actionable, timebound strategies, with quantifiable metrics to achieve conservation and habitat, climate change mitigation, and recreation objectives.
- These strategies are especially important to fulfill ODF's legal responsibilities to protect, expand and enhance habitat for species of concern such as the northern spotted owl and marbled murrelet. Strategies should not be limited to areas within HCAs and RCAs, but should encompass all State Forest lands to ensure maximum connectivity and success.

Concern: It appears that ODF is continuing to prioritize commercial harvest over other "uses". The narrative of the document suggests that ODF views all management through the lens of how various "uses" affect harvest objectives. This is backwards. Oregonians consistently value conservation objectives over commercial timber production objectives. The finalized FMP, and ODF management philosophy more broadly, should reflect the will of the owners of these lands.

Recommendations:

- Strike Principal 3. Objectives like Principal 3 emphasize commercial logging objectives over other values, effectively forcing ODF to prioritize industrial logging over all other uses.
- Impose a permanent ban on harvest of all trees and forest stands greater than 90 years of age (excepting noncommercial hazard tree removal or for tribal cultural use)

[7]https://pacificseabirdgroup.org/wp-content/uploads/2024/02/A-Revised-Protocol-for-Surveying-MAMU-in-Forests-2024.pdf

Concern: Assertions of additive carbon sequestration through commercial timber production such as “Forest stands and wood products derived from active management contribute to carbon sequestration…”, (Principle 12, page 1-7), “...producing timber that can store carbon in long-lived structures”, and “...areas with a timber production focus contribute to carbon storage in long-lived forest products.” (Section 1.2.3, page 1-12), are directly contradicted by the best available science[8]. The best evidence suggests that commercial timber harvest, especially clearcuts on rotations under 60-80 year cycles, results in net carbon emissions.

Recommendations:

- Strike references containing unproven assertions relating to carbon sequestration services through active management and timber products. With reference to climate goals, the FMP should include specific, evidence-based strategies to minimize net carbon loss from harvest activities, including extending harvest rotation cycles to 80-120 years[9].
- With regards to carbon sequestration, the FMP should emphasize the importance of increasing stand age, prioritizing recruitment and retention of stands aged 100 years or more, and extending harvest rotation cycles to 80-120 years. These “Climate-Informed Silviculture” practices are already laid out in ODF’s own Climate Change and Carbon Plan (CCCP)[10]. While the FMP includes reference to the 5-year old CCCP, ODF has largely not implemented the plan. The FMP must include a clear timeline for implementation of the CCCP with clear benchmarks along that timeline denoted.

Thank you to all involved for the effort that has gone into the creation of this Draft FMP. We recognize and appreciate the complexity and thoughtfulness involved, and we appreciate the opportunity to help the finalized FMP reflect the highest values of Oregonians.

Thank you for considering these comments.

Council of Forest Trust Land Counties
1212 Court St. NE | Salem, Oregon 97301

Board of Forestry

Re: Draft Forest Management Plan comments

The Council of Forest Trust Land Counties (CFTLC) represents the 15 counties that, in the 1940s, deeded their forest land to the state for long term management and in exchange receive revenue from said State Forest Lands. CFTLC is represented by county commissioners elected by their peers to the Forest Trust Land Advisory Council (FTLAC). FTLAC has a statutory responsibility to advise the Board of Forestry (BOF) and the State Forester on matters which affect management of the State Forest Lands (ORS 526.156). This comment letter on the Draft Forest Management Plan (Draft FMP), in part, fulfills this duty.

The BOF and the Oregon Department of Forestry (ODF) have a responsibility to manage State Forests for Greatest Permanent Value (GPV), as defined in OAR 629-035-0020. When reviewing the Draft FMP for adoption (as required by OAR 629-035-0030), the BOF should consider:

- Publicly mandated social services provided by counties and taxing districts which depend on revenue generated from these Trust Land Forests.
- The combination of the FMP and the Habitat Conservation Plan (HCP) will constitute a significant commitment to habitat conservation for species of all types, including species listed as threatened and endangered, as well as unlisted species.
- Harvest modeling associated with performance measure development shows state forests can be managed in a way that maximizes biological productivity for timber on land available for harvest while maintaining approximately 80-year rotations, which results in less harvest area and more diverse forest conditions than other harvest options. A presenter invited to the BOF called 80-year rotations "a core tenant of carbon-informed forestry."[1]
- The State Forests offer an important recreational resource for Oregonians. Maintenance of recreation facilities ensures they remain safe, enjoyable, and environmentally sound, and these are paid for by revenue generated on State Forests.
- Timber produced on State Forest lands supports manufacturing jobs. Preserving manufacturing jobs is a strategic goal for the governor. [2]

Below are our comments related to each of the Draft FMP principles

PRINCIPLE 1 – GREATEST PERMANENT VALUE

[1] https://www.oregon.gov/odf/board/bof/20230308-bof-item-06.pdf (pg. 8).
[2] https://www.oregon.gov/gov/Documents/Oregon's_Prosperity_Roadmap_December_2025.pdf

CFLTC supports the management of State Forests, consistent with state law. The Draft FMP principle of Greatest Permanent Value does not fully express the relationship between the Greatest Permanent Value and forest management planning OARs (OAR 629-035-0020, and OAR 629-035-0030). The Draft FMP states, "The FMP will be grounded in the management mandates for BOFL as expressed in the GPV and Forest Management Planning OARs" (pgs. 1-2). However, the management of the State Forests is not merely "grounded" in these OARs. The OARs explicitly provide the direction for the management of the State Forests. The State Forest is expressly directed to "secure greatest permanent value" in OAR 629-035-0020(2). The Board is directed to "review and may revise the forest management plan developed by the State Forester to ensure that it is consistent with OAR 629-035-0020 (Greatest Permanent Value)" (OAR 629-035-0030(4)). All management activities must be assessed against these rules.

CFTLC recommends the FMP principle be revised to state, "The FMP will establish the framework for managing the BOFL for Greatest Permanent Value." This language is consistent with OAR 629-035-0020(1), that describes the forest management plans.

PRINCIPLE 2 – BIOLOGICAL DIVERSITY

Managing, conserving, and restoring State Forest lands contribute to achieving the Greatest Permanent Value benefits listed in 629-035-0020(1). ODF has made a significant conservation commitment with the HCP. The management actions enumerated in the conservation measures in the HCP will result in conservation and restoration of State Forests for biodiversity. These measures include active restoration for Swiss needle cast affected stands, aging alder stands, young stands in Habitat Conservation Areas (HCAs), passive management in HCAs and Riparian Conservation Areas (RCA), contributions to a conservation fund, and maintenance of forests to support dispersal of species outside of HCAs and RCAs.

CFTLC supports managing forests outside of HCA, RCA, and inoperable areas for harvest on rotations that maximize long-term volume production. As described by Dr. Kate Anderson from the Sightlines Institute, on invitation of the Board of Forestry, long-term volume production is maximized by harvesting at the culmination of mean annual increment, or around 80 years for forests in the region. Dr. Anderson recommends pairing these rotations with an HCP to mitigate risks that this rotation strategy could create, exactly like the strategy ODF is taking.[3] While the focus of the HCP is necessarily on federally listed threatened and endangered species, the HCP will provide significant benefits for many species. Conservation of older forests inhabited by species like the northern spotted owl and marbled murrelet, benefits all species that use these

[3] https://www.oregon.gov/odf/board/bof/20230308-bof-item-06.pdf (pg. 20)

forests. Likewise, riparian species benefit from riparian conservation measures as well as from broader upland conservation. Under the CFTLC-supported performance measure for timber harvest, State Forests will develop a roughly balanced age-class distribution, up to age 80, which will provide forest conditions for species that utilize forests in a range of structural conditions.

One aspect of the principle we believe to be incorrect is, "The GPV and Forest Management Planning rules are the BOF's expression of providing conservation." This misstates the relationship between the BOF and Oregon Administrative Rule. It is much more than that. The GPV and Forest Management Planning rules are the expression of the state's direction to the State Forester for managing State Forests. These rules define the management objective and the procedural methods planning. These rules cannot be changed in the FMP. These rules also define the BOF's responsibility to review and approve the plan.

PRINCIPLE 3 – REVENUE

Ensuring sufficient revenue is available to ensure provision of GPV is a fundamental responsibility of the ODF and the policy direction set by the BOF in the FMP. Without adequate revenue, the principles in the FMP cannot be implemented by the State Forester. Failure to provide GPV would be a loss to all Oregonians, a violation of statute, and undercut the agreement between the counties and the state entered into when the lands were deeded to the state in Trust over 50 years ago. Oregon law states that the state has a responsibility to "maintain these lands [State Forests] as forest lands and actively manage them in a sound environmental manner to provide sustainable timber harvest and revenues to the state, counties, and local taxing districts" (OAR 629-035-0020). Not doing so would be inconsistent with state law.

Currently, Oregon statute (ORS 530.110) allocates ODF a share of the revenue from State Forest management, with the remainder going to counties, schools, and taxing districts. This revenue is used to fund operations on State Forests. Periodically, the BOF receives input that this funding mechanism should change. CFTLC worked with the Governor's Office to change the funding split to better fund the department. The Governor's Office chose not to pursue CFTLC's proposal or bring any other proposal to the legislature, indicating that a change in funding was not needed. The FMP must reflect current law. Current law is that ODF is funded from revenue generated from State Forests. The BOF must direct the State Forester to implement the FMP in a manner that ensures adequate funding to provide GVP. The State Forester must then implement the FMP in that manner.

CFTLC remains committed to working with ODF to help ensure adequate staffing to achieve GPV, provided the BOF approves our alternative for the timber harvest level performance measure that we presented in our testimony to the BOF on November 18, 2025. Our alternative

is based on modeling by ODF staff, who used the best available information about current conditions in the forest, future growth, and environmental and social commitments expressed in the Draft Habitat Conservation Plan and Draft Forest Management Plan. It also gives ODF the flexibility to operate under current staffing and funding levels while ODF builds capacity to fully provide GPV. **Selecting one of the other performance measure alternatives for the timber harvest level would result in underfunding of the department, counties, schools and local taxing districts which will result in a failure to ensure the provision of GPV.**

PRINCIPLE 4 – SOCIAL BENEFITS

The ability to provide social benefits for all Oregonians is consistent with direction in the Greatest Permanent Value rule. Also stated in the Greatest Permanent Value rule is that: "To secure the greatest permanent value of these lands to the state, the State Forester shall maintain these lands as forest lands and actively manage them in a sound environmental manner to provide sustainable timber harvest and revenues to the state, counties, and local taxing districts" (OAR 629-035-0020(2)). The developers of the OAR envisioned active management and revenue production as a means by which to secure Greatest Permanent Value**. CFTLC supports the provision of social benefits from State Forests. We believe key social benefits include:**

- **Revenue for publicly mandated county social services.**
- **Local employment by public service providers, local manufacturers, local tourism operators, and others.**
- **Public access to State Forest lands and all the benefits this provides.**
- **Maintenance of healthy, productive, and sustainable forest ecosystems that, over time and across the landscape, provide a full range of social, economic, and environmental benefits to the people of Oregon (OAR 629-035-0020)**

The *Economic Analysis of ODF Western Oregon Forest Management Plan Scenarios* report by ECONorthwest, produced for ODF, listed a range of social benefits and did not show any difference in social benefits between management scenarios. Based on this result and data provided to ODF, it is clear that ODF's "maximize volume" scenario provides all the social benefits required. **CFTLC's proposed performance measures would support implementation of this scenario.**

PRINCIPLE 5 – FOREST AND WATERSHED RESTORATION

This principle is consistent with the significant conservation commitment codified in the HCP. Between the HCP, FMP, and forest practices rules, over 50% of State Forests will be in conservation status. CFLTC analyzed the distribution of streams on State Forest lands and found

that 45% of fish bearing streams and 41 % of non-bearing streams are located within Habitat Conservation Areas. Fully, 54% of salmon, steelhead, and bull trout (SSBT) streams are in HCAs. These streams by virtue of being in HCAs will be far removed from operations and any potential impacts that are not mitigated by standard RCA buffers. Additional streams are located on the more than 70,000 acres of land identified by ODF as inoperable. Outside of these areas, streams and waterbodies are protected by riparian buffers that are larger than those required by new forest practices rules that originated from the Private Forest Accord, and which will become a core conservation measure of an HCP, pending federal approval. The State Forest HCP buffers are designed specifically to ensure that cool water temperatures are maintained for salmon and other fish, and to protect salamander habitat.

An easily overlooked part of the HCP, but one that possibly provides the most value to in-stream habitat conditions, are new rules for road construction and water crossings. No longer will roads block fish movement within streams or deliver un-mitigated sediment to the streams.

The need for forest restoration of State Forests is substantial. The BOF has long been concerned about the extent of Swiss needle cast-affected stands (46,000 acres) and aging alder stands (50,000). In addition, the HCP places approximately 50,000 acres of plantation forest under 40 years old in HCAs. These young stands will need thinning to fully achieve their habitat potential. Unfortunately, restoration treatments are limited in the HCP to a maximum of 75,000 acres over 30 years compared to at least 146,000 acres in need of restoration. CFTLC advocated for a more flexible restoration objective within the HCP, to allow ODF to both meet the current need for restoration and to respond to future needs, which was not considered by the BOF or ODF. **CFTLC recommends maximizing restoration treatments consistent with the HCP, to ensure the conservation objectives of the HCP are achieved.**

CFTLC also recommends restoring State Forest lands impacted by fire so they can provide Greatest Permanent Value. The USFS and private landowners in western Oregon are actively implementing fuels management projects. CFTLC recommends ODF to do the same, to protect communities and natural resources.

Principle 6 – Pace and Scale

CFTLC recommends amending this principle, which currently states: "The FMP will be developed and implemented on a scale and at a pace that provide a geographic and temporal range of economic, social, and environmental benefits," to acknowledge that the HCP effectively puts a brake on both the pace and scale of implementation. The principle should add that the FMP will be implemented consistent with the HCP. CFLTC notes that there may be

occasions where faster-paced or larger-scale implementation of activities (e.g., restoration treatments discussed under Principle 5) would provide greatest value, but this value must be foregone, due to HCP commitments.

Principle 7 – Varying Levels of Outcomes

CFTLC understands that ODF's budget will vary over time for reasons beyond the department's control. However, we note that it is the BOF's responsibility to "review and may revise the forest management plan developed by the State Forester to ensure that it is consistent with OAR 629-035-0020 (Greatest Permanent Value)" (OAR 629-035-0030(4). It is the State Forester's responsibility to "manage forest lands as provided in this section by developing and implementing management plans for a given planning area, as provided in OAR 629-035-0030 (Forest Management Planning) to 629-035-0100 (Existing Long-Range Plans)" (OAR 629-035-0020(4)). **Direction by the BOF that would foreseeably result in an inadequate budget to provide Greatest Permanent Value may be inconsistent with state law, as it is the BOF's responsibility to ensure ODF is operating in a manner to provide GPV. The CFTLC performance measure proposal puts ODF in the best position to provide Greatest Permanent Value, by providing ODF with the largest budget possible, without negatively affecting other values.**

Principle 8 – Legal and Regulatory Compliance

CFTLC supports the principle to comply with state and federal laws and rules.

Principle 9 – Tribal Outreach and Engagement

CFTLC supports the FMP principle to, "reach out to and engage with the nine Federally Recognized Tribes of Oregon throughout the planning and implementation processes." We request that ODF continue to clarify what actions taken under this principle differ from those required by law.

Principle 10 – Diverse Input

CFTLC supports the principle of seeking diverse input from Oregonians. As your partner in State Forest Management, CFTLC will continue to provide input towards achieving this principle. We appreciate the opportunity to provide input on various plans put forth by ODF, including this Forest Management Plan, Implementation Plans, Annual Operations Plans, and the Habitat Conservation Plan at FTLAC meetings, testimony at BOF meetings, Joint BOF-FTLAC meetings, and written comment periods. However, while many opportunities are provided to submit comments, we note that ODF has a history of soliciting public input late in the planning

process, reducing the opportunity for the public to affect policy. For example, public comment, including our own, on the proposed HCP occurred after an HCP application had been submitted to the federal services. This limited the opportunity for public comment to result in meaningful changes to the HCP. Additionally, CFTLC requested the ability to participate in Habitat Conservation Plan development, as partners in State Forest management, but CFTLC was denied this opportunity. **We hope this principle results in a restructuring of ODF's public input process to allow for more effective and earlier engagement.**

Principle 11 – Cooperative Efforts

CFTLC supports the principle to "achieve goals through cooperative efforts with other agencies and units of local government, user groups, and organizations." As your partner in State Forest management, CFTLC is ready to contribute to achieving this principle.

Principle 12 – Managing for Climate Change

CFTLC believes managing State Forest lands to account for climate change is vital to maintaining the ability to provide Greatest Permanent Value. Climate change poses a threat to the State Forests in the form of increased incidence of disturbance events and changes in productivity. Impacts could be felt across multiple benefits provided by the State Forests. State Forests should take the threat of increased disturbance seriously to protect all values, not the least of which is the significant conservation commitment proved in the HCP in the form of Habitat Conservation Areas. ODF should also protect communities surrounding state forests from potential disturbance impacts, particularly fire impacts, which can damage homes, property, and human health. **Active management will be key to ensuring the State Forests continue to provide Greatest Permanent Value even as they are impacted by climate change.**

ODF should also consider the climate mitigation value of wood products. In addition to directly storing carbon, the use of wood products often replaces more carbon intensive products. Nowhere is this more apparent than in mass timber applications, but the benefits are not limited to carbon sequestration and intensity avoidance. Mass timber applications require raw materials that match the quality that would be produced by State Forests under the CFTLC alternative for performance measures.[4] Providing this material would support local mass timber manufacturing. Preserving manufacturing is a strategic goal of the governor.[5]

Council of Forest Trust Land Counties
1212 Court St. NE | Salem, Oregon 97301

Recent news from Portland highlights the state of mass timber in Oregon. Oregon's tallest mass timber building was recently completed. The 12-story building provides affordable, supportive housing to older adults in downtown Portland.[6] The building was designed and built by local companies. However, the mass timber material was harvested and produced in British Columbia.[7] This building highlights a key issue before the BOF. **As the BOF considers performance measures associated with the FMP, the BOF has the opportunity to support local timber production and local manufacturing. Conversely, the BOF can choose to harm local manufacturing and make Oregon more dependent on wood product imports, and at the same time reduce the number of family wage jobs available in our communities and reduce funding to community social services. CFLTC believes in supporting local communities. The BOF should too.**

Thank you for the opportunity to provide comment on the proposed FMP draft available for comment. Please feel free to reach out with any questions you may have about the recommendations above.

Subject: Changes needed in draft Western State Forest arrangement plan
Date: Wednesday, December 17, 2025 9:25:08 AM

You don't often get email from lbhikes@msn.com. Learn why this is important

As a hiker, snow shoer, mountain climber & cross-country skier I am in the forests of Oregon once or twice a week. The changes I see in our forests are very sad. Please consider the below suggestions from scientists.

The Western State Forest Plan to be based on the best science available, as required under existing law.

Require accountability and compliance with applicable laws, policies & plans adopted by the Board of Forestry.

Remove from the State Forest requirements that promote logging over all other uses of State Forests. Recreation & preservation of our intact forests should be a priority. As our glaciers are melting off, please use the science to preserve our old growth as carbon sink.

Restore healthy mature forests. Halt clear cuts in old growth forests stands on N coast state forests until 30% of the forests are in the condition as required by current rules & policies. Promote clean drinking water for salmon and human consumption. Develop restoration plans for watersheds with impaired water quality.

Carbon storage should be a priority, so old growth & intact forests are preserved.

Our state forests should place a priority on practicing climate-smart forestry. Climate-smart forestry involves optimizing carbon sequestration, storage and resilience while minimizing greenhouse gas emissions. Practices include protecting our mature and old-growth trees, growing trees longer, and maintaining a diversity of species, ages, and structures. Western Oregon's state forests—more than 630,000 acres from the crest of the Cascade Mountains to the Oregon Coast—are vital to the survival of wild salmon in Oregon. These public forests also provide clean drinking water to 500,000 residents, habitat for threatened wildlife, recreation, and a tremendous capacity to absorb carbon to mitigate climate change.

Thank you.

Bring balance back to state forests: Delete or amend the draft FMP which requires revenue from timber harvest to fund all of state forest management activities, which prioritizes logging over all other values in state forests.
Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

RE: Clatsop County Comments on Draft FMP – Supporting Balanced and Sustainable Forest Management

Chair Kelly and Interim State Forester Kate Skinner,

The Clatsop County Board of Commissioners appreciates the opportunity to provide comments on the Oregon Department of Forestry's draft Forest Management Plan (FMP). We support efforts to ensure state forest lands are actively managed to achieve Greatest Permanent Value (GPV) and urge the Board of Forestry to adopt the Council of Forest Trust Lands Counties' (CFTLC) recommended performance measures to ensure effective implementation.

Maintain Working Forests and Support Rural Communities

Clatsop County strongly supports the continued management of state forests as working forests. These lands are critical to sustaining rural economies, providing family-wage jobs, and generating essential revenues that support counties, local taxing districts, and public services, including schools. In recent years, timber revenues from state forests have contributed between $22 and $25 million per year to local governments, special districts, and schools in Clatsop County, highlighting the tangible benefits of active forest management for our community. State forest management decisions have a direct and meaningful impact on our ability to meet publicly mandated responsibilities.

Greatest Permanent Value Requires Active Management

The FMP is ODF's primary statement of how it will manage state forest lands to achieve GPV, as defined in OAR 629-035-0020. Oregon law is clear that GPV means healthy, productive, and sustainable forest ecosystems that provide a full range of social, economic, and environmental benefits over time to the people of Oregon. Importantly, this includes the sustainable and predictable production of forest products that generate revenue for the State, counties, and local taxing districts (OAR 629-035-0020(1)(a)). The rule envisions achieving this through active management, directing the State Forester to

manage these lands in a sound environmental manner to provide sustainable timber harvests and associated revenues (OAR 629-035-0020(2)).

Promote Sustainable Forestry and Ensure ODF Financial Stability

The Legislature has reinforced this direction by authorizing the State Forester, under ORS 530.050, to use active management tools to secure GPV. Revenue from state forests also funds ODF's operations. While alternative funding approaches have been discussed, no substitute mechanism exists in statute. Active and balanced forest management is therefore essential to sustaining forest health, providing climate-friendly wood products, and ensuring ODF remains financially self-sufficient without additional burdens on taxpayers.

Restore Balance and Reject Unnecessary Restrictions

The County supports a balanced approach, noting that current state forest management already exceeds many environmental requirements. The Habitat Conservation Plan (HCP) currently under federal review represents a significant conservation commitment, fulfilling Endangered Species Act obligations while guiding restoration on thousands of acres affected by forest health challenges. Additional conservation set-asides or restrictions beyond those in the proposed FMP are unnecessary and could further reduce harvest levels, negatively impacting rural communities and county revenues.

Counties as Partners in State Forest Management

Counties are long-standing partners in state forest management. There is a direct link between forest revenues and our ability to provide essential public services. Management under the proposed FMP can deliver this revenue, particularly if implementation follows the performance measure alternative proposed by the CFTLC. Modeling conducted by ODF and analysis by ECONorthwest demonstrate that the proposed plan can achieve GPV while generating sufficient funds for ODF to deliver on this promise.

For these reasons, Clatsop County supports the proposed Forest Management Plan. We urge the Board of Forestry to approve the plan and to adopt the Council of Forest Trust Lands Counties' alternative performance measures. These actions will ensure that counties are funded, habitat is protected, streams are restored, recreation is supported, and ODF has the ability to manage state forests consistent with the statutory mandate of GPV.

Thank you for considering Clatsop County's comments and for your continued stewardship of Oregon's state forest lands.

Sincerely,

Mark Kujala, Chair
Clatsop County Board of Commissioners

RE Harvesting: Old growth stands should be preserved as they provide unique biomes that support numerous plants and animals.

RE Replanting: Instead of replanting with monoculture Douglas Fir trees, plant a mix of species including Sitka Spruce, Western Hemlock, Western Red Cedar, Grand Fir, Western White Pine, Port Orford Cedar, Alder, and Maple. This will encourage biologic diversity in the plants and animals that live in the forest.

Thank you for offering Oregon citizens an opportunity to comment on the Forest Management Plan. I have one simple request: I ask that consideration for the public's drinking water sources be addressed in the plan. Please protect all our drinking water sources from excess sediment runoff, pollution, including pesticides, and timber removal practices that result in unseasonably drying up water sources.

To whom it may concern at Oregon state forests and beyond:

These are my comments on the management plan for Oregon state forests. Thanks for this opportunity to comment on the management of these state forest lands which include important remnant mature legacy forests in the coast range of Oregon which are essential for the survival and recovery of the federally-"threatened" *Brachyramphus marmoratus*. These state forests are notably the most biologically significant stands of mature forest especially in northwestern Oregon. To prove how significant these stretches of temperate rainforests are, I'm sure some of you are aware of the generally demarcated 6 conservation zones for the Marbled Murrelet – sometimes referred to as Marbled Murrelet Recovery Zones.

I want to point out that the STATE FORESTS of OREGON are THE MOST IMPORTANT JURISDICTION for the RECOVERY (or demise) of the Marbled Murrelet as far as their population in the Lower 48 in the LARGEST GAP between zonal murrelet recovery designations. Basic conservation biology points out the necessity for different geographic areas to intermingle for the health of the genetics of the species if they are to be viable in the future. Seeing that there are relatively few old-growth forest acres remaining in the Siuslaw National Forest, while most private timberland in the area has been decimated repeatedly and then sprayed with toxic herbicides upon monoculture replanting.

With a larger geographic overview, I shall point out that there are only smatterings of murrelets in the sizable distance between the general Olympic National Park Area (which is generally MMRA 1 but overlaps a little into MMRA 2) and the Siskiyou Coast MMRA which is Zone 4.

With a more localized geographic overview, obviously it is important to bolster murrelet populations in each of their recovery zones along the U.S. West Coast, as a necessary prelude to a more diverse genetic connection for murrelets in this region. This is likely the only way to seek to recover numbers such that there are some brave murrelets seeking out new nesting and forest habitat including in a neighboring MM Conservation Zone.

To put it bluntly, murrelet numbers (thus indicating pathetic acreage left of ancient and even mature forests) are quite low in the heavily cutover Western Washington Coastal Conservation Zone and also in the Oregon Coast Range zone. That appears to indicate that the state forests of Oregon with its well over 600,000 acres are essential if there is to be any success in marbled murrelet recovery along the coasts of Washington, Oregon, and some of

California.

There are 17 species that need help to recover – rather than carry on business-as-usual at Oregon state forests. It is my understanding that current regulations call for at least 30% of their state forestland to be in a multi-layered forest stands. Despite not reaching this 30% objective, yet there is still widespread clearcutting of older (relative to what remains) forests which these days are the mature legacy forest stands. Please Delete or Amend what is called Principle 3 in the Draft Forest Management Plan which requires timber harvest revenues on state forests to prioritize logging over conservation values in management of those very state forests..

Are there plans to abide by requirements calling for a minimum of 30% multi-layered mature forests on the state forestlands?

Kindly add to the FMP a plank which requires ALL actions obviously including forest management-related activities to ABIDE BY BEST AVAILABLE SCIENCE. There must not be further fragmentation in these hydrologically and biologically significant forests.

Of course you likely realize there about 300 different species on the lands within the jurisdiction of Oregon state forests. Try to maintain most of these while specifically nurturing murrelets and northern spotted owls.

In regards to recovery or demise for the Northern Spotted Owl, the worst the gaps are between the Marbled Murrelet Conservation Zones (and especially between MMCZ 1 and MMCZ 4) in NSO populations, the more difficult it will be to achieve a viable population in order to increase likelihood of increasing genetic diversity by migrating to another MMCZ to find nesting and marine habitat as well as a mate. And the more likely the Barred Owl is to increase their range to the detriment of the marbled murrelet which is supposed to be a mandate to protect and recover.

The forest management plan needs to be guided by Best Available Science and certainly must include a Habitat Conservation Plan which has well-considered strategies for recovery of various species such as the murrelet, northern spotted owl, some amphibians, native fish species, etc. Please make sure that the scientists such as conservation biologists and water quality experts are integral in crafting a wise plan to guide forest management in the forests in the coastal zone of the Pacific Northwest where forests can grow about as quickly as anywhere due to unique hydrological and carbon-storing significance. Sound and best available science would focus on protecting prime habitat, as well as in seeking to recover the population by re-connecting the murrelet recovery zones, etc.

There needs to be more focus on improving water quality for imperiled native salmon runs,

for amphibians, and for other species as well as for human communities (including some indigenous) which rely on the resources of neighboring often public lands for sustenance.

Thanks for your consideration of these concerns, and best wishes to recovery of the 17 listed species you are required to help recover and can be a positive force if you adopt a FMP which includes a Habitat Conservation Plan and is guided by Best Available Science to lead the recovery of these species especially in northwestern Oregon.

Sincerely yours,

Bruce Campbell

Dear Justin Butteris,

I am writing in response to the draft of the new Wester Oregon State Forest Management Plan (FMP). I applaud a plan that incorporates climate change considerations, and increasing impacts of wildfire, drought, and pest outbreaks on forest ecosystems - as well as a plan that includes strategies for adaptation, resilience, and carbon storage in dedicated conservation areas and through sustainable wood products.

Important points to consider for the FMP:

<!--[if !supportLists]-->• <!--[endif]-->Use science based actions

<!--[if !supportLists]-->• <!--[endif]-->Amend FMP to require compliance with applicable law, policies and plans and performance measures adopted by state legislature or Board of Forestry

<!--[if !supportLists]-->• <!--[endif]-->Delete or amend Principle 3 in the draft FMP

<!--[if !supportLists]-->• <!--[endif]-->Halt clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies

<!--[if !supportLists]-->• <!--[endif]-->Keep waterways clean and healthy for aquatic life by restoring impaired waterways to healthy levels

<!--[if !supportLists]-->• <!--[endif]-->Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program

<!--[if !supportLists]-->• <!--[endif]-->Commit to protecting threatened and endangered species

Thanks so much for your efforts. Let’s push to protect Oregon’s natural environments for the sake of our future and for the good of all.

Sincerely,

Laura Craig

Hello,
I am writing to submit a public comment on the proposed Western Oregon State Forests Management Plan.

My concerns are as follows:
1. The plan does not do enough to address logging in mature/old-growth forests. There should be no more logging within mature/old-growth forests on State Lands, period.
2. Older forests should be restored and/or allowed to mature until at least 30% of the landscape are in this condition, as required by current rules and policies.
3. Reduce reliance on large scale clearcutting especially for revenue generation.
4. Focus on thinning and reducing fuel load in second growth forests close to existing roads and communities.
5. Commit to the recovery of endangered species.

Thank you

COMMENTS on THE PROPOSED WESTERN OREGON STATE FORESTS MANAGEMENT PLAN

Richard ODonnell

dickodonnell[AT]earthlink.net

* * * * * *

Introductory remarks

The Department of Forestry (ODF) has provided commendable detail and applied great care to the production of the proposed Forest Management Plan (PFMP). My brief comments apply only to lumber production and subjects associated with that function.

The state of Oregon owns a little over 1 million acres (1,095, 895 acres) of the nearly 30 million acres of forest in the State. Management of those acres to produce the Greatest Permanent Value is not entirely within ODF's discretion because the state's management is not independent of exogenous events. Just as *Adaptive Management* must accommodate the exogenous effects of climate change, it must accommodate the exogenous effects of federal forest policy as it effects Oregon's forests and people. In other words, a perfect FMP for the state-owned forests of Oregon, perfectly executed, will not deliver the intended outcomes because federal forest policy overpowers it. Current federal forest policy is extremely destructive and federal forests are far larger than state forests. The magnitude of federal destruction must not be supplemented by destructive state policies. Oregon's state forestry can partly offset the destructive effects of federal forest policy by refraining from timber production.

State owned forests are managed to maximize the sustainable value of the forests for all of the people of Oregon.

The key to achieving the maximum sustainable value of state-owned forests is to

suspend timber production in state forests for three years and to retain forests intact to produce unquantified benefits – carbon sequestration, improved water quality, etc.-- for the people of Oregon. My comments are about producing benefits through conservation; the message is embodied in the following statement:

"…STATES ARE NOT ONLY PERMITTED BUT OBLIGATED TO CONSIDER REVENUE GENERATION THROUGH CONSERVATION OR OTHER NONCONSUMPTIVE USES TO MEET

THEIR ENDURING TRUST RESPONSIBILITIES." (Stoellinger 2025)

Comments

The proposed Forest Management Plan is an acceptable, if vague, outline of ODF's future forestry operations in all respects except lumber production. A unique combination of events -- accelerating climate change, abnormally large wildfires and the magitude of the Trump administration's assault on Oregon's forests -- is pushing Oregon's forests to near depletion. Such depleted forests cannot perform their erosion control, water quality and carbon storage functions effectively. If ODF implements the volume of logging the Proposed Plan envisions it will contribute to the decline in water quality and carbon storage. I PROPOSE THAT ODF SUSPEND LUMBER PRODUCTION UNTIL THE FEDERAL FORESTRY AGENCIES REDUCE THEIR LUMBER PRODUCTION TO LEVELS consistent with recent levels. Suspending timber production in state forests will partly offset the loss of standing timber, particularly the loss due to federal forestry policy.

The federal government is increasing lumber production from Oregon's forests[1] to such an extent that if the state pursues its proposed timber production schedule, Oregon's forests will be depleted and will be unable to sustainably provide the goods and services that they have provided till now. I propose that the state of Oregon PAUSE ALL LUMBER PRODUCTION FOR THE NEXT THREE YEARS to slow the destruction of Oregon's forests which currently cover about 30 million acres of the state's land area.

If the federal government, through its Bureau of Land Management and Forest Service, fulfills its stated lumber production goals for 2026 – 2028, the state of Oregon will lose ___ acres of standing forest on land managed by the federal government and the universally acknowledged benefits associated with standing forests such as carbon storage, water quality will be lost as well.

Functioning ecosystems on state forest lands provide a variety of benefits including

clean water, recreation, wildlife habitat, and other ecosystem services plus carbon sequestration, clean air and water. If intact and healthy, the sate's forests, properly managed, can partly offset the incremetal losses due to increased federal lumber production.

Climate change and wildfire are impairing and will continue to impair sustainable production of timber products.Annual area burned in wildfires is projected to increase by 300–500% across much of the Pacific Northwest (Halofsky 2018). Climate change and wildfire destroy habitat, interrupt wildlife corridors and imperil species, reduce water quality and supply, and release sequestered carbon which fuels climate change. Proposed Forest Management Plan Principle 12: *Managing for Climate change* can be addresed by suspending logging. By doing so ODF can partly offset these adverse consequences.

BLM's projected incremental annual lumber production in Oregon's forests is projected to be 20 million board feet.

Under the current federal administration, public involvement in federal forestry planning and decisions is severely curtailed and might be suppressed entirely. The state of Oregon continues to provide public access to forestry planning and decision-making, sustaining the model of public engagement that is most likely to represent the diverse interests of forest users.

REALLOCATE SAVINGS ASSOCIATED WITH PAUSING LUMBER PRODUCTION

Pausing harvest activities will reduce the expenditures associated with logging . These cost savings can be used to fund the achievement of the goals ODF has set for itself, such as and create a fund Re-allocate the expenses associated with lumber production to other forest management goals.

Retaining trees rather than harvesting them will contribute to the following goals at no cost. For example,leaving trees standing will accelerate the achievement of **silvicultural and habitat management goals** for average tree diameter[2]. Trees spared during the

pause will preserve carbon, improve water quality and be available once the pause is ended. Another example:

“Forests produce the highest quality and most sustainable sources of fresh water on Earth (NRC 2008; Neary et al. 2009; Creed et al. 2011). Oregon’s extensive and diverse forests generally produce very high-quality water—an important social, economic, and environmental benefit.”

The proposed Forest Management Plan includes 12 Guiding Principles. The first Guiding Principle in order and in applicability is **Greatest Permanent Value**. The multiple

objectives under this heading include:

Protection, maintenance, and enhancement of habitat for native wildlife, for properly functioning aquatic habitats; protection of soil, air, and water; outdoor recreational activities; protection against floods and erosion; protection of water supplies; grazing, foraging, and browsing for domestic livestock; forest administrative sites; and mining leases and contracts. Contribute to biological diversity of forest stand types and structures at the landscape level and over time. Conserve and maintain genetic diversity of forest tree species. Apply silvicultural techniques that provide a variety of forest conditions and resources..and others.

There can be little doubt that pausing timber production for three years will contribute to the achievement of these objectives and at no reduction in the savings due to curtailing timber production.

The savings accruing to curtailed timber production can be re-allocated to projects designed “to maintain and restore ecological processes and functional characteristics that promote resilient forest conditions” consistent with the Oregon Climate Change and Carbon Plan (CCCP) goal for state forests.

REVENUE PRODUCING CONSERVATION MEASURES

Conservation use of state trust land—which broadly includes conservation leases and licenses, conservation easements, and other conservation land sales, transfers, and

exchanges—is a market-based form of environmental conservation that provides the opportunity to conserve land and resources while still generating revenue. (Stoellinger)

The trust duty to maximize long-term financial returns for beneficiaries does not inherently favor consumptive uses over conservation. Moreover, the trustee must have the interests of the beneficiaries foremost: "the trustee [must] manage the assets with a long-term perspective, ensuring that the trust can satisfy both the present and future needs of the beneficiary." As wildfires consume timber assets and climate change promises even more destruction, conserving standing timber is the only option available for satisfying future needs while continuing to supply high quality drinking water, store carbon and preserve recreational values for the long term.

You don't often get email from gilkelley1@gmail.com. Learn why this is important

Pease accept these comments from me on the draft Forest Management Plan:

1) It is very difficult to read this document and understand the real thrust of these policies, particularly what they mean for the priority of conserving complex and mature forests. There is no clearly stated goal for the percentage of total non-HCP forests of this type to be conserved through prohibition of logging and other invasive practices or uses, only a promise to balance vaguely stated principles when crafting future specific are plans.

2) There should be a clearly stated numerical goal - *in this Plan* - for conservation of remaining complex and mature forests, including the portions of these that extend beyond narrow, regulated stream corridors . This goal should be stated in terms of the total percentage of all currently existing non-HCP complex and mature forest areas that should be protected and conserved by prohibiting logging and other invasive practices and uses within them.

3) This conservation and protection goal should represent a very substantial portion of the existing complex and mature forest areas areas (75% or more) and define the practices that will be used to ensure this goal is met.

4 All existing (currently remaining) complex and mature forest areas should be mapped in detail and included in the Forest Management Plan as a 2025-26 baseline for informing specific subsequent protection and conservation efforts over the life of the plan.

5) Any planned or potential loss of complex or mature forest areas through the creation of specific area plans should be mapped and stated in terms of both acreage and the reduction of area from the 2025-25 baseline and against rerunning total of baseline versus the Forest Management Plan's goal of conserving a minimum percentage of that baseline area; e.g against 75% of all 2025-26 complex and mature forest area overall.

6) Without the discipline outlined above, public trust in the conservation and protection goals for complex and mature forest areas set by the Plan cannot be sustained and the balancing act between the Draft Plan's vague and technocratic principles employed on an area-by-area basis will be viewed as simply a means to sacrifice these precious forest areas and qualities that should be preserved over the life of the Plan.

Subject: ODF-Forest Management Plan

General Comments:

- As a resident of the coastal community of Rockaway Beach, it is unfortunate that the draft FMP applies only to the lands managed by the OregonDepartment of Forestry and owned by either the Department of State Lands or theDepartment of Forestry. Private lands, ***including the enormous privately ownedindustrial timber properties*** are regulated by the Oregon Forest Practices Act (FPA). The draft FMP must acknowledge this disparity, and provide assurance that theseindustrial properties are regulated in a manner that is, at a minimum, as protective to drinking sources as those properties covered by the FMP.
- One statistic in the draft FMP states: "Less than 1% of Oregon surface water drinking water source areas are located on ODF lands (DEQ 2017)." It is difficult to determine how this statistic was derived. Watersheds are connected hydrologically via headwaters, streams, rivers, wetlands, and groundwater. This being the case, even municipal wells on the coast are impacted by logging practices upgradient. As a consequence, the FMP must include more realistic data with respect to the number of citizens that are impacted. An independent statistic reports **25,000 people (or** 46%) in Tillamook County receive drinking water from the Tillamook State Forest.
- The Forest Management Plan (FMP) must protect all domestic water sources regardless of type (surface water, spring, shallow well) or registration status. It's a public health issue. Water sources must be protected from sediment, diminished quantity and pesticide/herbicide contamination.

Specific changes requested

1. Page 1-2 The OARs direct the FMP to include strategies that accomplish a defined set of guiding principles. The authors omitted the Protection of watersheds, water resources and domestic drinking water as a Greatest Permanent Value.

2. Figure 1-1 does not list drinking water as a Greatest Permanent Value. It may be one of the most important. Drinking water must be included as a Greatest Permanent Value. This is supported by the Forest Practices Act section 527.710:

"...the rules shall provide for the overall maintenance of the following resources: (a)Air quality; (b)Water resources, **including but not limited to sources of domestic drinking water."**

3. From page 8 of the Oregon Forest Resources Institute Trees to Tap report summary

it is stated "The total number of treatments [pesticide applications] on a seedling plantation ranges from one to four, depending upon the severity of competing vegetation." "While glyphosate (the most used chemical) is less mobile in soil, most of the others commonly used (e.g., Imazapyr, MSM, SMM) are moderately to very mobile in soil." (MSM=Metsulfuron methyl and SMM=Sulfmeturon methyl.)
The FMP must include language that requires minimized use of pesticides and/or provide alternatives to pesticides to protect drinking water sources and wildlife.

4. Logging practices that include slash burning issues and pesticide overspray/drift can

compromise air quality, a public health risk. ODF shall provide air monitoring to determine exposure. These practices are destroying our fragile native coastal ecosystems and threatening our communities' health. These practices need to be STOPPED today. **According to the Oregon Health Authority, drift and re-volatilization is known to occur at least two to four miles away from an aerial spray site.**

Thank you,

Janet Teshima

TO: Interim State Forester Kate Skinner
FROM: Coast Range Association (CRA) via email to odf.sfcomments@odf.oregon.gov
RE: Comments on the Draft Western Oregon State Forests Management Plan
DATE: January 30, 2026

Dear Interim State Forester Skinner,

Please accept these comments into the record for rulemaking on the Draft Western Oregon State Forests Management Plan (FMP) submitted by the Coast Range Association. These comments are meant to amplify and provide context to the comments provided by the State Forest Coalition. The CRA is a signatory to the Coalition's comments.

The CRA was deeply involved in the Board of Forestry's (BoF) deliberations adopting the Greatest Permanent Value Rule. At the time, 1997, we saw the Rule's adoption as a defeat for conservation values, having argued for a Rule more amendable to the framework of the federal Northwest Forest Plan. Oregon law and the power of the timber industry resulted in the current Rule.

The CRA provided extensive comments on State Forester Brown's first forest plan using Structure Based Management. We saw the Plan as a lite version of ecological forestry. However, we were open to seeing the plan's implementation. Over time, the ODF and the BoF allowed the goal of timber production to overly influence the Plan's implementation.

In a sense, the GPV cut the baby in half and the first state forest plan, and its implementation cut the baby in half again. Thus, we were little surprised when the hoped for 1998 HCP was never achieved.

Times change, and with them their demands. The climate crisis, we believe, overrides all other considerations of policy. The BoF has adopted a Climate Change and Carbon Plan (Climate Plan). And the Governor's executive order 25-26, calls on ODF to accelerate climate actions by setting aside an additional 10% of state forest lands for carbon sequestration beyond the baseline of 2025. This baseline includes the HCP, Climate Plan and other Board-adopted policies either adopted or implemented prior to 2026.

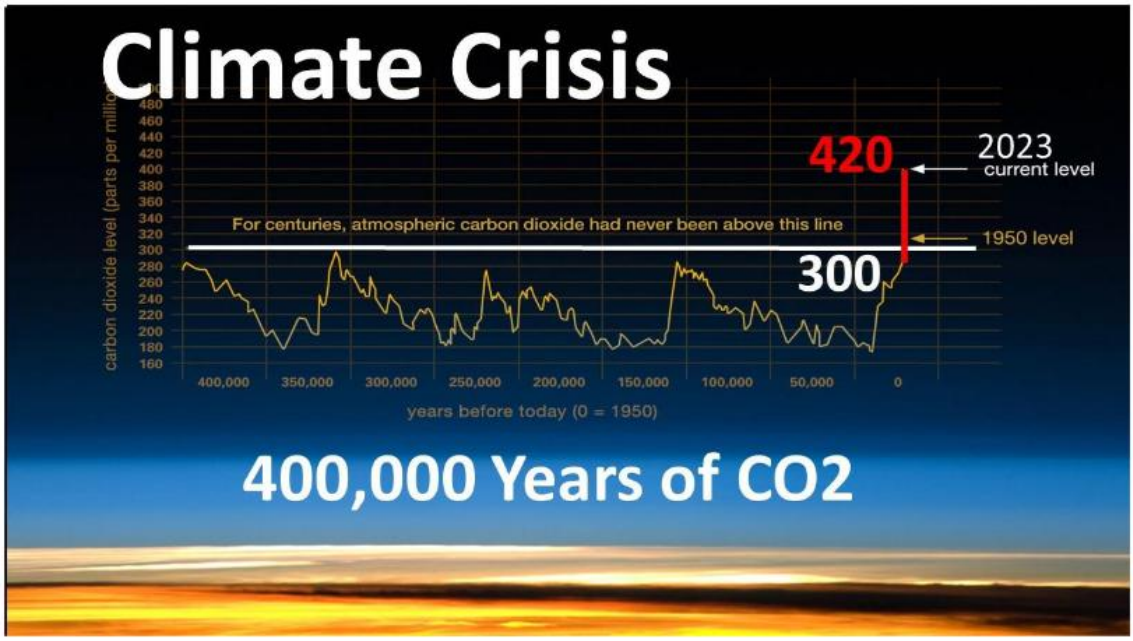
Even so, the state of Oregon's and the ODF's considerations of necessary climate mitigation policies fail to scale to the clear and present danger of **accelerating** climate warming. Almost monthly, a new science-based climate warning occurs revealing the potential catastrophic scale of the crisis.

We mention only one such warning, ***World Scientists' Warning of a Climate Emergency*** 2022 (Ripple et el. Bioscience 72: 1149–1155).

The article states in the first two sentences; “We are now at “code red” on planet Earth. **Humanity is unequivocally facing a climate emergency**” (Emphasis CRA). The document goes on “Since this original warning, there has been a roughly 40% increase in global greenhouse gas emissions. This is despite numerous written warnings from the Inter-governmental Panel on Climate Change [IPCC] and a recent scientists’ warning of a climate emergency with nearly 15,000 signatories from 158 countries. Current policies are taking the planet to around 3 degrees Celsius warming by 2100, a temperature level that Earth has not experienced over the past 3 million years….”

If nothing else, we hope the ODF and the BoF share our belief that the Trump administration’s denial of climate science is childish and dangerous.

The graphic depiction of the climate crisis appears in an endless flow of images provided by scientific, governmental and NGO institutions.



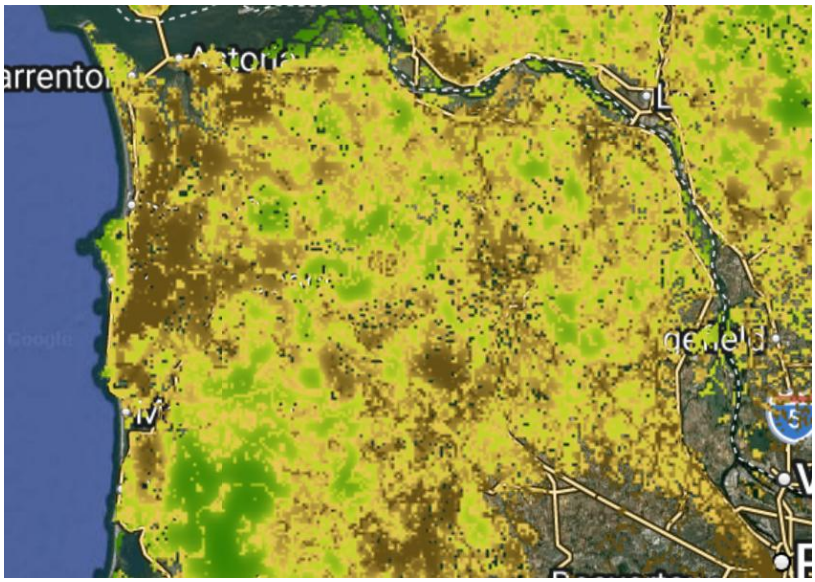
Today, global CO2 readings are in the range of 426 parts per million.

Forest Integrity

Coupled with climate warming, planetary ecological decline, including the loss of forest integrity, places the human prospect under a dark cloud. We call your attention to the **Forest Landscape Integrity Index** which states the project “*integrates data on observed and inferred forest pressures and lost forest connectivity to generate the first globally-consistent, continuous index of forest integrity as determined by degree of anthropogenic modification. This is the first measure of*

ecological integrity for all the world's forests. The study brought together 47 forest experts from across the world to apply recent developments in cloud computing and large new datasets." See https://www.forestintegrity.com/

Here is the project's mapped forest integrity for the landscape between Tillamook Bay and the Columbia River.



Low integrity
Medium integrity
High integrity

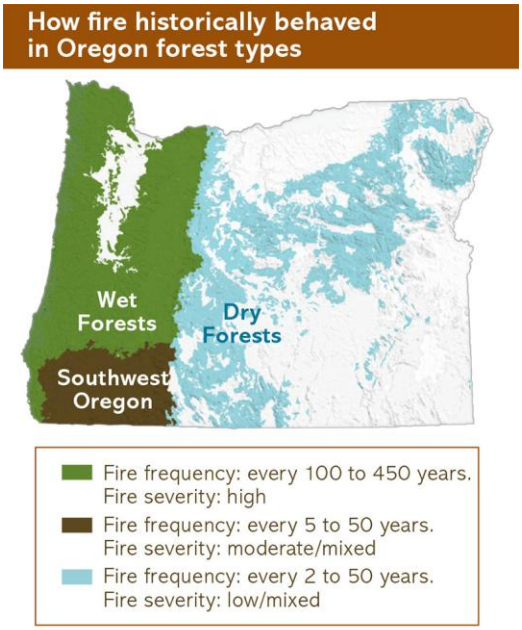
Simply put, after decades of ODF management, forest integrity on state forests is low to medium. The surrounding landscape of industrial forests are, as expected, Low integrity. Of course, the low integrity of industrial forests is due to their management for 'return' to Wall Street financial capital.

It falls on public lands to provide the public values of species habitat, clean water and appropriate human use. Current state forest conditions are unacceptable. The recommendations of the State Forest Coalition should be taken seriously in the final FMP Rule.

Wildfire

The unique fire ecology of wet and coastal rainforests is not adequately discussed in the FMP. Coastal forests are fire resistant.

At the last BoF meeting, the Oregon Forest Resource Institute (OFRI) made a presentation on a survey of public beliefs regarding forests and forest management. The results were illuminating. Wildfire is the public's number one forest concern. Secondly, the public is not well informed about forest management, much less wildfire science.



We look forward to working with the new State Forester, who, we understand, has experience in wildfire management. New leadership will need to quickly become familiar with Oregon's unique wildfire ecology. The map below is from OFRI's website. While the map is useful in pointing out three broad areas of wildfire ecology, it fails to convey an important wildfire issue for wet forests.

The OFRI map's use of the concepts of frequency and intensity conveys confusing information to the public. The word frequency is misused and intensity is wrong.

In fact, wildfires in wet forest happen frequently. OFRI is not

distinguishing ***stand replacing fires over the extent forest*** with yearly small fire occurrences. Most wet forest fires, especially in the coastal region, are not severe, often amounting to no more than a ground fire.

Climate warming and wildfire science must be brought to bear on state forest management to a greater degree than the current plan and Rule reflect. State forest lands lie predominantly in the coastal region of the wet forest zone. Clatsop and Tillamook State Forests are in the wettest of the wet zone.

Wildfire Resilience and Resistance

In the draft FMP, Chapter 3 – ***Goals, Strategies, and Measurable Outcomes***, under Strategies, point 1. States: "*Actively manage the forest through the application of science-based silviculture and ecological forestry within stands and across the landscape to create a variety of forest conditions that are resistant to disturbance events*." Of the eight mentions of the word **resistant** in the entire FMP document, this is the only mention of resistance possibly related to wildfire. And that mention is indirectly through the notion of disturbance.

Now go to the draft FMP's Principles section where it states under Principle 5, Forest Restoration: "*Disturbance events (e.g. ice storms, wind events, floods, fires) can lead to under-productive forest conditions and susceptibility to insects and disease. These stands often require immediate action to restore **resilient** and productive forest conditions.*" (emphasis ours)
And,
"*The FMP will recognize these restoration needs and develop goals and strategies that seek creative funding mechanisms to implement them. The restoration effort will contribute to healthy forest landscapes that will be **resilient in the face of climate change, fire**, or other disturbance events and stressors. Monitoring and adaptive management are important components of the restoration efforts*." (emphasis ours)

The use and misuse of the words resilient and resistant in the FMP ought to be corrected. What Strategies and Goals achieve wildfire resistance and what Strategies and Goals achieve resilience? We believe the public, upon learning the distinction, would strongly favor wildfire resistant management Goals and Strategies. Therefore, we strongly urge the department and BoF to incorporate far more **fire refugia science** into the FMP Rule. Please see https://firerefugia.forestry.oregonstate.edu/outreach.html

State Forests, particularly on the coastal side of the Coast Range region, need to be managed based on wildfire refugia science appropriate to coastal wet forests. Excessive canopy reduction (below 75% closure) or canopy removal through clearcutting, sets the stage for increased wildfire probability. Coastal forests are naturally fire resistant. The FMP Rule should reflect that fact.
We hope these brief comments into the FMP Rule process help align the plan closer to the needs of a warming world and the wishes of the great majority of Oregonians.

We close with the following acknowledgement. In these times of social unrest and fraught public discourse, we greatly appreciate the conduct and professionalism of ODF employees and management. And we look forward to the leadership of the new State Forester.

Sincerely,
Chuck Willer

You don't often get email from beccanielsen@earthlink.net. Learn why this is important

There should be no cutting in areas effecting drinking water.
No use of pesticides after cutting - and this starts with Davis Ridge.
Older forests should be left.
I cannot understand why ODF is following the same procedures as 150 years ago. Stop clearcutting. Use sustainable practices. Reinstate the severance tax. We are a part of this eco system- quit destroying it.

RE: Draft State Forest Management Plan (FMP) comments

Dear Mr. Butteris and Department of Forestry Staff,

Thank you for the opportunity to provide comments regarding the Oregon Department of Forestry (ODF) draft State Forest Management Plan (FMP). The Oregon Forest & Industries Council (OFIC) offers these comments and hopes ODF finds them constructive. OFIC is a statewide trade association representing forestland owners and forest products manufacturers in Oregon. OFIC's core mission is to advocate on behalf of its members to maintain a positive, stable business operating environment for Oregon's forest products community that fosters long-term investments in healthy forests; to ensure a reliable timber supply from Oregon's public and private forestlands; and to promote stewardship and sustainable management of forestlands that protect environmental values and maintain productive uses on all forestlands.

OFIC appreciates the need for a revised FMP given the recent adoption of the draft State Forest Habitat Conservation Plan (SFHCP). When the SFHCP was adopted, over half of the forest was set aside in reserves for the express purpose of creating older forest habitat. There was an acknowledgement at that time- voiced in various public settings- by both Board of Forestry members and Department Staff that that decision was a conservation decision and absent a revision of the FMP it represented an imbalance of the three-legged *Greatest Permanent Value* (GPV) stool. The counties and the forest sector have been waiting for that imbalance to be corrected through a plan that recognizes the need to manage the non-HCA lands with a sharp focus on production and harvest volume outcomes. With this in mind we offer the following critiques of the draft FMP.

1. Overall Direction and Balance of Objectives

> While the draft FMP states that it aims to achieve GPV through a balance of social, economic, and environmental benefits, the proposed framework seems to increasingly emphasize conservation, and social values at the expense of sustainable timber production. The historical intent of GPV, as reflected in OAR 629-035, recognizes sustained timber harvest and local county revenue as primary means of delivering long-term value. Yet throughout the draft, timber production is treated as a subgoal, rather than as the economic foundation that enables the State to manage, restore, and sustain the forests. To ensure a viable, working forest landscape, the FMP should

reaffirm that active harvest and revenue generation are not competing outcomes but central drivers of GPV.

2. Disproportionate Weight on Environmental Categories in GPV (Figure 1 -1)

The "Greatest Permanent Value" categories assign equal prominence to social, economic, and environmental benefits. However, the examples under the economic column are limited and overly generalized compared to the detail given to environmental and social benefits.

- Timber production is treated as a sub-point rather than a central driver of all three categories.
- The list should explicitly reference sustained yields, annual harvest targets

This imbalance signals a policy shift away from economic productivity, weakening the foundation for managing State Forests as working forests intended to generate consistent revenue for counties and the State.

3. Adaptive Management Without Clear Performance Metrics

The adaptive management approach is discussed extensively but lacks measurable indicators. To function as intended, adaptive management must include explicit performance metrics such as:

- Acres harvested annually versus planned targets.
- Trends in net forest growth-to-harvest ratio.
- Economic returns to counties.

Monitoring only environmental indicators (e.g., habitat conditions, fish passage, or water quality) without tracking economic and operational metrics will produce an incomplete assessment of FMP success.

4. Limited Attention to the Societal Value of Workforce Stability

The draft FMPs social benefit section mentions employment but fails to connect stable, predictable timber flows with the survival of Oregon's wood products infrastructure; mills, contractors, truckers, and foresters who depend on consistent supply from State lands. Overly restrictive harvest policies will further erode industry investments in the sector, particularly in communities already distressed by federal harvest reductions. A robust, predictable harvest level is essential not only for counties but for sustaining rural economies and skilled forestry employment.

5. Insufficient Commitment to Active Management in Response to Disturbance

The draft FMPs description of post-disturbance management implies that passive recovery may be acceptable after major events (fire, windthrow, etc.). Professional forestry experience demonstrates that immediate, active response, including salvage harvesting and prompt reforestation, is critical to maintain forest health and value, prevent pest outbreaks, and

accelerate ecological recovery. A stronger emphasis on rapid regeneration after disturbance is needed to align with GPV and maintain forest productivity.

6. Need for Explicit Long-Term Timber Targets

To ensure accountability to both counties and taxpayers, the FMP must have clear goals for harvest volumes and revenue. Without defined targets the FMP cannot demonstrate compliance with the State Forester's mandate under ORS 530.050. Establishing specific quantitative benchmarks is the only way to ensure that commitment to "sustainable harvest" remains operationally meaningful rather than aspirational.

In summary, the draft FMP continues to tilt far too heavily toward ecological and social considerations, risking erosion of the timber base that supports these very benefits. We encourage the department to amend the draft FMP to clearly articulate harvest and yield objectives, emphasize that sustained harvest is not contrary to GPV- it is the mechanism that makes GPV possible, and reaffirm that State Forests remain Oregon's working forests, vital to local economies and public services.

Thank you for the opportunity to comment, we look forward to continuing work with the department to complete this Forest Management Plan.

Sincerely,

Seth Barnes
Director of Forest Policy

END THE LOGGING OF OREGON'S OLD GROWTH FORESTS

Regarding the draft Forest Management Plan, there is plenty of forest that has already been clearcut and replanted, but our few remaining pockets of old growth forests MUST be protected from logging as they are a completely irreplaceable. These ecosystems exist nowhere else on earth and their benefits to people, animals, and land are incalculable.

Thank you,

Zoe Blatter.

[You don't often get email from cabeckstany@gmail.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

this plan is too damn vague. Vagueness just allows abuse and mismanagement. Remember, this plan is supposed to benefit the people, not industry. Please protect our forests so we can all have clean air and water and trees to cool our planet. We also need places where we can play and regenerate spiritually.

More specifically:

1.please follow the law and specify that all actions must be based on the BEST AVAILABLE SCIENCE.

2. require compliance with all relevant laws and regulations from Board of Forestry and the legislature

3. delete principle 3. Don't prioritize logging over alal other values in state forests (which would also violate the laws mentioned in #2 above)

4. protect our water quality! not just for salmon and animals, but for the people! (we can't count on the feds to protect our water, so we ask that the state step up!

5. fight climate change and strengthen climate resilience

please change the draft plan along the lines detailed above.

thanks

annie capestany

To whom it may concern:

I would like to submit a comment regarding the draft forest management plan. My main concerns are that management of our state forests should do better to protect mature and complex forests and also to stop clear cutting. I am extremely worried about the climate change crisis, as well as water quality, and wildlife habitat. I love our forests and would like a plan that will rein in the destruction and loss of what makes Oregon so beautiful.

Thank you,

Sara Moen

To: interim State Forester Kate Skinner, upcoming State Forester Kacey KC, Justin Butteris, and ODF rule makers

Dear ODF staff,
Thank you for your hard work and time spent creating the Draft management plan for Western Oregon State Forests, and thank you for the opportunity to comment on it.

I grew up and live on the central coast surrounded by National (and Private) Forest, but love to visit the north coast and the state Forests as well.
Being a sixth generation Oregonian, I have seen a lifetime of industrial timber practice devastation of our state. My own great great grandparents came out west for the Logging boom, and most of my family members for generations were in the industry. But times have changed, and now we know much more about the multiple values of our Forests than they did then.
And so it is our responsibility to step into the present, get out of the outdated clear cutting mentality, and focus on reversing the extreme damage to these once towering forests that we have done here for generations.

The watershed that supplies water to my small family farm was clear cut by a private timber company 3 years ago, near the headwaters, and the now bare mountains no longer hold the water in like they used to.
I live in the usually wet valley below, and had hardly any water last summer in my spring. It is getting scary- especially thinking of having such low water in the summer during wildfire season.
Due to the high number of private and industrial timber plantations in Oregon, our state forests are one of our last hopes for recovery.
Please, we must protect any mature and natural forest stands that remain on our state's forest land as top priority for the people and habitats that depend on them.

With federal forests and public lands at such an incredibly serious risk right now on a national scale from many directions, it is a upmost importance that we raise the bar for ecological restoration and a balanced management of our state Forests.
Due to the extreme extraction being proposed and imposed nationally throughout the Forests and Ocean, it is up to the State to urgently shift priorities toward protecting all the forests and watersheds that we can- for the present and future generations.

These critical forest/watershed management values should take president over any more industrial clear- cutting mindset or priorities. The states have a responsibility now, more than ever, to restore and protect our vital watersheds and habitat for clean abundant water, fish, wildlife, people, eco-tourism economy, and have a beautiful place we get to call home.

We all know that wildfire burns hotter through plantation Forests, the water table drops by about 50% in clear cut and newly growing plantations, and the carbon storage is decimated. There are many studies and reports on these facts that I hope you all read and take to heart. This is a very serious matter, and I have faith that you will do everything you can to protect us all.
Please reach out for links to any of these reports.

Managing primarily for timber sales can no longer be the top priority as we have seen for at least the past decade. Oregonians and visitors value the many other values and assets that an intact Forest brings, and legislation must be made to account for the needed revenue- if that is the real issue.
Responsible ecological thinning can be done, without destroying the moisture creating & retaining canopy, soils, water quantity & quality, habitat, and outdoor recreation and tourism opportunities.

I implore you to include the current political and environmental landscape as you revisit the draft plan, and restore balance and accountability to our state Forests.

I urge you to, at the minimum, make the following amendments to the draft plan.

•The FMP must be based on the best science available- and NOT solely based on timber industry backed and pushed reports or industry biased information.
Add a requirement for all actions to be based on the real best available science, as required under existing law.
•Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
•Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP- which would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
•Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
•Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 years. •Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and consider establishing a carbon market program.
•Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you for taking into consideration the current state of national affairs on our environment, ecology, and forests- and for making these changes to the draft plan to protect our beautiful State Forests for our children and future generations.

In gratitude,
Willow Kasner

Dear Forestry Department,

As you are considering comments on the Western State Forest Management Plan, disregard calls by special interest groups to lock up more of our state forests. I've lived in Oregon for 66 years and have seen forest transformation. The only areas of devastation are from fire and even that will regenerate.

Enough already. They clearly don't understand the definition of forest management. As a resident of Tillamook county for 42 years, I cant think of anywhere thats been logged and wasn't replanted. Trees are a sustainable crop!

Despite the fact that the Board of Forestry advanced a Habitat Conservation Plan that delivers an abundance of wildlife habitat and protections for at risk species, they continue to assert it's not enough. Because it will never be enough for them.

Now is the time to deliver on outcomes for the rest of Oregonians who depend on timber harvests for the health of our rural communities. We can have responsible timber harvests while protecting the environment. Replanting after harvest is Oregon law. Forests aren't in danger, rural living is.

Please develop a management plan that demonstrates to us that rural communities and the jobs that support them are important, too.
Thank you.

Sincerely,

Brenda Charter

To: Oregon Board of Forestry, State Forester, and ODF Staff January 31, 2026
Subject: Western Oregon State Forests Management Plan – final draft -- Comments

Thank you for the opportunity to provide comments with suggestions for improving the current draft of ODF's Forest Management Plan.

The plan as it stands now provides a reasonable level of background and general thoughts relative to managing Oregon's Western State Forests but it is short on specific policies that address: 1) the importance and protection of water resources and the health of those consuming or otherwise using water derived from State Forest lands; 2) the present minimal area of old growth forests and need to emphasize the importance of managing in ways that increase the amount of old growth forest and recognizing the relation of old growth forests to maximizing carbon sequestration; and 3) changing the thinking regarding the economic value of State Forest assets and developing data to provide State leadership and Oregon citizens a more realistic accounting of the value of forest assets.

I request that the current draft of the FMP be amended to add policies specifically directing ODF staff and leadership to manage State Forests with emphases on the protection and enhancement of water resources, increasing the area of old growth forest, and recalculating the asset values of all forest resources. All policies and actions taken by ODF in forest management should be based on best science not falling back on historical practices while ignoring new present day challenges society faces. Challenges that include global climate change and chaos, catastrophic species loss, wanton habitat destruction, and a loss in opportunity for human connection with the natural world, to name a few.

Water: This forest resource should be placed at the top of the pyramid in terms of value to Oregon's citizens. Practices that decrease stream flow and connectivity or degrade water quality should cease. Appropriate data collection and monitoring should be conducted before and after any planned vegetation or land alteration is allowed in order to learn the effects on water resources and improve management practices accordingly. No clear cutting or use of pesticides should be allowed in watersheds supplying drinking water.

Old Growth Forest: Large old trees and areas of complex layered forest stands on Western State Forest land are rare. ODF has ignored its own policies on achieving a minimum of 30 percent coverage. No more timber harvesting should be allowed in areas of old growth or complex layered forests until such time the minimum 30 percent coverage is achieved.

Establish Asset Values: ODF has, for historical reasons, focused on the value of timber and cutting trees down to pay the cost of managing the land. Equal energy and resources of ODF staff should be directed at assessing the values of Water, Habitat, Carbon Sequestration, Recreation, and other non-timber resources on State land. A little bit has been done thus far to assign value but nowhere close to the time and effort spent on placing dollar value on selling and cutting down trees.

Most of the non-timber forest resources are diminished when trees are cut down and sold for revenue which under current practices is mostly by clear-cutting. This loss of value must be taken into account when calculating revenue provided to the State. As it stands now only one side of the ledger is being kept. The loss is not being accounted for. Under the current management scheme Oregon State Forests are losing asset value every year.

I request the FMP include language stating the BOF shall direct ODF staff to carryout detailed inventories of non-timber forest resources and make assessments of the present value of each category. ODF shall calculate losses to non-timber resources that occur with any timber-cutting and subtract those losses from gross revenue to determine net revenue; this accounting shall be reported annually to the State and its citizens. The total asset value of all non-timber resources and change in value shall be provided annually to the State and Oregon Citizens.

Guiding Principle: BOF and ODF should recognize and view the over 600,000 acres of forest under their management as a complex ecosystem with tremendous potential to be of lasting value to Oregon residents and visitors. The State Forest should not be thought of as a source of revenue to fund a department, local governments, schools, or special districts. Instead, State Forests should be managed, in the short-term, to repair damage done from past mis-management and neglect and in the long-term, to be preserved as large natural areas for wildlife habitat and visitor recreation. Sufficient forest land in Oregon is privately owned and managed as tree farms that provide adequate timber and other wood products to meet the needs of Oregonians and export markets. The severance tax for timber cut on private land should be reinstituted to provide tax dollars to meet the economic demands of local governments, schools, and special districts now derived from State timber sales.

Oregon Resident: I live on 28 acres of forested land adjacent to ODF land in Clatsop County. I enjoy the forest for the solitude and wonder that I feel when I enter it. I enjoy observing the wildlife (evermore rare) that inhabits our forest. I want others, now and in the future, to be able to appreciate and benefit from spending time in our natural landscapes.

Sincerely,
Christopher Farrar

Subject: Feedback on Draft of Forest Management Plan
Date: Monday, January 19, 2026 5:35:23 PM

You don't often get email from kara.bates20@proton.me. Learn why this is important

Hello ODF Staff,

I love Oregon's forests—especially the Clatsop State Forest, where I used to hike among dense, multi-aged stands. In recent years the trails have become interspersed with clear-cuts, biodiversity has plummeted, and summer heat feels amplified by exposed soil. Friends and fellow outdoor enthusiasts have stopped visiting as frequently because there's simply less nature left to enjoy.

I was disappointed to read the draft Forest Management Plan and see that it fails to uphold existing laws, rules, and policies that protect our old-growth and forest diversity. While compliance is the bare minimum, we should aim higher.

What I'd like to see changed in the draft

- **Science-first decision-making** – All actions should be grounded in the best available science. Large-scale clear-cutting of mature, complex stands runs contrary to evidence that diverse, multi-age forests are far more resilient to fire, pests, extreme heat, and disease.
- **Enforceable accountability** – Amend the plan to require strict compliance with existing laws, policies, and performance metrics set by the Board of Forestry and the legislature. Without enforceable accountability, logging will continue to outrank recreation, water quality, climate mitigation, and species protection.
- **Stop clear-cutting mature forests** – Halt clear-cuts on North-Coast state lands until at least **30 %** of the forest retains mature, layered conditions. Mature trees are essential seed sources, carbon sinks, and habitat for the 17 imperiled species the Habitat Conservation Plan (HCP) seeks to protect.
- **Balance over profit** – The current principle that timber revenue funds *all* forest-management activities places logging ahead of recreation, clean water, climate resilience, and species recovery—an approach that conflicts with state law and creates a conflict of interest.
- **Climate & species resilience** – Incorporate the Climate Change and Carbon Plan, lengthen rotation periods, and add concrete recovery actions for threatened species.
- **Practical alternative** – Adopt selective harvesting, lengthen rotation periods, and use biodiversity-focused management that lets mature trees nurture younger cohorts while meeting limited timber needs.

Oregon's state forests belong to all of us—people, wildlife, and future generations. They need management that protects ecosystems, climate, and recreation, not a narrow focus on short-term timber profits. I urge the Board of Forestry to revise the draft accordingly and end

clear-cutting of mature legacy forests.

Best,
Kara

Salem, OR 97301

Re: Public Comment on the Western Oregon State Forests Management Plan (FMP)

To the Oregon Department of Forestry and the Oregon Board of Forestry:

The Marion County Board of Commissioners appreciates the opportunity to provide public comment on the proposed Western Oregon State Forests Management Plan (FMP). Marion County submits this comment as a county with a deep connection to Oregon's working forest legacy and a strong interest in ensuring state forestlands are managed in accordance with Oregon law, fiscal responsibility, and long-term sustainability. **Marion County strongly supports the adoption of the FMP alongside the Council of Forest Trust Lands Counties (CFTLC) proposed performance measures, Alternative 2A**, as this option best fulfills the State's Greatest Permanent Value obligations while protecting habitat commitments, supporting rural economies, and maintaining the predictable timber harvest and revenue that counties rely on to provide critical public services.

Oregon's Forest Legacy and Rural Communities

Oregon is defined by its forests and the communities that have stewarded them for generations. Logging towns and mill communities are not relics of the past, they remain an essential part of Oregon's rural economy and cultural identity. Sustainable timber harvest has long supported family-wage jobs, local businesses, public schools, and county services. When harvest levels decline sharply or become unpredictable, rural communities feel the impacts first and most acutely.

Low and inconsistent harvest levels do not simply reduce timber output; they undermine local economies, increase wildfire risk due to unmanaged fuels, and destabilize the revenue structure that supports the Oregon Department of Forestry (ODF) and counties alike. Long-term, sustainable harvest, planned, predictable, and actively managed, is the most effective way to support rural economies, forest health, and public safety.

Greatest Permanent Value Requires Active Management

The FMP is ODF's statement of how it will manage state forestlands for Greatest Permanent Value (GPV) as defined in OAR 629-035-0020. GPV is clear and unambiguous: it means healthy, productive, and sustainable forest ecosystems that provide a full range of social, economic, and environmental benefits over time and across the landscape.

Critically, GPV explicitly includes the "sustainable and predictable production of forest products that generate revenues for the benefit of the state, counties, and local taxing districts." The rule further directs that the State Forester shall actively manage these lands in a sound environmental manner to provide sustainable timber harvest and associated revenues. This directive is reinforced in statute under ORS 530.050, which authorizes the State Forester to use active management tools to secure GPV.

Oregon law also relies on timber revenue as the primary funding mechanism for state forest management. While alternative funding models have been discussed over time, none have been codified. As a result, harvest levels remain directly tied to ODF's operational capacity and counties' ability to provide mandated public services.

Counties as Statutory Partners

Counties are not incidental stakeholders in state forest management, they are statutory partners. Revenue generated from state forestlands directly supports county responsibilities including public safety, public health, road maintenance, and other legally required services. There is a direct and undeniable link between forest management decisions and counties' ability to meet these obligations.

Modeling conducted by ODF using the best available data, along with independent socioeconomic analysis by ECONorthwest, demonstrates that management under the proposed FMP can achieve GPV while generating sufficient revenue for both ODF operations and county distributions, if implemented with appropriate performance measures.

Support for Alternative 2A (CFTLC Performance Measures)

For the FMP to succeed in practice, not just on paper, the Board of Forestry must adopt the Council of Forest Trust Lands Counties' proposed performance measures, known as Alternative 2A.

Alternative 2A establishes:

- A planned harvest floor and ceiling that balances current staffing realities with long-term sustainability;
- A 10-year harvest target of 2.05–2.43 billion board feet from Board of Forestry lands;
- Maintenance of a 6–12 month operating fund balance for ODF;
- A stable or increasing merchantable forest inventory outside Habitat Conservation Areas;
- Continued carbon sequestration gains through active, climate-smart forestry; and
- A collaborative commitment to ensuring ODF staffing capacity sufficient to achieve GPV.

With these performance measures in place, counties will receive predictable revenue, habitat protections will be honored, salmon streams restored, recreational opportunities maintained, wildfire risk reduced, and ODF will be positioned to manage state forests consistent with Oregon law.

Conclusion

Marion County supports the adoption of the Western Oregon State Forests Management Plan in conjunction with Alternative 2A. This approach best reflects Oregon's legal framework, respects the state's working forest legacy, supports rural economies, protects ecological values, and ensures the long-term viability of state forest management.

We appreciate the opportunity to comment and thank the Department and Board for their continued engagement with counties throughout this process.

Sincerely,

Colm Willis

Comments on Western Oregon draft Forest Management Plan

January 2026

The updated Forest Management Plan (FMP) MUST be an enforceable, specific and focused document that makes activities on our public (state) forests work for everyone, not just the timber industry and financially dependent counties.

1. Oregon Department of Forestry (ODF) must protect ALL domestic drinking water sources regardless of registration status, source ie spring, river, shallow well, deep well etc.

2. The FMP must to set measurable, codifiable, timebound and enforceable key performance measures to ensure that the landscape at all times has a minimum of 30% complex (LYR and OFS) stand structure. No harvesting of older stands until this KPM is met and maintained.

3. ODF must stop the aggressive removal of alder. It acts a fire break. Plantations are tinderboxes and alder can help mitigate wildfire risk.

4. Although outside the scope of the FMP, ODF must work with the legislature to re-instate the severance tax and create a carbon credit plan. Those two, in tandem, will fund the counties and allow ODF to keep older forests across the landscape.

Thank you,

Good Day,

I would like to thank you for the opportunity to describe my feelings to protect and restore balance to our state forests.

The FMP must be based on the best science available, as required under existing law.

Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry.

Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clear cut harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels for salmon and other aquatic species within 10 years.

Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce on large-scale clear cutting , and establish a carbon market program.

Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of these species 17 imperiled species clinging to survival in our state forests.

As a resident of Oregon, I have used our coastal forests for hiking, camping, motorized recreation, pole-wood collection, and as a resource to study soil moisture in clearcuts, and therefore have a continuing interest in their long term management. I also have a concern and interest in how their continued health affects the summer rainfall of the Willamette Valley and the Cascade Range.

No forest management plan is complete without a consideration of Forest Mediated Moisture Transport: the area of research that examines how coastal forests are responsible for approximately 40% of inland rainfall, often hundreds of miles inland. One of the studies, listed below, states “Deforestation can be expected to erode the low pressure zones on land that are associated with forest functioning and are responsible for the coast-to-interior moisture transport” (A.M. Makarieva, 2012). In other words, studies show that extensive harvesting of coastal forests (including management practices that target older, ecologically intact forests) negatively affect inland summer rainfall. An examination of satellite databases of Oregon Coastal Range tree cover loss in recent decades (or even a few minutes with Google Earth time sequenced images) show a notable, one might say alarming, decrease in vegetation cover on public and private lands. Also, during recent decades, we have experienced decreasing summer rainfall in the Willamette Valley and Cascades, yet there is no consideration in the Forest Management Plan of any connection between management of our coastal forests and inland summer rainfall trends.

The connection between coastal forest health, forest extent, and inland rainfall is not an academic one: the agricultural output of the Willamette Valley and the changing fire behavior in the Cascades are critically linked to the management of our coastal forests.

I have included, below, a number of papers on the topic of Forest Mediated Moisture Transport, also called the “biotic pump,” as a sample of research in this area and for your consideration.

Thank you for your consideration of my input,

Mark Mulder

I am submitting my testimony in strong opposition to the current draft forest management plan.
I have lived in Oregon my entire life. I have enjoyed every aspect of this beautiful state. When I was a young there were no closed roads. I could visit any place wanted. The forests were logged and rural Oregon thrived on the money generated by this logging. There was an abundance of Deer, Elk, Game birds and fish. Now I am old. You are closing roads so I can no longer go to places I could walk to when I was young. I can no longer walk like I used to and now I can't even drive to them because you are closing roads.
The forests were lush and green. Now they are over grown with brush and briers. There were very few forest fires and if there was one it was small and put out right away. Now every year there are massive forest fires. Some are allowed to burn (the bedrock fire comes to mind). Then after the fires have destroyed the forest no one is allowed to come in an harvest the marketable timber. The timber sits on the forest floor to rot and fuel future fires. Note it is hard to fight a forest fire with no roads. These fires kill wildlife and endangered species. The air we breathe in the summer is so polluted by smoke it makes marginal health people stay indoors.

The economy of our rural cities has taken a terrible down turn because the forests are locked up.

I could go on and on with detrimental forest practices Oregon is using. Why don't you start running ODF like a business out to make a profit. I am very disappointed in the way I've seen our forest decline since I was a young man. Please allow more logging, open the roads and let people enjoy Oregon.

Sincerely

Tim Baker

Dear Forest Decision-makers,

This forest plan will determine what happens in our state forests for the next decade and beyond. As written the proposed plan paves the way for more clearcutting in forests, including old growth, resulting in further reducing carbon storage and climate resilience.

We need a plan that ensures state forests are managed to provide the greatest *permanent* value by increasing carbon storage and climate resilience, reducing greenhouse gas emissions from forest product operations and optimizing forest productivity and uses.

Please produce such a plan for us, our children and their children. Thank you.

Dear Forestry Department,

Thank you for the opportunity to submit comments on the Western State Forest Management Plan.

The Department of Forestry is tasked with managing state forests for Greatest Permanent Value, which includes a balance between environmental, social and economic outcomes.

The state's Habitat Conservation Plan definitively checks the environmental and social boxes. Those goals have been thoroughly met. There is absolutely no need to consider additional restrictions on harvest.

Instead, the management plan should focus on active forest management and meeting the third goal of GPV: economics.

That will not compromise other goals. Responsible harvests strengthen forest health, reduce disease and wildfire risk and support restoration activities — all while sustaining Oregon's rural economies and the Department's own budget.

Thank you for the opportunity to comment.

I could list the multiple concerns and solutions presented by the many environmental groups and thousands of citizens for the past 40 years regarding the destruction of our forests and environment that continue to be ignored and/or watered down to meet the demands of the timber industry, but you know these by heart.
Until there is a new direction and an end to the destruction, greed and ownership of this state by the timber industry nothing will change.
Please consider a plan that protects our watersheds, wildlife, ecosystems and our overall health and wellbeing.
Sincerely,

Michael Baker

Add a requirement for all actions to be based on the best science available, as required under existing law. Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP. Delete or amend the draft FMP which requires revenue from timber harvest to fund all of state forest management activities, which prioritizes logging over all other values in state forests.Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies. Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program. Logging can be done selectively or in small patches to protect soil carbon which is 40% or more of all forest carbon. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it alone won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Steve Benson

going threat of landslide and risk of property and residents.

The Geotech Mike Buren that came down said he thought we might be ok in the event of a slide or blow out but Bonnie Wood property would take the most of it.

To close I would like to finish up by saying I would like the Department of Forestry halt the logging of personal watersheds with steep slopes as part of the new Forest Management Plan.

Why not put this wonderfully diverse unit into your inventory as a back up "Habitat Conservation Area".

Oh did I mention our owl population? for another time.

Thank you Keith and Tracy Chartier

Problem with Preposed Logging above 23120 Foss Rd Nehalem, Oregon

Our domestic water source is surface water, Type D with water rights cert# 51050 for tax lots #333277 #371886 from said unnamed creek east of Peterson Creek.

When I first moved here in 1977 it was a chore just keeping water running to the house winter and summer. Winter was high water and sediment and an ever changing Creek and summer low flows constantly trying to pickup enough water to supply the household.

The watershed was still recovering from the Tillamook Burn. Snags and the regrowth of alder.

As years passed and canopy grew the water quality grew along with it. Year-around creek and quality water after freshets during the winter.

In 1996 we supplied 3 households with water fo 2½ weeks without power and not being able to leave Foss Rd for 8 days.

Again in 2007 we Supplied the same 3 households for a week.

Several times I have seen fish in the reservoir. Have no idea what kind of fish but they're fish.

Along with this letter I will be Sending a video of the Creek the morning after the freshet on Dec. 8th 2025. Also a picture of one of the fish found in reservoir.

Besides water quality after logging the Small Steep draw, would be the on

I live in Rockaway Beach oregon, our watershed has been decimated by private timber owned by Nuveen Corp. Our watershed, Jetty Creek has been logged and continued logging and pesticide spraying is happening now.

Please protect watersheds. For drinking water but also for THE STATE OF OREGON. We do not destroy, log and spray chemicals into watersheds. When did this become OK? Governor McCall would be ashamed.

Please:

- no more logging and pesticide use in community drinking water sources regardless of who owns the land
- end to pesticide applications near where people live, work, and recreate.
- Safe drinking water and clean air are part of the public trust that we all are entitled to have.

Detailed Inuts Regarding Forest Management Plan's coverage of drinking water is on page 3-46.

1. Figure 1-1 does not list drinking water as a Greatest Permanent Value. It may be one of the most important. Drinking water must be included as a Greatest Permanent Value. This is supported by the Forest Practices Act section 527.710: "...the rules shall provide for the overall maintenance of the following resources: (a)Air quality; (b)Water resources, including but not limited to sources of domestic drinking water."
2. The Forest Management Plan (FMP) must protect all domestic water sources regardless of type (surface water, spring, shallow well) or registration status. It's a public health issue. Water sources must be protected from sediment, diminished quantity and pesticide/herbicide contamination.
3. The FMP must require ODF to send notifications of any planned activity to all those downstream and downwind in the watershed and request that property owners notify them of their domestic drinking water source location. Once notified, ODF must work with the landowner using best available science to protect the property from harm.
4. Forestry activities must never negatively impact drinking water sources. Currently, consumers pay for the treatment of drinking water affected by logging. The FMP needs to include a process in which consumers can be compensated
5. Forestry activities must not impair personal and public health. Those costs are currently passed on to consumers. The FMP needs to include a process in which consumers can be compensated.
6. United States Environmental Protection Agency and Oregon Department of

Environmental Quality (DEQ) studies list 46% of Clatsop County as having "impaired" water quality. Sediment and temperature standards are often in violation. The FMP must be more specific as to how those parameters will be complied with.
7. The draft FMP references the Oregon DEQ and Oregon Health Authority (OHA) as the responsible state agencies to assure drinking water quality is protected. There must be much more specificity as to how that interagency process will be implemented to prevent contamination, and to remediate contamination when it occurs.
8. Unfortunately, the draft FMP applies only to the lands managed by the Oregon Department of Forestry and owned by either the Department of State Lands or the Department of Forestry. Private lands, including the enormous privately owned industrial timber properties are regulated by the Oregon Forest Practices Act (FPA). The draft FMP must acknowledge this disparity, and provide assurance that these industrial properties are regulated in a manner that is, at a minimum, as protective to drinking sources as those properties covered by the FMP.
9. One statistic in the draft FMP states: “Less than 1% of Oregon surface water drinking water source areas are located on ODF lands (DEQ 2017).” It is difficult to determine how this statistic was derived. Watersheds are connected hydrologically via headwaters, streams, rivers, wetlands, and groundwater. This being the case,

even municipal wells on the coast are impacted by logging practices upgradient. As a consequence, the FMP must include more realistic data with respect to the number of citizens that are impacted. An independent statistic reports 25,000 people (or 46%) in Tillamook County receive drinking water from the Tillamook State Forest.
10.From page 8 of the Oregon Forest Resources Institute Trees to Tap report summary it is stated "The total number of treatments [pesticide applications] on a seedling plantation ranges from one to four, depending upon the severity of competing vegetation." "While glyphosate (the most used chemical) is less mobile in soil, most of the others commonly used (e.g., Imazapyr, MSM, SMM) are moderately to very mobile in soil.” (MSM = Metsulfuron methyl and SMM = Sulfmeturon methyl.) The FMP must include language that requires minimized use of pesticides and/or provide alternatives to pesticides to protect drinking water sources and wildlife.
11.Logging practices that include slash burning issues and pesticide overspray/drift can compromise air quality, a public health risk. ODF shall provide air monitoring to determine exposure. These practices are destroying our fragile native coastal ecosystems and threatening our communities' health. These practices need to be STOPPED today.

Dear Board of Forestry members, Oregon State Forester and Governor Kotek,

I am submitting my personal comments on the draft West Side Management Plan currently under review until the end of January.

How could previous plans and this draft plan have gotten so far without setting Drinking Water as a high priority for protection? The Forest Practices Act names Drinking Water as a resource to be protected. I hold myself partly responsible as this is the first time I have provided comment on any plan.

As a Tillamook County citizen since 1981 I have been involved in various occupations beginning as manager of the Tillamook County Soil & Water Conservation District, then moving on to become Director of the Tilllamook Bay National Estuary Project (now known as Tillamook Estuaries Partnership), and finally retired from the workforce after 11 years managing Neah Kah Ni Water District.

During my tenure as water district manager I learned of two key studies **(Perry-Jones 2016 and Sugura 2020)** that clearly showed how plantation forestry significantly diminishes surface water availability for decades while these plantations grow. As recently as 2022 I had the opportunity to perform a ground truthing of these studies. I compared the Miami River flow against the Three Rivers flow on the same day in August when coastal rivers run at their lowest. Three Rivers flow was over 4 times that of the Miami River. Watershed size, geology and geographic location are all similar with the key difference being the timber management style in each watershed. The Miami River is primarily Tillamook State Forest while Three Rivers is primarily Siuslaw National Forest.

Given the above, **it is clear to me that the draft ODF plan does not address current science with regard to drinking water volume.** The drinking water of most of the communities along the Oregon coast are impacted by forest management style. It must not be ignored that ground water and surface water are closely related. If surface water levels decrease, the same will follow for ground water levels eventually. More and more private rural residential wells near me have been drying up in the late summer months than ever before. **Forest Management must lean toward much longer growth cycles for this as well as myriad other reasons. The same should apply to private timberlands.**

Thank you for listening. Respectfully, Richard Felley, Tillamook County resident since 1981.

Dear Commissioners and To Whom it May Concern:

Happy New Year.

I would like the new forest management plan to encompass the entire forest eco-system that includes fish, the environment, climate change, provisions to ensure the recovery of threatened and endangered species, and spaces for the public enjoyment of our forests.

We have to bring a balance back to state forests by restoring mature forests because we realize the critical part mature trees play in reducing carbon emissions. We can do this if we use evidence based decisions based on scientific inquiry.

Finally, there has to be some built in accountability and periodic public review for changes to the plan.

To whom it may concern,

I believe our state forests are at a crossroads. The draft Forest Management Plan (FMP) fails to adequately protect mature legacy forests, clean water, wildlife, and climate resilience and it really needs to be strengthened.

Please amend the FMP so it is grounded in the best available science, fully accountable to existing laws and policies, and balanced so logging no longer outweighs all other forest values. This includes halting clearcutting of complex, mature forest stands until at least 30% of North Coast state forests meet required conditions, safeguarding waterways essential for salmon and communities, and restoring impaired watersheds within the next decade.

The plan must also meaningfully address climate change by implementing the Climate Change and Carbon Plan, shifting to longer harvest rotations, reducing large-scale clearcutting, and establishing a carbon market program. Finally, it must go beyond preventing extinction and actively contribute to the recovery of the 17 threatened and endangered species struggling to survive in our state forests.

Healthy forests mean clean water, resilient wildlife, and a stable climate for future generations. I hope you'll do all in your power to strengthen the Forest Management Plan and end clearcutting in our mature state forests.

Thank you for your time and attention to this important issue.

Sincerely,

Chris Dodge, lifelong resident of Oregon and concerned citizen

Dear State Forests Division Justin Butteris,

Our Oregon forests are our treasure. We know it. Everyone who ventures to Oregon from somewhere else knows it too. They marvel at the miracle of Oregon's wilderness. I have spoken with many, many people on our trails about this over the years.

Of course, we need and use forest resources. But we must be intelligent about it. Which is why I urge you to ensure that Oregon's remaining mature forests are protected forever in order to ensure that we will always have forests, to protect our climate and our threatened ecology, and to provide a buffer against the severe threats of climate-generated events, such as wildfires and the resulting aftermath.

Oregonians deserve a healthy and beautiful state. Please ensure that we keep it this way. Thank you. -Becky Chinn, Tigard, Oregon

Dear Forestry Department,

Thank you for the opportunity to provide input on the Western State Forest Management Plan.

I strongly encourage the Department to adopt a plan that prioritizes the needs of working forests and the rural communities that depend on them.

For the sake of balanced stewardship, financial stability, and the long-term health of Oregon's forests and rural communities, it is vital the Department move forward with a plan that emphasizes strong economic performance.

A substantial portion of state forestland has already been dedicated to wildlife habitat, and the Department's own projections show these areas will more than meet environmental objectives. Further restrictions are unwarranted.
With these conservation commitments already secured, the focus should now shift toward ensuring sustainable economic outcomes. Countless families and timber-reliant communities depend on responsible forest operations for steady jobs and economic stability.

Additionally, revenues from state forest harvests are vital for counties, schools and local taxing districts. Curtailing timber production threatens their ability to deliver essential public services and undermines the Department's requirement to remain financially self-supporting. ODF must continue generating the revenue needed to operate without shifting costs to taxpayers.

It is important that the Department resist ongoing pressure from anti-forestry groups seeking additional limitations that are neither necessary nor balanced.

Thank you for your consideration.

Hello, I would like to comment on the new Forest Management Plan proposal, to state my support for a robust plan put in place to protect Oregon's forests (a crucial endeavor). While the current draft does go a long way toward this (and I am thankful for that!), it still seems like there is room to be stronger on protections for old growth trees and endangered species. It bothers me that not only is monetarily profiting off of the forests heavily featured in the plan draft, but even principle 1's first stated priority is a commitment to revenue rather than conservation and the health of the forests themselves, including the species that live among them. That should be the actual priority of the plan.

I read that ODF set a target years ago to retain 30-50% of older forests, but I see in the plan that just 14% are left, and are eligible to be logged currently. That does not seem right at all. I would like to see a stronger commitment toward halting practices of clearcutting, such as mass timber harvest of complex layered forest stands, until a minimum of 30% of North Coast state forests are in complex condition. The plan should mention longer rotations between harvest, and generally reduce reliance on large-scale clearcutting.

In terms of endangered species protection, the FMP should include specific strategies toward this end, in addition to the HCP, to contribute to the recovery of the 17 species in perilous position.

Thank you for reading

Following are my comments as an Oregonian regarding the Oregon Forestry Departments draft forestry plan.

I, like many conservationists want to see the Oregon Department of Forestry set conservation targets in their new forestry plan. Specifically regarding the conservation of a certain percentage of complex forests in areas that would not be protected by the HCP.

This action would not only assist in maintaining diversified forests for many species, especially those that are endangered. But would assist in lessening the impact of global warming on the Pacific NW and the planet as a whole.

As I drive around this beautiful state, I see on a daily basis the amount of forest being decimated by current logging practices. If something is not done to slow the clearcutting of our mature and old growth forests, the future of our water, air, climate and beautiful animal and plant species will be in peril.

To the Oregon Department of Forestry:

I have reviewed the draft Forest Management Plan, and was happy to see such a strong emphasis on climate change mitigation and adaptation. Our forests are one of the most important tools we have for reversing decades of CO2 enrichment. Proper forest management is one of our best hopes for repairing our human-altered climate, with its associated climatic extremes and unpredictability and increased wildfire activity. This is why I urge the Department of Forestry to amend the draft plan in order to put much greater emphasis on climate **mitigation** than is the case with the current draft.

There are numerous ways to bring about this greater emphasis. It is essential that the plan be based on the best available science. Oregon's forests will sequester far more carbon if old-growth forests are protected from harvest, and if sites designated for harvest are cut when they are fully mature (70-80 years) rather than immature (30-40 years). Wood products should not be considered to be carbon sinks – compare the life of a bookshelf with that of an old-growth tree! Compliance with all relevant statewide policies and performance measures should be mandated. Very importantly, forest management activities should NOT be funded by timber revenues, as this leads to a prioritization of harvesting over the many other values that forests provide: carbon sequestration, salmon runs, clean and abundant drinking water, recreational opportunities, etc.

I offer these suggestions for amendment because I am an Oregonian committed to assuring that generations of Oregonians to come will enjoy a healthy, safe, and beautiful environment. We owe them this legacy.

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan.

Oregon's mandate for managing state forests is clear: Greatest Permanent Value requires a balanced approach that accounts equally for environmental, social, and economic benefits. In recent years, that balance has tilted heavily toward environmental and social objectives.

With the Habitat Conservation Plan, those objectives have been fully addressed. The HCP provides expansive habitat protections and long-term conservation certainty. Because these goals are already met, additional harvest restrictions are unnecessary and would only deepen the existing imbalance.

The management plan should now turn its attention to the third pillar of GPV - economic outcomes - by restoring active forest management. Responsible, well-planned harvests improve forest health, reduce susceptibility to disease and wildfire and support critical restoration work. At the same time, they provide dependable jobs, strengthen rural economies and ensure the Department can fund its own operations without shifting burdens to taxpayers.

Rebalancing Oregon's state forest management is essential to achieving true GPV. I encourage the Department to advance a plan that recognizes the equal importance of economic vitality alongside environmental and social stewardship.

Thank you for considering these comments.

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan.
I urge the Department to advance a management plan that supports working forests and rural communities. Please do not give in to anti-forestry activists' insatiable demands for more restrictions.
Over half of state forests have already been set aside for wildlife habitat and the Department's own modeling demonstrates those acres will over-deliver on environmental outcomes. Enough is enough.
Now is the time to focus on economic outcomes that will not compromise conservation goals already in place. Timber-dependent communities and families rely on these forests for stable employment and economic vitality.
Counties, taxing districts and schools depend on revenue from state forests for their budgets. Reductions in timber harvests not only jeopardize their ability to provide crucial services to their communities but also jeopardize the Department's self-sufficiency. ODF must generate revenue to sustain operations without burdening taxpayers.
For the sake of balanced management, fiscal responsibility and the long-term vitality of Oregon's forests and communities, please advance a forest management plan that focuses on economic outcomes.
Thank you for your time and consideration.

Subject: Urgent Public Comment on the Western Oregon State Forests Management Plan – Science Demands an End to Clearcutting and a Commitment to Regenerative Forest Stewardship
Date: Sunday, February 01, 2026 11:00:48 AM

You don't often get email from garlynn42@gmail.com. Learn why this is important

Dear Chair and Members of the Oregon Board of Forestry and Oregon Department of Forestry Staff,

I am writing to provide public comment on the proposed rule to adopt the Western Oregon State Forests Management Plan and associated policy direction. I urge you to recognize that the best available science leaves Oregon no policy choice but to end industrial clearcutting on public forests, to enact policies to prevent clearcutting on private lands, and to adopt a regenerative forest management framework that protects habitat, safeguards water quality, enhances climate resilience, and supports recreation and cultural values for all Oregonians.

Decades of industrial-scale clearcutting on Oregon's public forests have demonstrably degraded ecosystems, pushed species toward local extinction, and damaged water quality. Large clearcuts, especially when paired with the roads they require, exacerbate soil erosion and stream sedimentation, elevate water temperatures, and fragment wildlife habitat: all outcomes that are incompatible with the long-term health and resilience of forest ecosystems. Scientific understanding of clearcutting's impacts on wildlife habitats, soil and water systems, and carbon storage is unequivocal: this practice compromises the very natural systems that support biodiversity and community well-being.

The draft Forest Management Plan as proposed, which would effectively replace the existing Northwest, Southwest, and Elliott State Forest management plans, does not go far enough to correct the imbalance between timber extraction and ecological integrity. Nor does it respond to urgent climate realities, or the precipitous decline of salmon, spotted owls, marbled murrelets, and other species dependent on structurally complex, mature forests.

Even the habitat conservation plan (HCP) component that is being married to the Forest Management Plan cannot substitute for substantive changes to harvest practices. Environmental groups have noted that without binding commitments to shift away from clearcutting and toward extended rotations and uneven-aged management, water quality will continue to decline and imperiled wildlife populations will not recover.

The scientific consensus and best available ecological understanding make clear that regenerative forestry — management that fosters diverse forest structure, advances natural succession toward climax forest conditions, protects riparian and aquatic systems, and prioritizes long-term carbon sequestration — is the only defensible path forward. The Plan must explicitly ban large-scale clearcutting on all state forests and replace it with silvicultural approaches that emulate natural forest dynamics and support habitat continuity over time.

In practical terms, this means adopting longer rotations, prioritizing uneven-aged management systems, excluding high-value conservation areas from commercial harvest entirely, and aligning harvest levels with ecological carrying capacity rather than short-term revenue targets. It also means centering protections for old forests that are significant carbon stores and critical refugia for biodiversity, while also recognizing the cultural, recreational, and economic

values forests provide to Oregon's communities.

Oregonians value thriving forests as essential infrastructure for clean drinking water, climate mitigation, recreation, and rural economies. Anything less than a decisive break from clearcutting and toward regenerative stewardship fails both the science and the public trust. I urge you to revise this Plan accordingly and commit to forest policy that truly safeguards Oregon's ecological heritage for future generations.

Thank you for your consideration.

Respectfully,
Garlynn Woodsong

Dear ODF-

I'm writing to comment on the September 2025 Western Oregon State Forests Management Plan. I appreciated the clear way in which it was written and the land acknowledgement, but the plan doesn't go far enough in protecting wildlife, erosion, clean water, and habitat. There are ample private lands out there which can operate like corn fields to be harvested again and again, but the plan needs to go farther to protect public forests for old-growth and mature forest conditions while they still exist. My specific requests are:

1. End clearcutting on complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition.
2. Increase language in the plan that requires the use of best science available. We can do better than eyeballing decisions.
3. Make clean water for salmon and drinking water quality for people primary indicators of success.
4. Add more components of climate change/resilience into the plan, including a tie in to state climate change/carbon plans. This would include longer harvest rotations and more areas with no harvest.
5. Delete or amend Principle 3 in the draft FMP. We don't need to prioritize logging on state lands. Make wildlife, climate management, and public access more of a priority.

Sincerely,

Bruce Barbarasch

To Whom It Concerns,

The current state forest management plan (FMP) draft is unacceptable as written. Please address the many deficits and resubmit the revised draft for public review and further comment.

The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law. and require accountability. The FMP should be in full compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and/or the state legislature.

In order to bring balance back to state forests, amend the FMP which requires revenue from timber harvest to fund all of state forest management activities, thereby prioritizing logging over all other values in state forests. To restore healthy mature forests, you must halt all clearcut timber harvests. Clearcutting is horrifically destructive to all forest ecosystems and further dries out forests, leaving what remains nearby at greater risk of fire and drought. To ensure clean healthy waterways for salmon and all Oregon communities, you must develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

Thank you for your attention to these matters.
K Davis

Subject: A good Forest Management Plan!
Date: Thursday, December 11, 2025 4:20:30 PM

You don't often get email from fkongable@gmail.com. Learn why this is important

The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law. Healthy forests, especially old growth, help mitigate changes to our weather patterns! Logging can be done selectively or in small patches to protect soil carbon which is 40% or more of all forest carbon.

Bring balance back to state forests: Delete or amend the draft FMP which requires revenue from timber harvest to fund all of state forest management activities, which prioritizes logging over all other values in state forests.

- Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

- Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it alone won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Email to: Oregon Department of Forestry

Re: Amend the Forests Management Plan: Protect Mature/Legacy Forests

Date: January 23, 2026

I am calling on the Oregon Department of Forestry to make amendments to the draft Forests Management Plan in ways that require all actions in our state forests 1) be assessed by the highest standards of available science, and 2) be expressly bound to comply with laws, policies and performance metrics adopted by the Board of Forestry or the State Legislature.

I am writing as a longtime watershed restoration volunteer with the Johnson Creek Watershed Council and as a wildlife surveyor with Cascadia Wild, an organization that shares data with the Oregon Department of Fish and Wildlife. As an engaged stakeholder citizen, I also partook in the development of Oregon's Habitat Conservation Plan, a forward-looking policy design that will struggle to meet its prescribed goals unless there is enhanced protection of mature and legacy forests.

All things considered, I am urging ODF to amend the FMP as follows:

1) Halt all clearcut timber harvests in complex forest stands in Tillamook and Clatsop State Forests until 30% of those forests have gained mature, layered forest complexity. Doing so is imperative to enhancing habitat for the Northern Spotted Owl and Marbled Murrelet. not to mention the weave of biodiversity provided by mature and legacy forests for innumerable flora and fauna.

2) Ensure that the FMP will articulate specifics for the restoration of impaired watersheds toward a foreseeable goal of enhancing water quality and the health of our coastal salmon populations.

3) Add strategies to the FMP that will meet the designs of the Climate Change and Carbon Plan for state forests, preferably by establishing longer harvest rotations and reducing, even halting, clearcut harvests.

4) Discontinue citing timber harvests as the priority value of our state forests by significantly amending how monies from timber revenues fund the state's forest management policies and applications.

In sum, Oregon should provide leadership in the way of forest management

during this time of diverse challenges. A stronger, more balanced FMP is now more than ever necessary as a buffer against ecological realities and political uncertainties. We owe no less to future generations.

Thanks for receiving public comments.

Subject: Amend the State Forest Management Plan
Date: Friday, January 30, 2026 10:18:28 PM

You don't often get email from meissun@hotmail.com. Learn why this is important

This past decade, our family, friends, and so many other Oregonians have been in shock at the vast amount of logging in state forests that we cherish for multiple uses—recreation, hiking and foraging, plant and wildlife viewing, sequestration and erosion control, scenic beauty, and critical clean water resources. We are alarmed by what we have witnessed, particularly in the coastal range. ODF has violated rules and performance measures adopted by the legislature including the requirement that the best available science be used for the protection of complex mature forests and this must STOP. This draft plan should be amended to commit to following the law in terms of both compliance and accountability for our state's natural resource treasures. The state's management of these forests has favored industrial-scale clearcutting and it is long time overdue that the proposed plan be brought back into balance by focusing on restoring damaged ecosystems, enhancing water quality, centering scientifically-based ecological forest management and focusing on the recovery of at-risk species.

Amend the proposed plan to stop all clearcutting in complex layered state forest stands in the North Coast until 30-50% are preserved there as mandated by current policies. A legislative report showed ODF is a long way from reaching that requirement. To ensure timber sales are not prioritized over other important values and goals, delete Principle 3 in the draft FMP. New funding mechanisms need to be developed. Complex mature forests and impaired watersheds must be restored for human communities, aquatic species and salmon, and other wildlife. The mismanagement of our state forests has pushed 17 wildlife species and even more plant species to near extinction so specific strategies must be adopted within the FMP to complement and enhance those of the Habitat Conservation Plan so that they can survive and recover. The HCP alone will not ensure this.

The state's Climate Change and Carbon Plan and Executive Order 25-26 on climate resilience must be addressed in the draft plan through concrete strategies and clear timelines. Forests, wetlands, and healthy soils are critical carbon sinks for sequestration. Moisture, flood and erosion control, pollution amelioration, and so many other services forests provide must be recognized and valued with protection strategies developed to protect them.

It is critical that this very vague plan be amended and redone with specific strategies and goals to ensure that the above values are prioritized. The vast majority of Oregonians want these protections and a balanced approach to natural resource management. Oregonians do not believe that keeping the plan "vague on purpose" to "provide flexibility" is a good idea, especially in these particular times and existential climate crisis. Clearly this has not worked in

the past to achieve compliance with either the legal requirements or conservation and protection plans that are already on the books. We need stronger, not weaker, goals, strategies and timelines in this Forest Management Plan to get us back on track. We support the specific amendment recommendations submitted by the Center of Biological Diversity and 14 other organizations, many of which we are members or supporters. Thanks for your time and consideration.

Sincerely,

Diana Meisenhelter and Tim Crump

From: Jeanne Roy, 13505 SE River Rd., Portland, OR 97222
To: Justin Butteris, State Forests Division
Date: December 15, 2025
Subject: Proposed Forest Management Plan

Our state forests should place a priority on optimizing carbon sequestration through practices such as (1) protecting our mature and old-growth trees, (2) growing trees longer, and (3) maintaining a diversity of species, ages, and structures. Management practices should also contribute to the survival of wild salmon, provide habitat for threatened wildlife, and protect clean drinking water.

Therefore, I ask that the draft Forest Management Plan be amended in the following ways:

- Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- Develop management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years.
- Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.
- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it alone won't lead to the recovery of these species. The Forest Management Plan should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Dear Decision Makers,

Business as usual is not a responsible decision. Rules crafted for short-term profit will destroy the long-term economic viability of our natural lands. We need to add to and replace the resource of older trees and forests managed for long-term health.

A long-term plan needs to reference changing science that tracks a changing climate. It needs to have strong reporting so that the decision makers can ensure they are not being taken advantage of and their plan disregarded.

There is a reason you are a decision maker. Please use your power to preserve and grow the strength of Oregon forests, which create long-term economic strength and increase the quality of life for all Oregonians.

Date: Monday, January 19, 2026 6:19:10 PM

You don't often get email from president@350eugene.org. Learn why this is important

Dear ODF,

My name is Patty Hine. I am a retired Navy officer and college instructor. I have lived rurally in Lane County for over 30 years and have hiked and backpacked many miles in the west Cascades and Coast Range. I go to the forests to restore myself and retreat from the stresses of modern life. It is my sole form of recreation.

Thirteen years ago my wife and I started a non-profit with the mission to help build the grassroots movement to stop the worst effects of global warming. Over the years we came to understand that we not only needed to switch from planet-heating fossil fuels to clean renewable energy sources like wind and solar, but we also needed to protect and restore the natural systems that store and pull harmful CO2 out of the atmosphere - our natural lands, especially forests.

The climate crisis is here in Oregon and we must adapt. Our state forests should place a priority on practicing climate-smart forestry, which optimizes carbon sequestration, storage and resilience and minimizes greenhouse gas emissions.

Such practices include protecting our mature and old-growth trees, growing trees longer, and maintaining a diversity of species, ages, and structures.

ODF's own Climate Change and Carbon Plan calls for growing older trees and setting aside carbon reserves, but the draft Western Oregon forest management plan continues a business-as-usual approach that prioritizes timber sales and revenue over climate-smart forestry.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests.

From now forward, the ODF must manage state forests in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

It is your civic duty to uphold these protections. You are the agency that represents Oregonians and protects our forests because they provide us with clean and plentiful water, and are where our biodiversity thrives or dies.

Thank you.

Sincerely,
Patty Hine

You don't often get email from zaporegon123@gmail.com. Learn why this is important

Dear ODF,

My name is Debra McGee and I have lived rurally in the Willamette Valley for over 40 years. I have hiked and backpacked on hundreds of miles of trails in the Coast Range and the westside of the Cascades. I am restoring the oak forest on my acreage.

I am also the founder and lead organizer of a climate justice group. I have learned how important mature and old growth forests are to storing planet-heating CO2 and how these are our most precious and readily available climate solution... but we have to manage them differently than we have in the past. We must change. And we must change fast.

As you take comments on your FMP, I strongly urge you use the most current science. There's no doubt, we need longer rotations and dramatic reductions in large-scale clearcutting. It's clear. So clear. The scientists know and show it, but the timber industry fights it because it reduces their profit.

But profits are not as important as preserving the natural systems on which all life depends...

We must develop forest management and restoration plans for watersheds with impaired water quality to levels healthy for salmon and support safe drinking water.

The Habitat Conservation Plan can not prevent or recover imperiled species alone. The FMP should include specific strategies to contribute to the meaningful (actual) recovery of the 17 species being logged out of existence in these forests.

Thank you for your work. The time for change is now. Our state forests deserve our protection and careful management for all the living things within and around them and to preserve a livable climate. Forests represent a sacred trust and you are the ones in the important position to fulfill that trust. Please act with haste.

Sincerely,
Debra E McGee

I would like to submit a comment on the draft Forest Management Plan urging the end of clearcutting on mature, multi-layer state forests. Mature forests support plants, animals, and fungi that cannot survive in younger, less-complex ecosystems. In Oregon, this includes the Northern Spotted Owl, the Marbled Murrelet, and other imperiled species.

Using only revenue from timber harvests to fund all state forest management activities would continue to prioritize logging over all other values and neglect the other value that state forests can bring in recreation, water quality, air quality, and climate. State forests belong to all Oregonians, and this resource should be managed sustainably so that future generations can benefit from it.

Sincerely,
Dr. Ann Rasmussen

Subject: Comment on proposed Forest Management Plan
Date: Wednesday, January 28, 2026 3:53:37 PM

You don't often get email from jstewart@hartford.edu. Learn why this is important

Dear Justin Butteris,,

I have many reservations about the proposed Forest Management Plan (FMP) and most deal with its discussion of the Greatest Permanent Value (GPV) as a management goal. The first mentioned element of GPV in the proposed FMP is “Sustainable and predictable timber harvest and revenues.” Although these revenues provide direct, tangible support to county governments and the forest management bureaucracy, timber sales should be much lower in the list of important GPV elements. Of far greater, but less tangible, value are diverse forest ecosystems that provide good habitats for wildlife and that help clean our air and water, which in turn provide recreational opportunities that produce much greater revenues for our communities.

In particular:

- The draft FMP lacks specific, measurable, and enforceable goals, contrary to OAR 629-035-020. The promise to use the Adaptive Management Plan to develop goals and evaluate strategies is a delaying tactic, given previously required goals and strategies.
- Ecological forest management is referenced but not implemented, leaving out essential practices such as long rotations, variable retention harvests, and legacy tree retention.
- Timber harvest performance measures conflict with state law, risk unsustainable harvest levels, and improperly segment forests for timber production rather than GPV.
- Climate policy is largely absent, despite binding Board-adopted plans and Executive Order 25-26 requiring accelerated climate action and additional forest protections.
- Older forests and complex layered stands are critically underrepresented, with less than 6% of stands over 100 years old and only 11.75% in complex condition—far below the 30–50% target in the 2010 FMP.
- Aquatic, wildlife, and watershed protections are insufficient, lacking strategies to restore impaired waters, protect drinking water sources, or ensure habitat recovery for threatened species.
- Recreation, scenic resources, and social benefits are inadequately addressed, despite their statutory inclusion in GPV.

Major Recommendations

- Revise the FMP to include SMART goals (specific, measurable, achievable,

relevant, time bound) grounded in best available science.

- Fully integrate ecological forest management with clear strategies, performance measures, and timelines.
- Eliminate the timber harvest performance measure and ensure harvest levels remain sustainable and legally compliant.
- Implement the Climate Change and Carbon Plan, establish a carbon market system, and meet EO 25-26's requirement to protect an additional 10% of state forest lands.
- Protect older forests and complex stands, including a moratorium on harvesting existing complex layered stands and retention of all trees over 100 years old.
- Strengthen aquatic and wildlife protections, including expanded riparian buffers, reduced pesticide use, and watershed restoration plans.
- Address road impacts, prioritize decommissioning, fish passage improvements, and erosion reduction.
- Restore recreation and scenic resource planning, including alignment with the 2023–2026 Recreation Strategic Plan.

Sincerely,

From: Ellen Mendoza
To: SFCOMMENTS ODF * ODF
Subject: Comments off the 2025 FMP
Date: Friday, January 30, 2026 4:11:17 PM

You don't often get email from ellenmendozalido@gmail.com. Learn why this is important

The following are my comments on the Draft 2025 Western Forest Management Plan.

I am a longtime resident of Oregon. I live here because of the forests, mountains, deserts and coast. I hike and camp, and appreciate the natural environment, as do most residents of Oregon. We live here for the beauty and natural riches of Oregon. Note that the state forests are only three percent of Oregon's forest resource.

The state forests are owned by the public at large. They were established after logging companies cut all they wanted and then left the lands stripped. The State legislature devised a solution that would put the forests in state control, replant them, and then draw the agency's budget from revenues from logging. The State shares those monies with the counties that contain the harvested acreage. This has created a partnership that encourages harvest of timber over any other activities because both the agency and the counties have everything to gain from harvesting timber as much and as fast as possible.

The statutes establishing the state forests require that the State Forester, under the direction of the State Board of Forestry "secure the greatest permanent value of those lands to the state." ORS 530.050. The statute goes on to list the activities the State Forester may engage in. Protecting the lands from fire, disease and insect pests is the first activity mentioned. ORS 530.050(1). Of course timber harvest is given prominence, but the statute also allows the State Forester to:

> Permit the use of the lands for other purposes, including but not limited to forage and browse for domestic livestock, fish and wildlife environment, landscape effect, protection against floods and erosion, recreation, and protection of water supplies when, in the opinion of the board, the use is not detrimental to the best interest of the state.

ORS 530.050(5). Rulemaking under this statute has resulted in further embellishment of the phrase "Greatest Permanent Value" (GPV) to include "healthy, productive, and sustainable forest ecosystems that over time and across the landscape provide a full range of social, economic, and environmental benefits to the people of Oregon." OAR 629-035-0020(1). Thus, GPV includes a wide range of objectives associated with the forest. The question is how to decide what the best use for each part of the forest acreage under the direction of the Oregon Department of Forestry (ODF). Sadly, this plan does not include any decisions for how to do this, either at the state or forest level. Instead the plan is a compendium of concepts, and references to other documents, without any direction on

what should be done on the ground. This leaves the decisions out of the public eye, and subject to the whims of lower level bureaucrats. No matter how the FMP is read, it can justify any decision at any time. The FMP must be revised to create an actual plan with clear strategies to achieve "healthy, productive and sustainable forest ecosystems."

Comments

1. To maintain "healthy productive and sustainable forest ecosystems" requires following scientific principles for ecological forest management practices. This includes saving the stands of layered, older trees, those eighty years old or more. These stands are a very small percentage of state forest acreage, which makes them even more precious. At least until the legislative Key Performance measure of 30% older forest is reached, ODF should be preserving all stands of older layered forest. This will help wildlife, water supply and carbon storage goals. The statutes do not require that ODF cut all the trees. Ecological principles also include the minimal use of pesticides, longer rotations, and smaller scale harvests.

2. Any sustainable harvest goals should be consistent with ecological forest management and achievement of the other goals under GPV. For example, timber harvest should not impact domestic water supplies. A planned timber sale, found to impact a water supply should be diverted or abandoned, rather than scheduled.

3. In order to achieve GPV over the landscape, each natural area should be evaluated for its highest values and then designated as such. The FMP should set those evaluations in motion.

4. This plan should evaluate the state forest land in context with the land around it. For example the state forest land that is adjacent private forest land, must consider the private owner's logging schedule when evaluating the cutting of state owned stands. Also, preserving landscape nearest to towns for recreation, will obviously be more impactful than designating an area that is difficult for the public to reach or even see.

5. The FMP should explicitly integrate the other mandates for action; such as the Climate Change and Carbon Plan, Vision for Oregon Forests and Executive Order 25-26.

6. The plan uses the term "social benefits" inappropriately. The statutes do not use that term. OAR 629-035-0029 vaguely refers to GPV as including "a full range of social, economic, and environmental benefits to the people of Oregon." However, the list of what constitutes GPV does not include " direct and indirect financial contributions to

local and state governments, … and support for diverse local employment opportunities." (Principle 4). ODF has no mandate to make financial contributions to state and local governments, or to support employment. Of course it does have a statutory mandate to share timber revenues with the relevant counties, but that arrangement should not be enlarged.

7. The plan does set actual standards for maintaining healthy watersheds for people and wildlife. Add a requirement to use the best available science to determine management decisions, including timber harvest, within watersheds with impaired water quality or stream flows. Develop forest management and restoration plans and timelines for watersheds with impaired water quality. Restore headwater stream functions by requiring minimum 50-foot no-cut buffers for type Np and Ns streams. Protect and enhance drinking water sources by eliminating pesticide and herbicide use in drinking watersheds. Protect and enhance drinking water by eliminating clearcut logging practices in drinking watersheds.

8. Prohibit salvage logging in HCAs and RCAS. Avoid steep erosion-prone slopes. Retain the largest healthy trees, downed logs and snags for habitat, soil recovery and erosion prevention.

9. 4300 miles of roads in the Western State Forests is nothing to be proud of. The roads system should be evaluated for decommissioning where possible to improve wildlife habitat.

10. Develop more non-motorized recreation in ODF lands. These forests should offer hiking, biking, interpretation and camping opportunities for people who live in the Portland area and other towns close to the forests. The few places where there are trails, should not be impacted by logging.

11. Revise the carbon storage goal as follows, "Increase carbon sequestration and storage on state forest land. Set measurable targets, such as increasing carbon sequestration by at least 100%. Include the Executive Order 25-26 in the FMP. Accelerate carbon sequestration and storage. Protect an additional 10% of forests in 10 years, focusing on forest stands 90 years old or older with complex layered forest conditions.

12. Protect, maintain, and enhance habitat for threatened and endangered species and other species of concern. The following considerations are used to implement this strategy. Comply with state and federal ESA requirements and adopt management approaches that contribute to the persistence of threatened and endangered species.

Implement the HCP and associated conservation actions targeted to benefit the species covered under the Incidental Take Permit. Conduct species assessments during IP development and related revisions to determine which species warrant special consideration and whether existing conservation measures are adequate.

Thank you for careful consideration of these comments.

The continued clearcutting of mature forests (>80 years old) MUST stop. I urge you to halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are restored, as required by current rules and policies. It is imperative that our Forest Management Plan (FMP) is based on the best science available. Please include a requirement for any actions to be based on the best science available, **as required under existing law**. It is essential to develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years. The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you!
Carole Miles, Oregon Naturalist, Oregon Master Melittologist, and concerned Oregon citizen

Chair Kelly
Oregon Board of Forestry – State Forest Division
2600 State St
Salem, Or 97310

Public Comment to Oregon Board of Forestry on the Forest Management Plan

Dear Chair Kelly, Interim State Forester Kate Skinner, Members of Oregon Board of Forestry

MCAT has been advocating with the Board for many years now the need to practice climate smart forestry and to finally implement the Climate Change Carbon Plan that for too long has simply been ignored. Climate smart forestry optimizes carbon sequestration, storage and resilience while minimizing greenhouse gas emissions. Practices include growing trees longer, protecting mature and old growth trees and maintaining a diversity of species, ages and structures. Sadly, the FMP does not achieve the aim of climate smart forestry and ignores the Climate Change Carbon Plan. This Plan needs to be applied across all of ODF.

We urge you to **protect our legacy forests and stop clearcutting on state forest lands**. The FMP does not ensure that our state forests are providing the Greatest Permanent Value as clearly the climate crisis the state faces demands that we increase carbon sequestration and storage. In fact, we now have the opportunity to change ODF's revenue model by following in the footsteps of the Elliott Forest and **engaging with carbon markets**. **We can thus achieve a win/win by growing our trees longer and generating revenue.**

A number of other ecosystem services are achieved by practicing climate smart forestry including meeting the needs of endangered and threatened species. The FMP needs to ensure that fish and wildlife can thrive. Though the HCP has been a step in the right direction, the proposed plan fails that test. **A business as usual approach with clearcutting of mature forests is not ecological forestry.** We need to both manage across multiple landscapes while also practicing biodiversity conservation.

All future practices must use the best available science. Stop prioritizing logging over all other needs. Importantly the FMP needs to be designed to ensure that a minimum of 30% of our state forests are complex layered forest stands. One of the tragedies of the proposed FMP

is that it will further degrade our watersheds. Instead, we need to ensure practices that restore water quality to the levels needed for salmon and other aquatic species.

Our forests on the wetter west side of the state are among the most carbon dense in the world and yet the FMP simply ignores this extraordinary capacity and takes us in the opposite direction with where we need to go. We can do better. The CCCP suggested that Oregon could be a model for other states in practicing climate smart forestry, yet we essentially are continuing to practice forestry as if nothing has changed over the past 50 years. We can learn from our mistakes. Change is hard and often challenging, yet the times call for change. Our hope is that the new State Forester will recognize that one of the most critical things needed done in ODF is to change the culture from one that is focused on timber production to one that practices authentic climate smart forestry. Do the right thing and let our forests become the elders we look up to.

Sincerely,

Rand Schenck
MCAT Forestry and Natural Lands Lead

** MCAT is a community of experienced volunteers, sponsored by **OLCV**, who help steward significant greenhouse gas reduction policy into law in Oregon. MCAT also actively organizes to elect and support legislators who will work for strong climate legislation.

Pease accept these comments from me on the draft Forest Management Plan:

1) It is very difficult to read this document and understand the real thrust of these policies, particularly what they mean for the priority of conserving complex and mature forests. There is no clearly stated goal for the percentage of total non-HCP forests of this type to be conserved through prohibition of logging and other invasive practices or uses, only a promise to balance vaguely stated principles when crafting future specific are plans.

2) There should be a clearly stated numerical goal - *in this Plan* - for conservation of remaining complex and mature forests, including the portions of these that extend beyond narrow, regulated stream corridors . This goal should be stated in terms of the total percentage of all currently existing non-HCP complex and mature forest areas that should be protected and conserved by prohibiting logging and other invasive practices and uses within them.

3) This conservation and protection goal should represent a very substantial portion of the existing complex and mature forest areas areas (75% or more) and define the practices that will be used to ensure this goal is met.

4 All existing (currently remaining) complex and mature forest areas should be mapped in detail and included in the Forest Management Plan as a 2025-26 baseline for informing specific subsequent protection and conservation efforts over the life of the plan.

5) Any planned or potential loss of complex or mature forest areas through the creation of specific area plans should be mapped and stated in terms of both acreage and the reduction of area from the 2025-25 baseline and against rerunning total of baseline versus the Forest Management Plan's goal of conserving a minimum percentage of that baseline area; e.g against 75% of all 2025-26 complex and mature forest area overall.

6) Without the discipline outlined above, public trust in the conservation and protection goals for complex and mature forest areas set by the Plan cannot be sustained and the balancing act between the Draft Plan's vague and technocratic principles employed on an area-by-area basis will be viewed as simply a means to sacrifice these precious forest areas and qualities that should be preserved over the life of the Plan.

I am submitting the following comments on the Oregon Forest Management Plan during the public comment period ending on January 31, 2026.

Name: Pat Kaczmarek
Address: 4709 SW 31st Drive, Portland, Oregon
Phone: 503.975.7742
Email: patk5@msn.com

As an Oregon citizen, and environmental advocate, I would like to offer the following comments on the Forest Management Plan (FMP).The plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species.

The Oregon Department of Forestry (ODF) has not been following the requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests. The ODF must manage state forest in compliance with all existing rules and policies.

The draft Forest Management Plan must emphasize accountability and compliance. I urge you to make the following amendments to the draft plan:

1. A requirement should be added for all actions to be based on the best science available, as required under existing law.

2. Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

3. Amend Principle 3 in the draft FMP to require revenue from timber harvest to fund ALL of state forest management activities. Do NOT prioritize logging over all other values in state forests in violation of state law.

4. Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

5. Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

6. Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek's Executive Order 25-26 on climate resilience.

7. Shift to longer rotations between harvest and eliminate large-scale clearcutting.

8. Implement the Habitat Conservation Plan (HCP) to prevent the local extinction of imperiled fish and wildlife.

9. Include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

As residents and citizens of Oregon for more than 50 years, my husband and I are writing to provide comment to the Oregon Department of Forestry plan.

As we manage and navigate our resources benefit of our people and our communities is paramount. The primary consideration for all aspects of the plan must be to provide safe, drinking water for all Oregonians.
Humans cannot live without water. If the community water system is tainted or polluted the health and liability of our people is in jeopardy. Tainted and polluted community water systems also harms and jeopardizes the animals, fish and livestock.
Clean and health community water systems must be held as a permanent value by ODF now and into the future.

No logging and no pesticide use should be permitted in any area that affects and is part of a community water system. This is critical for both private and public land owners as pollution, poison, and tainted water know no boundaries or property lines.

Thank you for considering our comments for the plan.

Dear State Forests Division Justin Butteris,

I'm writing because I'm opposed to clear-cutting in Oregon's mature and old-growth forests. There are precious few of these stands of trees remaining, and it is imperative that they are preserved for recreation, clear air & water, and habitat.

I am not opposed to sustainable logging practices, but clear-cutting is disastrous practice that does irreversible damage to our forests.

Subject: Don"t leave rural Oregon behind
Date: Tuesday, January 27, 2026 11:16:43 AM

Dear Forestry Department,

Thank you for the opportunity to provide input on the Western State Forest Management Plan.

I strongly encourage the Department to adopt a plan that prioritizes the needs of working forests and the rural communities that depend on them.

For the sake of balanced stewardship, financial stability, and the long-term health of Oregon's forests and rural communities, it is vital the Department move forward with a plan that emphasizes strong economic performance.

A substantial portion of state forestland has already been dedicated to wildlife habitat, and the Department's own projections show these areas will more than meet environmental objectives. Further restrictions are unwarranted.

With these conservation commitments already secured, the focus should now shift toward ensuring sustainable economic outcomes. Countless families and timber-reliant communities depend on responsible forest operations for steady jobs and economic stability.

Additionally, revenues from state forest harvests are vital for counties, schools and local taxing districts. Curtailing timber production threatens their ability to deliver essential public services and undermines the Department's requirement to remain financially self-supporting. ODF must continue generating the revenue needed to operate without shifting costs to taxpayers.

It is important that the Department resist ongoing pressure from anti-forestry groups seeking additional limitations that are neither necessary nor balanced.

Thank you for your consideration.

Our state-owned forests are an exceptional opportunity to create and maintain the diverse environments that our wildlife requires and to offset the excesses of private commercial logging. I am counting on you to create a plan that will preserve and foster mature forests to balance the young plantations found everywhere in Oregon. Logging these mature forests to fund all of state forest management is a bad idea. You can do better!

Please make these common sense changes to the draft plan: require using the best science available for management decisions, follow all current laws, stop cutting mature forests until they comprise at least 30% of the stands, protect watersheds, manage for climate change, and work to recover the species that are declining. And no big clear cuts--we know they are a bad idea!

We all own those state forests and Oregonians really care about them. Thank you for your consideration.

To the Oregon Board of Forestry:
<!--[if !supportLineBreakNewLine]-->
<!--[endif]-->

I would like to see the draft Forest Management Plan amended to strengthen conservation of mature forest habitats. It should commit to restoring healthy forests and clean waterways for salmon and people.

For a starter, it should include a requirement that all actions should be based on the best available science. Principle 3 in the draft FMP, which would require revenue from timber harvest to fund all state forest management activities, should be deleted. As drafted, it would mean prioritizing logging over all other values in state forests, in violation of state law.

The FMP should help build climate resilience by including strategies to implement the Climate Change and Carbon Plan for state forests. It should reduce reliance on large-scale clearcutting and shift to longer rotations between harvests. Establishing a carbon market program would help toward this goal.

Current rules and policies require that 30% of North Coast state forests should consist of complex layered forests. Until this objective is achieved all clearcut timber harvests of such stands should be halted.

Finally, it’s important that the FMP require compliance with applicable laws, policies, and key performance measures adopted by the Board of Forestry or the state legislature.

Thank you for your consideration.

Shouldn't the Guidelines include a reference that decisions regarding implementation be based on the best available science, which is required by existing law?

1. I totally disagree with Principle 3. The priority of logging over all other values of state forests is against the law.
2. By not limiting clearcuts of complex layered forest stands the state forests will not be forests but tree plantations. There should be a minimum of 30% in complex layered stands as required by current rules and policies.
3. The state needs to develop forest management and restoration plans for watersheds with impaired water quality to restore water quality levels healthy for salmon and other aquatic species within 10 years.
4. Climate change continues to alter the growing and sustainability of trees. I would like to see longer rotations between harvest, reduce large-scale clearcutting, thereby storing more carbon.
5. The FMP needs to have a plan on how it will contribute to the recovery of the 17 species that are clinging to survival.

Please include my comments into the public record.

Oregon state forests comprise over 600,000 acres of temperate rainforest. The two largest tracts of state forest are the Tillamook and Clatsop on the North Coast. Historically this area provided ample habitat for Northern Spotted Owls and Marbled Murrelets and supported huge runs of salmon. However, after decades of large-scale clearcuts and overharvest, 17 species including 10 fish species, 3 amphibians as well as coastal marten, red tree vole, Northern Spotted Owl and Marbled Murrelets have been pushed to the brink of local extinction. Mature forests (older than 80 years old) continue to be clearcut despite regulations requiring protection of older legacy forest stands. “Legacy forests” are structurally complex, mature, naturally regenerated forests that have retained traits of the native forests that preceded them.

ODF set a target to retain 30-50% of older forests over a decade ago. Currently less than 14% of mature complex forest is left and continues to be logged. As a result ODF is required to adopt a new Forest Management Plan that is in conformance with the Habitat Conservation Plan (HCP) that the Board of Forestry adopted in 2024. The HCP does represent progress, but it alone won’t result in the recovery of endangered salmon and wildlife populations.

It’s time for a strong Forest Management Plan!

Sincerely,
Don M Kuhns

Dear Members of Oregon Department of Forestry,

Over the years I have tried to convince administrators and legislators to protect wildlife for its own sake. This includes restoring healthy forests, providing clean waterways where salmon and other aquatic species can thrive, and protecting endangered species. However, the profit motive has too often eclipsed consideration for wildlife.

I therefore must appeal to your concern for future generations of people. Our children and their children will want to live in a world where there are healthy forests, fresh air, and clean water. They will want to enjoy a climate that is milder and with less extreme weather events caused by climate change. They will want to share this earth with other species. We should not leave a legacy for them of a concrete world that is hot and turbulent. This means applying science to best protect the natural environment while making logging decisions and not merely relying on immediate financial gain.

Sincerely,

Hillary Tiefer, PhD

RE: Forest Management Plan Rulemaking Comments

To whom it may concern,

Thank you for the opportunity to comment on the draft Western Oregon State Forests Management Plan (FMP) on behalf of Hampton Lumber. Hampton Lumber is a fourth-generation, family-owned company with sawmills in Oregon and Washington. Our company, along with our employees, contractors, and the rural communities we serve, depends on robust, predictable, and sustainable timber harvests from state forests managed by the Oregon Department of Forestry (ODF). As such, the outcomes of this FMP are critically important to our operations and to the economic and social well-being of communities that rely on ODF timber sale activities.

We appreciate the FMP's acknowledgment of the benefits of active forest management and timber harvesting, as well as the role these activities play in helping ODF achieve Greatest Permanent Value (GPV). However, the FMP continues to place an outsized emphasis on conservation outcomes, which is unnecessary given that this document is intended to be a companion to the Habitat Conservation Plan (HCP). Throughout the development of the HCP, conservation outcomes have been the primary focus; therefore, we believe **this FMP should place at least equal emphasis on economic outcomes and the sustained provision of what timber resources remain.**

As drafted, the FMP could introduce additional restrictions on acres otherwise available for timber harvest beyond extensive protections already adopted under the HCP. Such an outcome would further threaten existing forest products infrastructure and the communities that depend on reliable timber supply. This FMP disproportionately impacts rural, underserved communities that are already being deprived of economic opportunities. Predictability and balance are essential for maintaining the long-term viability of these communities and the businesses that support them.

In addition, the FMP appears to give insufficient consideration to the economic needs of ODF itself. Since the implementation of the HCP, harvest levels have declined, resulting in reduced revenue to the State Forests Division. This trend places increasing pressure on the Forest Development Fund (FDF) and raises the risk of avoidable budget reductions and staff layoffs. It would be imprudent to assume that alternative funding sources will reliably offset these revenue losses. A more stable and sustainable approach would be for ODF to maximize harvest volume on the acres that remain available—both inside and outside of

Habitat Conservation Areas—to generate the revenue necessary to support State Forest Division operations.

The HCP was designed to prioritize conservation. The FMP must now do the work of ensuring economic stability and community well-being. This is where balance must be delivered—not promised—by meaningfully realizing the economic values of GPV.

In addition to these broader concerns, please consider the following comments organized by FMP Chapters.

Chapter 1: Introduction

Guiding Principles

Since the Board of Forestry has already adopted these Guiding Principles, it is unclear to what extent they may be modified through this process. Nonetheless, we respectfully offer the following feedback for consideration in how these principles are reflected and implemented within the FMP.

- We support the first principle being grounded in GPV. However, as drafted, the FMP does not appear to place equal emphasis on the economic, environmental, and social components of GPV.

- Principle 3 (Revenue) is fundamental to the core purpose of ODF's management of state forest lands, and we support this principle as written.

- Principle 4 references both direct and indirect revenue; however, these benefits are only minimally acknowledged in the FMP's summary. **This principle and its importance to local economies and state forest management should be strongly emphasized.**

- Forest restoration, as described in Principle 5, is essential to the long-term health and productivity of state forests. Timber sales and the revenue they generate are the most effective and reliable means of achieving these restoration goals. This principle underscores the need to fully utilize available acres for restoration work, both outside of—and where appropriate, within—Habitat Conservation Areas.

- Principle 7 states that the FMP will provide a predictable and sustainable flow of timber. While we generally support this objective, the current draft does not provide sufficient certainty that this outcome will be achieved in practice.

- Principle 10 notes that ODF "seeks diverse input from Oregonians." **We ask that input from timber purchasers and operators be strongly considered**, as we work closely with ODF and play a key role in implementing the FMP and helping ODF achieve its goals. **We also encourage ODF to involve purchasers and operators earlier in future drafting processes** so that our input can be meaningfully incorporated.

- We appreciate the recognition in Principle 12 of carbon storage in wood products and the role these products play in mitigating global climate change. While the FMP notes that marginalized

communities will disproportionately experience the impacts of climate change, **it would be helpful to also acknowledge that rural communities are marginalized communities**. They not only acutely experience the impacts of climate change but also the economic toll that climate change and policies can inflict.

Plan Themes

We recommend adding an additional FMP theme focused on delivering direct and indirect economic benefits from state forest management. While the inclusion of GPV as a theme is an important starting point, the economic benefits derived from state forest management warrant explicit recognition, given their significance to rural communities and their role as co-equal objectives alongside the other FMP Themes.

- **Greatest Permanent Value:** We appreciate that the "icons" used in the previous draft FMP have been removed from the goals, as they created unnecessary confusion and conflict. As a result, Figure 1-1, which references those icons, can also be removed from this draft.

- **Considering and Engaging All Oregonians:** This theme is generally appropriate; however, the final sentence referencing "adapting to Oregon's changing demographics" raises concern. Forest management decisions should be guided primarily by best management practices and the best available science. While public input is an important consideration for public land managers, management decisions should be grounded first and foremost in tested and studied forest management practices.

- **Climate Change:** We appreciate the acknowledgment of timber production and wood products as tools to address climate change. This recognition should be given substantial weight when evaluating alternative climate strategies that could further restrict timber harvesting activities and local wood products manufacturing.

- **Sustainability:** As drafted, this theme could be interpreted as signaling a move toward less active forest management. **We encourage ODF to more clearly articulate a balanced approach that recognizes active management as a critical component of long-term forest health, resilience, and productivity.**

Chapter 2: Management Approach

The management approach described in the FMP places substantial emphasis on "ecosystem services" and "ecologically sustainable management," which could be interpreted to suggest that timber production is, at best, a secondary byproduct of other objectives. While the FMP references the balance the HCP is intended to achieve between Habitat Conservation Areas (HCAs)—which are largely managed through passive approaches—and non-HCAs—where active management and timber production are the primary objectives—this distinction is not consistently or clearly reinforced.

The bifurcation of management between HCAs and non-HCAs was intentional and fundamental to the HCP's design. The extent of conservation areas and associated restrictions under the HCP was explicitly intended to be offset by active management on lands outside of HCAs, allowing ODF to continue

managing state forests while meeting conservation commitments. This includes harvesting what some may refer to as "older stands" outside of HCAs. **It would be helpful for ODF to more clearly remind the public of these intended outcomes and the rationale behind them.**

As drafted, the FMP continues to lean more heavily toward conservation-focused approaches that have already been established through the HCP, rather than clearly articulating the management strategies available on non-HCA lands. Before adopting specific management prescriptions, the tradeoffs associated with these approaches—including their impacts on timber availability, revenue generation, and forest management objectives—should be fully considered and clearly communicated.

Chapter 3: Forest Resources, Goals, and Strategies

Hampton Lumber provided comments on the goals and strategies during ODF's earlier outreach and feedback process before drafting the FMP. We appreciate the updated versions included in this draft and offer the following additional comments and concerns for consideration.

- **Timber Management:** We appreciate that timber production is identified as the primary goal, supported by practical strategies such as sustainable harvest objectives and timber salvage. We recommend adding a strategy to track and publicly report the direct and indirect benefits of timber management activities. Each timber sale, including salvage sales, provides numerous economic, social, and environmental benefits to Oregonians, and **this information should be readily accessible and transparent to the public. This concept could also be incorporated as a goal or strategy under Recreation, Education, and Interpretation.**

- **Carbon:** The FMP summary notes that timber harvest results in a portion of sequestered carbon being released back into the atmosphere through harvest operations and the decay or burning of residuals. While this is accurate, the magnitude of these emissions is often overstated, taken out of context, and frequently used to argue against active forest management. The FMP would benefit from additional context regarding the full carbon life cycle, including long-term storage in wood products and substitution benefits.
    - Figure 3-9 is also problematic in its presentation, as it color-codes portions of the carbon cycle and uses brown shading for wood product manufacturing, which may imply a negative impact relative to green-coded components. As acknowledged elsewhere in the FMP, wood products are an important part of addressing climate change. Alternative diagrams, such as those developed by the U.S. Forest Service, **may better illustrate the full carbon cycle.**
    - Figure 3-10 could also be misleading. Displaying an average as a reference line may suggest that some districts are below a target level that does not actually exist. **We recommend removing the "District Average" line to avoid confusion.**

- **Aquatic and Riparian Resources:**
    - The goals for aquatic and riparian resources will be achieved through implementation of the HCP, and additional restrictions beyond those commitments are unnecessary.
    - The Drinking Water goal states that ODF will "maintain" and "enhance" drinking water sources for private and domestic use. It is unclear how ODF would directly achieve this objective, particularly for sources outside of its control. We would note that active forest

management can contribute positively to watershed health; however, the current language could be interpreted to require outcomes that extend beyond ODF's authority.

- **Wildlife:**
  - Wildlife-related goals will be achieved through implementation of the HCP, and further restrictions are unnecessary.
  - We support the strategy to manage for a diverse array of seral stages and encourage ODF to emphasize this concept consistently across other planning documents, including references to maintaining complex habitats of all ages and types.

Chapter 4 – Guidelines

Implementation Priorities

The draft discusses varying levels of concern regarding revenue and reserves in the FDF and references the potential use of external funding to address those concerns. Historically, the State Forests Division has been funded almost entirely through timber sale revenue. Since implementing the restrictions of the HCP, harvest levels have declined, placing additional strain on the FDF.

The FMP harvest modeling done to date demonstrates that achievable harvest levels exist that would maintain timber harvest and revenue near historic averages. However, the draft does not address this modeling, nor does it indicate the type, intensity, or frequency of harvesting the ODF intends to pursue under the FMP.

We request that ODF be more prescriptive in this document by clearly identifying that maximizing harvest volume on acres available for management is the preferred management approach moving forward. Provided that HCP commitments are fully met, there is no scientific or policy basis for selecting harvest levels below those that maximize sustainable harvest volume on available acres.

Implementation Responsibilities

The draft notes that Area Directors and District Foresters have roles in implementation through corresponding district-level planning documents. However, these leaders and their field staff have not been sufficiently involved in the development of the FMP or the companion HCP. **ODF staff who manage state forests on a day-to-day basis should be engaged early and consistently when changes to management strategies are being considered**. Their on-the-ground expertise is critical to understanding how proposed policies will function in practice and is essential to the successful implementation of any directive.

Decision-Making and Adaptive Management

Similar concerns apply to the limited involvement of stakeholders who support ODF in achieving its management objectives and who rely on state forests for generating GPV. When ODF seeks to address a perceived issue, individuals with direct, on-the-ground knowledge of state forests must be meaningfully involved in the decision-making process. **It is equally important that those who depend on state forests for economic outcomes are engaged throughout these processes.**

The outcomes and tradeoffs associated with management decisions must be fully evaluated and transparently discussed before decisions are finalized. During the development of the HCP and this FMP, these conversations were largely absent, resulting in stakeholder mistrust.

Key Monitoring Needs

We request that economic outcomes be explicitly included as a key monitoring need. As noted previously, ODF should track and report both the direct and indirect economic outcomes associated with timber harvest activities. This information should be readily accessible to the public so that, when management tradeoffs are considered, the full consequences of changes in management practices are clearly understood.

In closing, Hampton Lumber urges ODF to revise the draft FMP to more clearly and consistently reflect its statutory obligation to deliver GPV through a balanced approach that gives equal weight to economic, environmental, and social outcomes. **The FMP should**:

- Explicitly prioritize predictable and sustainable timber harvests on acres available for management.
- Fully account for the economic implications of management decisions.
- Rely on active forest management as a cornerstone of forest health and resilience.

All Oregonians—and especially the forest-sector workers and counties directly involved in managing and stewarding state forests—need transparency and predictability from ODF to fully understand, plan for, and evaluate policy decisions and their economic impacts. These groups are not merely stakeholders, but essential partners in achieving the state's objectives for its forests. We look forward to continued engagement and meaningful participation in the adaptive management process as it moves forward.

Sincerely,

Laura Wilkeson
Oregon Director of Government Affairs

TO: Interim State Forester Kate Skinner
FROM: Conservation Organizations including the State Forest Coalition
RE: Comments on the Draft Western Oregon State Forests Management Plan
DATE: January 30, 2026

Dear Interim State Forester Skinner,

Please accept these comments into the record for rulemaking on the Draft Western Oregon State Forests Management Plan (FMP), submitted by the State Forest Coalition member organizations and its partner groups signed below. Our organizations' members recreate on state forest lands, attend Board of Forestry meetings, comment on state forest policy issues and communicate with elected and appointed officials on issues affecting the management of Western Oregon state forests.

Our organizations support restoring balance to state forest management by improving water quality, restoring aquatic and terrestrial ecosystems and older mature forest structure, and increasing carbon storage on state forests. We support changing the revenue structure and diversifying funding to the Department of Forestry and the counties to ease pressure to unsustainably harvest wood products on state forests. We support the Habitat Conservation Plan (HCP) for Western Oregon state forests with increased protections for streams and old forest species, guided by the best available science and implemented consistently with statutory and other legal mandates. Our groups support applying ecological forest management principles and practices across state forests.

We support the full implementation, and inclusion in the FMP, of the Board of Forestry-adopted Climate Change and Carbon Plan (Climate Plan). We support the Governor's Executive Order 25-26, which calls on the Oregon Department of Forestry to lead by example on state forests by accelerating climate actions and setting aside an additional 10% of state forest lands for protection using 2025 as the baseline. This baseline includes the HCP, Climate Plan and other Board-adopted policies either adopted or implemented prior to 2026.

Our organizations also support the adoption of a new Forest Management Plan that is consistent with current FMP requirements to protect and restore 30-50% of the forest in complex layered stand conditions or older forest conditions. We are concerned that replacing this standard with the new FMP will result in further reduction of complex layered stands and suitable habitat for older forest-dependent species. We support a moratorium on harvesting complex layered stands until a minimum of 30% of North Coast forests are in this condition.

General comments

Management of State Forest Lands

ORS 530.050 requires state forests to be managed for the greatest permanent value to the state. OAR 629.035.020 defines greatest permanent value to mean the following:

(1) As provided in ORS 530.050, "greatest permanent value" means healthy, productive, and sustainable forest ecosystems that over time and across the landscape provide a full range of social, economic, and environmental benefits to the people of Oregon. These benefits include, but are not limited to:

(a) Sustainable and predictable production of forest products that generate revenues for the benefit of the state, counties, and local taxing districts;
(b) Properly functioning aquatic habitats for salmonids, and other native fish and aquatic life;
(c) Habitats for native wildlife;
(d) Productive soil, and clean air and water;
(e) Protection against floods and erosion; and
(f) Recreation.

"Healthy productive and sustainable forest ecosystems" are required to be maintained over time and across the landscape to provide the full range of benefits to all Oregonians. There is no authority to segment state forests to manage areas solely for industrial-scale timber harvest at the expense of aquatic habitat, habitat for wildlife, safe drinking water, recreation opportunities or other values. State forests are required to be managed to achieve the full range of benefits listed above across the landscape without sacrifice zones managed exclusively for large-scale clearcut timber harvest.

The FMP is ostensibly based on ecological forest management. There are references to this approach throughout. Yet there are no substantive goals or strategies to implement ecological forest management. Ecological forest management maintains the full array of ecosystem structures and biota on a large scale. It relies on long rotations with smaller-scale variable retention harvests, retention of biological legacies, more legacy tree retention and numerous variable density thinning treatments that seek to emulate natural disturbances.[1] It minimizes the use of pesticides.[2] These elements of ecological forest management must be included in the goals and strategies of the FMP in a way that is measurable.

> **Recommendation**: Add a principle, goals and strategies requiring the implementation of ecological forest management across time and throughout the landscape. Include performance measures and timelines to evaluate progress in implementing ecological forest management practices. Include goals, strategies and a timeline that achieve:
>
> - the full array of ecosystem structures;

[1] Franklin, Johnson, Johnson *Ecological Forest Management* (Waveland Press, 2018) 7-10.
[2] Franklin, Johnson, *Contrasts Between Ecological and Production Forestry,* 2013

- retention of ecosystem components;
- stand-level structural diversity and complexity;
- minimization of the use of pesticides;
- reliance on long rotations with smaller-scale variable retention harvests;
- increased retention of biological legacies and more legacy tree retention, and
- variable density thinning treatments that seek to emulate natural disturbances.

The Oregon Court of Appeals ruled in Linn Co. v. Oregon that the state is under no contractual obligation to maximize timber revenue for the benefit of the counties. In fact, there are a broad range of values provided to the state, and to the counties, where state forest lands are located. These include timber harvest and revenue, but also clean air, safe drinking water, fish and wildlife habitat, biodiversity, carbon capture and storage, hiking, foraging, wildlife viewing and other values and benefits available to the public from intact forests.

The management of state forests must ensure "sustainable timber harvest," consistent with the other elements of GPV, meaning the maintenance of forest ecosystem structure, composition and functional integrity.[3] This includes emulating natural disturbances with silvicultural practices, using variable retention harvest instead of clearcutting, ensuring the long-term health of the entire ecosystem and the use of site-specific prescriptions allowing for responsible timber harvest that maintains ecological resilience to climate change.

The ODF staff have proposed several performance measures for the FMP, including a timber harvest performance measure, and recommendations that would depart from even flow and accelerate timber harvest for the next decade in a manner that is unsustainable. This proposed performance measure is inconsistent with numerous requirements of state law, including the prohibition of the Board of Forestry from setting timber harvest levels, the requirement to ensure sustainable timber harvest, and the requirements of 629.035.020 and 030.

As drafted, the FMP fails to ensure consistency with the requirements of ORS 530.050 and OAR 629.035.020 and must be revised. It fails to ensure ecological integrity, and healthy productive and sustainable forest ecosystems over time and across the landscape. It does not ensure sustainable timber harvest and seeks to unlawfully segment state forests into different management zones in a manner that is inconsistent with GPV.

> **Recommendation:** Eliminate the timber harvest level performance measure. Add principles, goals, strategies and performance measures requiring ecological forest management and including, but not limited to, the elements outlined above.

Forest Management Planning

OAR 629.035.030 describes mandatory requirements of forest management plans.

[3] Franklin, Johnson, Johnson, *Ecological Forest Management* 7-10.

(1) Forest management plans are required to implement “Greatest Permanent Value” requirements based on the best available science.

> **Comment:** The plan is so lacking in specific goals and strategies that it is difficult to determine whether it is consistent with GVP or based on the best available science. The FMP is required to demonstrate the best available science upon which the goals and strategies are based. The FMP should follow the SMART goal-setting model by having goals that are specific, measurable, achievable, relevant and timebound. Instead, the draft FMP is impermissibly vague and lacking in specificity and accountability measures. The lack of specificity gives the ODF wide latitude in forest management decisions that is inconsistent with the requirements of OAR 629.035.020 and 030.
>
> **Recommendation:** Revise the goals and strategies following the SMART goal-setting model.

(2) Forest Management Plans must contain the following elements:

(a) Guiding principles that include legal mandates and Board of Forestry policies. Taken together, these principles shall guide development of the management plan.

> **Comment:** The guiding principles do not include all legal mandates and Board policies. These include the Climate Change and Carbon Plan, the Vision for Oregon Forests and Executive Order 25-26 requiring measures to increase carbon sequestration and protect an additional 10% of state forest lands in the next ten years, based on a 2025 baseline.
>
> **Recommendation:** Include specific references to the Climate Change and Carbon Plan, Vision for Oregon Forests and Executive Order 25-26.

(b) Description and assessment of the resources on state forest lands within the planning area and consideration of the surrounding ownership in order to provide a landscape context. The description and assessment includes general statements of the current conditions of each of the resources, and the laws, policies, and programs that affect the resources and their management.

> **Comment**: The draft FMP does not take into account surrounding ownerships to provide a landscape context. Rather, it vaguely describes state forest ownerships in isolation. For example, the Clatsop State Forest is surrounded by large industrial ownerships managed on short rotations with far less protections for water resources and fish and wildlife habitat. These large industrial ownerships pay very little in local taxes, which places an undue burden on state forests to provide revenue for county services.

Recommendation: The FMP must evaluate management practices, taxation and local revenue generated on adjoining and nearby ownerships and assess the impacts on resources on state forest land.

(c) Forest resource management goals, which are statements of what the State Forester intends to achieve for each forest resource within the planning area consistent with OAR 629-035-0020 (Greatest Permanent Value).

(d) Management strategies, which describe how the State Forester will manage the forest resources in the planning area to achieve the goals articulated in the plan. The strategies shall identify management techniques the State Forester may use to achieve the goals of the plan during the implementation phase of the plan.

Comment: As stated above, the draft FMP does not comply with rules requiring goals and strategies that describe how the State Forester will manage forest resources to achieve the goals articulated in the plan. The goals are so high level that they lack articulation, clarity, and distinction. The draft FMP is more of a vision document for state forests than a management plan. The strategies fail to identify management techniques with sufficient specificity to determine compliance with laws and policies. Instead, ODF attempts to keep specific goals and strategies outside of the rulemaking framework, within performance measures, implementation plans and annual operations plans, where accountability cannot be assured.

Recommendation: Revise goals and strategies following the SMART goal-setting model. Describe how the goals and strategies comply with all legal and policy requirements. Include performance measures in the FMP to describe strategies for implementing the plan's goals with sufficient specificity to determine compliance with existing statutes, rules and policies.

(f) General guidelines for implementation, monitoring, research, and adaptive management. The guidelines shall describe:

(A) The process for implementing Forest Management Plans;
(B) The approach for determining whether the strategies are meeting the goals of the Forest Management Plans; and
(C) The process for determining the validity of the assumptions used in developing the strategies.

Comment: Section 4.2 of the draft FMP describes implementation guidelines. It states, "Land managers are tasked with considering all of the goals and strategies, identifying and addressing trade-offs, and meeting GPV when implementing the FMP." However, the rules in OAR 629.035.030 do not allow for "considering" goals and strategies and "addressing trade-offs." The goals and strategies are mandatory and all must be met.

For example, in **OAR 629.035.030 (3)**, the FMP is *required* to include specific strategies that *shall*: (Emphasis added)

- Include strategies that provide for actively managing forest land in the planning area.
- Contribute to biological diversity of forest stand types and structures at the landscape level and over time through application of silvicultural techniques that provide a variety of forest conditions and resources; and through conserving and maintaining genetic diversity of forest tree species.
- Manage forest conditions to result in a high probability of maintaining and restoring properly functioning aquatic habitats for salmonids, and other native fish and aquatic life, and protecting, maintaining, and enhancing native wildlife habitats, recognizing that forests are dynamic and that the quantity and quality of habitats for species will change geographically and over time.
- Provide for healthy forests by managing forest insects and diseases through an integrated pest management approach; and utilizing appropriate genetic sources of forest tree seed and tree species in regeneration programs.
- Maintain or enhance long-term forest soil productivity.
- Comply with all applicable provisions of ORS 496.171 concerning state and federally listed threatened and endangered species.
- The plans shall include strategies that maintain and enhance forest productivity by:
    - Producing sustainable levels of timber consistent with protecting, maintaining, and enhancing other forest resources.
    - Applying management practices to enhance timber yield and value, while contributing to the development of a diversity of habitats for maintaining salmonids and other native fish and wildlife species.
    - The plans shall include strategies that utilize the best scientific information available to guide forest resource management actions and decisions by:
        - Using monitoring and research to generate and utilize new information as it becomes available.
        - Employing an adaptive management approach to ensure that the best available knowledge is acquired and used efficiently and effectively in forest resource management programs.

Recommendation: Amend the draft FMP to explicitly require compliance with all of OAR 629.035.020 and 030. Delete language that unlawfully introduces discretion where the rules do not allow it. Delete the term “trade-offs” from Section 4.2.

Chapter 1: Purpose and Scope

1.1.1 Guiding Principles. Page 1.2

Comment: The FMP is required by rule in OAR 629.035.030(1) to be based on the best available science; however, the draft FMP lacks a principle requiring science-based goals and strategies. There needs to be a principle requiring the FMP to be based on the best science available (OAR 629.035.020) and its implementation based on the best science available (OAR 629.035.020(3)(d). Science does not merely inform policy decisions, it is the foundation for all goals, strategies, policies and implementation measures on state forest land. The Board of Forestry and the ODF do not have the discretion to vary from the best available science. Where there are gaps, the State Forester is required to base decisions on GPV and rules applying to forest management planning.

Recommendation: Add a new principle: The FMP and all its implementation measures shall be based upon and consistent with the best available science and include descriptions of the scientific basis for the plan's goals, strategies and implementation measures.

Principle 1— Greatest Permanent Value (GPV) (Page 1.2): The FMP will be grounded in the management mandates for Board of Forestry Lands (BOFL) as expressed in the GPV and Forest Management Planning OARs.

Comment: We generally support this principle; however, the draft FMP's goals and strategies are so vague that it is impossible to determine compliance with GPV and the forest management planning administrative rules.

Principle 2 — Biological Diversity: State forest lands will be managed, conserved, and restored to provide overall biological diversity of state forest lands, including the variety of habitats for native fish and wildlife and accompanying ecological processes. The GPV and Forest Management Planning rules are the BOF's expression of providing conservation.

Comment: We support this principle; however, the goals and strategies are insufficient to ensure conservation and restoration of biodiversity on a "landscape level and over time." (OAR 629.030(3)(b)(A))

Principle 3 — Revenue (Page 1-4): The FMP will provide sufficient revenue to ensure ODF's ability to manage, conserve, and invest in the forest in order to provide GPV. The FMP will provide sufficient revenue to support the stewardship of these forest lands and achieve the blend of economic, social, and environmental benefits. Financial viability is achieved over the long term through continued protection and management of the forest asset, and it is achieved over the short term with operational tools that ensure cash flow is available to ODF for sound management of state forest lands.

Comment: State forests have not provided sufficient revenue for several years and require general fund investments. Similar language in the current FMP was used in the Jewell lawsuit and this principle as drafted will certainly lead to more litigation.

Recommendation: Delete this principle, or delete “sufficient” and “ensure ODF’s ability.” In the second sentence, delete the word “sufficient.” Delete the third sentence entirely.

Principle 4 — Social Benefits: The FMP will provide for a range of social benefits for all Oregonians, including direct and indirect financial contributions to local and state governments, opportunities for public access and recreational use, support for diverse local employment opportunities, and the inclusion of Oregonians and their broad range of perspectives.

Comment: Principle 4 is missing several social benefits, including safe drinking water, overall water quality and improved stream flows and temperatures, and reduction or avoidance of erosion and landslide risks. Safe drinking water, clean air, and clean water have enormous economic, social and environmental benefits.

Recommendation: Add, “safe drinking water, overall air and water quality, reduction of erosion and landslides, and improved stream flows and temperatures” to Principle 4.

Principle 5 — Forest and Watershed Restoration: FMP will recognize that investments in forest and watershed restoration are necessary to achieve desired outcomes that align with the GPV policy direction for the BOF.

Comment: This principle is passive and doesn’t demonstrate an active role in strategic restoration planning and prioritization of restoration goals. This should be a core function of ODF management of state forests.

Recommendation: Add the following sentence to Principle 5, **“**The FMP will require forest and watershed restoration by developing a strategic plan to prioritize and implement restoration projects consistent with GPV.”

Principle 6 — Pace and Scale (Page 1-4): The FMP will be developed and implemented on a scale and at a pace that provide a geographic and temporal range of economic, social, and environmental benefits. The geographic scale of plan strategy and implementation will have an effect on the spatial distribution of plan outcomes. Likewise, the temporal pace of strategy implementation and investments will have an effect on the distribution of environmental, social, and economic outcomes over time. These dynamics will be considered in creating and implementing a plan that provides a range of benefits across space and time. The FMP will not individually optimize environmental, social, or economic outcomes at each geographic scale or for every time period but will strive for a geographical and temporal blend of environmental, social, and economic outcomes.

Comment: ORS 530.050 and OAR 629.035.020 require state forests to be managed across the landscape for “greatest permanent value” both temporally and spatially. The statute and rule do not allow for management of state forests to be segmented for a net effect approach, managing parts of the forest for GPV and other parts for only timber

production. GPV applies continually over time and across the landscape. There is no authority to allow short-term trade-offs that vary from ORS 530.050. Board of Forestry lands are required to be managed for greatest permanent value over time and across the landscape.

OAR 629.035.020 (1) As provided in ORS 530.050, “greatest permanent value” means healthy, productive, and sustainable forest ecosystems that **over time and across the landscape** provide a full range of social, economic, and environmental benefits to the people of Oregon. (Emphasis added)

Ecological forest management must be applied consistently, ensuring clean water, fish and wildlife habitat, structural diversity, biodiversity and other values, thus ensuring a range of benefits geographically and temporally.

A good definition of ecological forestry can be found in the 2018 textbook by Jerry Franklin, Norman Johnson, and Debora Johnson, ***Ecological Forest Management****.* “Ecological forestry recognizes that forests are ecosystems with diverse biota, complex structure, and multiple functions, and not simply collections of trees valuable primarily for production of wood. In doing so, it seeks to maintain the fundamental capacities (integrity) of the forest ecosystems to which it is applied.”

Recommendation: Delete Principle 6. Replace it with a new principle requiring state forests to be managed across the landscape and over time based upon the principles of ecological forest management stated above.

Principle 7 —Varying Levels of Outcomes (1-6)**:** The FMP will provide varying levels of social, economic, and environmental outcomes over time as fiscal conditions change. While this approach will result in short-term trade-offs among specific goals, over the long term, GPV will be achieved.

Comment: There is no authority to allow short-term trade-offs that vary from ORS 530.050. Board of Forestry lands are required to be managed for greatest permanent value over time and across the landscape.

OAR 629.035.020 (1) As provided in ORS 530.050, “greatest permanent value” means healthy, productive, and sustainable forest ecosystems that **over time and across the landscape** provide a full range of social, economic, and environmental benefits to the people of Oregon. (Emphasis added)

Recommendation: Replace draft Principle 7 with the following:

New Principle 7: The FMP will provide consistent levels of social, economic and environmental outcomes over time and across the landscape, in accordance with ORS 530.050 and OAR 629.035.020.

Principle 8—Legal and Regulatory Compliance: In addition to the management mandates specific to state forest lands, the FMP will address compliance with other state and federal laws and rules including, but not limited to, the state and federal Endangered Species Acts (ESAs), the federal Clean Water Act, the Oregon Forest Practices Act (FPA), Oregon fish passage laws, and cultural resource protection administered by the State Historic Preservation Office and coordinated with Tribal Nations (also known as Tribal Partners) and the Oregon State Police.

> **Comment:** The FMP must also comply with all plans, policies and performance measures adopted by the Oregon Board of Forestry, key performance measures adopted by the state legislature, and executive orders issued by the governor. Amending Principle 8 to include these elements is necessary due to the ODF's history of noncompliance with rules, such as the FMP, policies including the Climate Change and Carbon Plan, and legislatively approved key performance measures.
>
> **Recommendation:** Add the following sentence: FMP and its implementation measures shall comply with all plans, policies and performance measures adopted by the Oregon Board of Forestry, key performance measures adopted by the state legislature, and executive orders issued by the governor.

Principle 12 — Managing for Climate Change (Page 1-7): The FMP will be implemented to adapt to climate change and mitigate its impacts on the management of state forest lands. The FMP will also contribute to climate change mitigation and sequester carbon. Temperature, precipitation, other climate variables, and hydrologic processes are changing, and are likely to alter the frequency and severity of disturbances, including insect eruptions, disease, wildfire, and drought. These disturbances are likely to have a disproportionate effect on marginalized communities. Within the context of ODF's adaptive management process, the FMP will contain forest management strategies intended to maintain and restore ecological processes and functional characteristics that promote resilient forest conditions. Forest stands and wood products derived from active management contribute to carbon sequestration, a factor in mitigating global climate change. A focus on strategies that adapt to climate change will increase the probability that ODF is able to provide GPV over the long term.

> **Comment:** Like much of the draft FMP, Principle 12 has little substance. Lacking in specificity, it essentially means that the ODF intends to proceed with business as usual, without taking any additional measures to respond to the climate crisis. This principle lacks mention of the Climate Change and Carbon Plan. It also lacks inclusion of a carbon market system, even though ORS 530.050(12) authorizes the state forester to establish a carbon credit system.
>
> **Recommendation**: Amend Principle 12 as follows: The FMP shall ~~be~~ implement~~ed to~~ **the Climate Change and Carbon Plan** and establish a carbon market system consistent with ORS 530.050(12).

Comment: Draft Principle 12 inappropriately characterizes the impacts of climate change as a possible future threat to marginalized communities.[4] Frontline communities are already experiencing the first and worst impacts of the climate crisis. Vulnerable communities are more likely to be exposed to severe weather like wildfire smoke, heat, or flooding, or lack affordable, quality housing. These impacts are documented and the FMP should reflect that reality.

Recommendation: Delete "are likely to" from the sentence "These disturbances are likely to have a disproportionate effect on marginalized communities."

Comment: The principle refers to the carbon sequestration of wood products as a climate change mitigation factor. The FMP should not overestimate the impact of carbon storage in wood products. Mature and old forests store more carbon in trees and soil than young forests, and continue to accumulate it over decades to centuries,[5] making them the most effective forest-related climate mitigation strategy. Converting mature and older forests to younger forests results in a significant loss of total carbon stores, even when wood products are considered.[6] The ability of wood products to store carbon long-term is often overestimated, especially in the U.S., and susceptible to economic market shifts.[7] Emissions reductions and older forests are proven natural climate solutions; carbon storage in wood products is not.

Recommendation: Add language clarifying the minimal and uncertain impact wood products have on long-term carbon storage. Add language acknowledging emissions reductions and conservation of mature and old-growth forests as the most effective solutions for long-term carbon storage and sequestration.

Recommendation: Add a new principle addressing aquatic and wildlife habitats.

New Principle: Properly functioning aquatic and wildlife habitats: The FMP shall include specific goals and strategies that "manage forest conditions to result in a high probability of maintaining and restoring properly functioning aquatic habitats for salmonids, and other native fish and aquatic life, and protecting, maintaining, and

[7] University of Wisconsin-Madison. "Wood products mitigate less than one percent of global carbon emissions." ScienceDaily. ScienceDaily, 2 July 2019. https://www.pnas.org/doi/full/10.1073/pnas.1904231116.

enhancing native wildlife habitats, recognizing that forests are dynamic and that the quantity and quality of habitats for species will change geographically and over time." OAR 629-035-0030 (30(b)(B).

Chapter 3: Forest Resources

3.1 Forest Condition

Page 3-3, Distribution of Stand Ages as a Percentage of Western Oregon State Forests

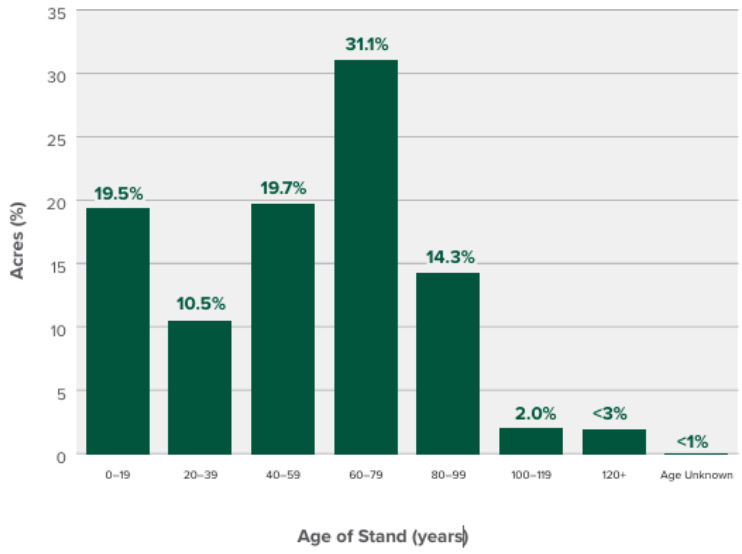
Compared to simple stands, forests with complex stands will support more biodiversity and will be more resilient to windfall and insect infestations.

FIGURE 3-1

Distribution of Stand Ages as a Percentage of Western Oregon State Forests

Compared to even-aged stands, forests with uneven-aged stands often support a greater number of species and are more resistant to windfall and insect outbreaks.

SOURCE: ODF 2022A



Comment: According to Figure 3-1, page 3-3, less than 6% of state forests are 100 years old or older. Less than 3% of state forests are greater than 120 years in age. State forests are predominantly composed of trees under 80 years old. The lack of older forests has a detrimental effect on mature forest-dependent species, water temperature and stream flows, and ultimately for human health[8].

Recommendation: Retain all trees 100 years old or older.

[8] Gilhen-Baker et al. 2022. Old growth forests and large old trees as critical organisms connecting ecosystem and human health. A review. Environmental Chem Lett. 20(2): 1529-1538. doi: 10.1007/s10311-021-01372-y

Comment: The 2010 FMP called for 30-50% of North Coast forests to be in complex layered condition or older forest structure. Fifteen years later, the acreage of forest stands in this condition decreased to 11.75%. The ODF claims that this requirement is not time-bound, therefore it does not have to make progress toward this goal. The legislatively approved Key Performance Measure 10 requires a minimum of 30% of the forest to be in complex layered condition. ODF staff claim that KPMs are not binding and they do not have to follow them. (personal communication: Ron Zilli, Deputy Chief State Forests, 2024)

Recommendation 1: Include a strategy in the FMP requiring a moratorium on the harvest of existing complex layered stands.

Recommendation 2: Develop a strategy and 10-year timeline for 30% of stands to be in complex layered condition. Consider using suitable habitat, such as nesting, roosting and foraging habitat for northern spotted owls and marbled murrelets as a surrogate for complex layered forest stands.

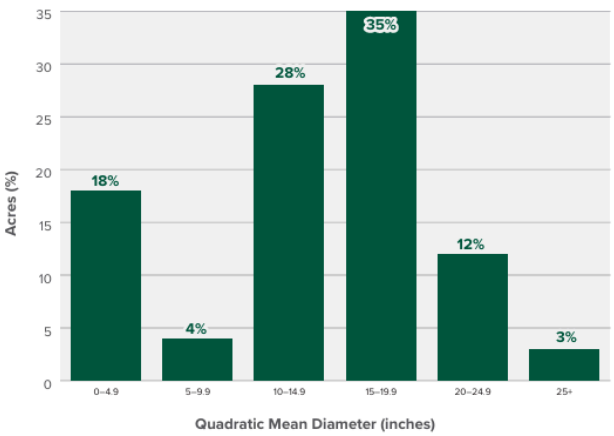
Page 3.4: A relatively small fraction of trees in the planning area have a quadratic mean diameter of more than 20 inches, reflecting the history of fire, regeneration harvesting, and reforestation on state forest lands. Silvicultural prescriptions may help accelerate radial growth in trees and may help achieve silvicultural and habitat management goals for average tree diameter.

FIGURE 3-3

Distribution of Quadratic Mean Diameter of Trees in Western Oregon State Forests

Quadratic mean diameter affects the quality of habitat for some wildlife species and tree bole merchantability.

SOURCE: ODF 2022A



Comment: Only 3% of state forests have stands that are 25 inches in diameter or greater.

Recommendation: To develop old forest structure for species dependent on this structure, retain all trees 25 inches in diameter or greater.

3.1.3 Forest Resilience (Page 3.11) Through activities on the forest (management and conservation), the overarching goal is to ensure healthy, sustainable, and resilient forest ecosystems that over time help achieve environmental, social, and economic goals that benefit all Oregonians. Functioning ecosystems on state forest lands provide a variety of benefits including clean water, recreation, wildlife habitat, timber, and other ecosystem services.

The health of these forests is defined in this FMP as their ability to increase or maintain productivity while maintaining resistance and resilience to biotic and abiotic stressors.

Comment: Functioning ecosystems and forest health require reduction of large-scale clearcutting and increased reliance on selective harvest, partial cuts and patch cuts.

Recommendation: Add a strategy to ensure functioning ecosystems and forest health across the landscape by reducing reliance on regeneration harvests (clearcuts). Protect older stands and trees. Retain trees with large diameters. Use small patch cuts and partial harvests with variable-density retention. Retain a minimum of 15% of older trees per harvest unit in undisturbed patches, independent of buffer requirements.[9]

3.1.4: Disturbance response (Page 3-13)

Salvaging can be employed to remove merchantable timber from disturbed areas, prevent the spread of disease or insect infestation, reduce safety hazards, and promote forest health for future harvest, while considering potential negative impacts (Lindenmayer et al. 2012). Responding to disturbance and managing state forest lands in accordance with the resource goals of a particular area, promotes sustainable ecological silviculture and the continuation and enhancement of ecosystem services.

Comment: Salvage logging can also have detrimental effects, including soil disturbance, erosion and elimination of habitat, especially for fire-dependent species. (Lindenmayer and Ross 2006)[10] Retention of the oldest trees, downed logs and snags provides habitat, soil recovery and reduced erosion. Salvage logging should be prohibited in HCAs and RCAs and on steep erosion-prone slopes.

Recommendation: Prohibit salvage logging in HCAs and RCAs. Avoid steep erosion-prone slopes. Retain trees that are not dead or dying, downed logs and snags for habitat, soil recovery and erosion prevention.

---

3.2.1 Timber Management

Goal Timber Production (Page 3-14)

Goal: Provide a sustainable and predictable supply of timber that provides for economic opportunity, jobs, and availability of forest products.

Strategy—Sustainable Harvest Objective
Determine a sustainable harvest objective during IP development, and complete this harvest objective with predictable year-to-year timber supply over the life of the IP.

> **Comment:** As stated in the general comments above, the management of state forest must ensure "sustainable timber harvest", consistent with the other elements of GPV, meaning the maintenance of forest ecosystem structure, composition and functional integrity. This includes emulating natural disturbances with silvicultural practices, using variable retention harvest instead of clearcutting, ensuring the long-term health of the entire ecosystem and the use of site-specific prescriptions allowing for responsible timber harvest that maintains ecological resilience to climate change.
>
> The performance measures for the FMP proposed by ODF staff include a timber harvest performance measure and recommendations that would depart from even flow and accelerate timber harvest for the next decade in a manner that is clearly unsustainable. This proposed performance measure is inconsistent with requirements of state law, including the prohibition of the Board of Forestry from setting timber harvest levels, the requirement to ensure sustainable timber harvest, and the requirements of OAR 629.035.020 and 030.
>
> **Recommendation 1:** Amend the Timber Harvest Objective strategy by adding the following language in bold:
>
> Determine a sustainable harvest objective during IP development **that is consistent with the principles of ecological forest management, the Climate Change and Carbon Plan, and the requirements of OAR 629.035.020-030** and complete this harvest objective with predictable year-to-year timber supply over the life of the IP.
>
> **Recommendation 2:** Eliminate the timber harvest level performance measure.

Strategy—Timber Salvage (Page 3-15)
Implement a timely response to natural disturbances (fires, windstorms, ice storms, etc.) to salvage merchantable timber, based on the management emphasis of the affected areas and operational policy.

Comment: Salvage logging can also have detrimental effects, including soil disturbance, erosion and elimination of habitat, especially for fire-dependent species.[11] Retention of the oldest trees, downed logs and snags provides habitat, soil recovery and reduced erosion. Salvage logging should be prohibited in HCAs and RCAs and on steep erosion-prone slopes.

Recommendation: Prohibit salvage logging in HCAs and RCAs. Avoid steep erosion-prone slopes. Retain the largest healthy trees, downed logs and snags for habitat, soil recovery and erosion prevention.

Strategy—Silviculture Practices for Stand Management and Development

Within HCAs and RCAs, opportunities to increase adaptive capacity through silvicultural activities are more limited than they are for General Stewardship lands. However, certain conservation actions to promote habitat enhancement will provide specific points to promote resiliency and resistance or to observe transformation**.**

Management of HCAs will incorporate principles of ecological silviculture, which seeks to emulate stand initiation and development processes that result from small-scale natural disturbances (e.g., windthrow, lightning, insects, disease) to promote within-stand diversity and complexity and late seral stands.

A proportion of HCAs that are stunted due to SNC cast will be managed early in the permit term, which will retain unaffected conifers and hardwoods, and will be replanted with habitat-suitable species mixtures. The majority of treatments to reduce fire, insect, and disease risk will occur in stands outside of the HCAs.

Comments: HCAs include a mix of stand conditions, including a significant acreage of nonhabitat for covered species.

Recommendations: Include the following strategies:

1. The sole priority for managing HCAs must be the protection and restoration of suitable habitat for covered species.
2. Harvest within HCAs must be strictly for the purpose of habitat enhancement consistent with the terms of the HCP.
3. Sustainable harvest objectives must be consistent with all Board and legislatively approved plans, policies, rules, statutes and performance measures, including KPMs.
4. No harvest, including salvage, is allowed in RCAs.
5. Management in HCAs must avoid clear-cut harvest, and retain all trees that are not significantly affected by SNC and prohibit salvage logging.

[11] Lindenmayer, D.B. and R.F. Noss. 2006. Salvage logging, ecosystem processes, and biodiversity Conservation. Conservation Biology https://doi.org/10.1111/j.1523-1739.2006.00497.x Digital Object Identifier (DOI)

3.2.2: Transportation

The road system is an integral part of achieving GPV. The road system supports economic benefits by facilitating timber and special forest product harvest and firefighting, which protects the timber resource.

Roads provide access for a wide range of social benefits such as recreation and cultural activities and firefighting to protect public safety.

There are approximately 4,300 miles of road on state forest lands with 88% of all acres located within 0.25 mile of a road. Approximately 83% of the roads are surfaced. The road system has the potential to adversely impact natural resources, particularly water quality and aquatic species migration.

The road system on state forest lands is managed to protect resources in accordance with the HCP, ODF guidance, best management practices (BMPs), Oregon Forest Practices Act (FPA), and other applicable laws.

> **Comment:** Western Oregon state forests have 4,300 miles of roads, equivalent to the road miles between Alaska and Miami, Florida. While this section touts the importance of roads to fulfilling GPV, it fails to mention that the state forest road system harms resources protected by state and federal law. Forest roads may result in erosion[12], slope failure, siltation of spawning habitat, obstructions to salmon habitat, habitat fragmentation, spreading invasive species, and increased risk of human-caused wildfires.[13] Nowhere in this section is there any reference to road removal to support GPV and protect and enhance fish and wildlife habitat.
>
> **Recommendations:** Add a strategy to decommission roads based on steep slopes, likelihood of erosion, slope failure and adverse impacts to sensitive resources. Identify opportunities to consolidate road access. Develop a strategy and priorities to improve fish passage on existing roads. Decommission roads within HCAs and RCAs and include a schedule and timeline for road decommissioning.

3.2.7: Recreation Education, Interpretation - Page 3-23

> **Comment:** The FMP does not include a reference to the Recreation Strategic Plan (2023-2026) or its priorities, which include the following:

[12] McCaffery, Switalski, Eby. Effects of Road Decommissioning on Stream Habitat Characteristics in the South Fork Flathead River, Montana. *Transactions of the American Fisheries Society.* Volume 136, Issue 3, May 2007, Pages 553–561

[13] Morrison, P.H. 2007. Roads and Wildfires. Pacific Biodiversity Institute, Winthrop, Washington. 40 p.

Short-term priorities Page 18 (REI Strategic Plan): Develop a short-term Recreation Operations Plan. Complete an integrated Recreation Master Plan. Develop an Interpretive Master Plan and revise education and interpretation programs and services at the Tillamook Forest Center to reflect new state forest policy changes. Develop a Tillamook Forest Center Facilities Maintenance Plan. Complete a Community Engagement Plan that aligns with State Forests Trust of Oregon's donor relations strategies. Develop a long-term staffing plan to address emerging staffing needs identified in the Integrated Recreation Master Plan, and the Interpretive Master Plan. Complete a Volunteer Management Plan. Complete a pilot visitor use monitoring project at the Black Rock Mountain Biking Area.

The REI strategic plan, which expires in 2026, has not been implemented.

Recommendation: Reference the existing REI Strategic Plan. Add a strategy to implement this plan and its priorities. Add a strategy to update the existing plan and require future implementation of its priorities.

Comment: The FMP should contain a strategy to avoid or reduce conflicts from other uses, such as timber harvest and road building, on recreation resources. For example, the location of timber sales, their boundaries and the timing of harvest should avoid adversely affecting recreation resources. Retaining protective buffers along established recreation trails and sites can mitigate the impacts to recreation resources.

Recommendation: Add a strategy to avoid or mitigate adverse effects to recreation resources caused by other uses, such as road-building and timber harvest.

3.2.8 Visual Resources – Page 3-27

Comments: The 2010 FMP defined Scenic Classifications and Management Objectives and required the development of a visual resource management handbook and training manual. The draft FMP fails to mention these at all. The Draft FMP includes one strategy: to implement the Forest Land Management Classification System (FLMCS). After 15 years the ODF should review and update the FLMCS designations as needed, based on landscape changes, changes in use and other factors. The FMP should require a review of the implementation of the objectives, their effectiveness, and make revisions where needed. If the handbook and manual were developed, they should also be reviewed and updated. The FLMCS needs revision to be consistent with ecological forest management and scenic resource protection.

Recommendations: Add strategies requiring review and possible revision of the FLMCS designations, review the implementation and effectiveness of the scenic objectives by qualified experts and update to the handbook and the manual as needed.

3.2.12: Carbon – Page 3-36

Goal: Carbon Storage: Contribute to carbon sequestration and storage on state forest lands and carbon storage in harvested wood products.

> **Comment:** "Contribute to carbon sequestration and storage" is not a quantifiable goal. Consider revising the carbon storage goal to increase carbon sequestration and storage on state forest lands. Develop specific goals and timelines to measure progress. For example, the State Forest Economic Analysis Report compared carbon sequestration ranges between different management scenarios over 150 years. Long rotations increased carbon capture by 81 Million MT as compared to maximizing net present value, an increase of more than 100%. Delete the reference to contributing to carbon storage in harvested wood products.
>
> **Recommendation:** Revise the carbon storage goal as follows, "Increase carbon sequestration and storage on state forest land. Set measurable targets, such as increasing carbon sequestration by at least 100%.

Strategy: Long-term Carbon Storage: Implement silviculture treatments and management actions that improve long-term carbon storage. Evaluate proposed actions with respect to carbon storage relative to baseline state forest land carbon inventory.

In alignment with the CCCP, the intent of this strategy is to consider long-term carbon storage impacts and benefits in the decision process in concert with other goals. Some areas of the forest will see limited or no harvest or timber management, e.g., HCAs, RCAs, and inoperable areas. Forest managers make decisions on silviculture treatments and the timing of harvest to best achieve a suite of goals and objectives.

> **Comment:** The Long Term Carbon Storage strategy lacks appropriate measures to address the climate crisis. It lacks the needed vision and urgency required to address the climate crisis and requires revision. It should reference the EO 25-26. It should include specific goals, timelines and strategies to increase carbon sequestration and storage on state forest lands.
>
> **Recommendations:** Add the following strategies to the FMP:
>
> 1. Include EO 25-26 in the FMP. Accelerate carbon sequestration and storage. Protect an additional 10% of forests in 10 years, focusing on forest stands 90 years old or older with complex layered forest conditions.
> 2. The Climate Change and Carbon Plan is incorporated into the FMP and included as an appendix.
> 3. Inventory carbon and establish targets and timelines for increasing carbon storage on the landscape.
> 4. Use longer rotations that maximize carbon capture and storage.
> 5. Reduce reliance on clearcutting. Use variable density thinning, patch cuts and retention of all older forest structures.

6. Take steps to analyse and establish, if appropriate, a carbon market program.

3.2.14 Aquatic and Riparian Resources Page 3-40

TABLE 3-4

Water Temperature Impairments

Percentages of planning area within watersheds that have temperature impairment indicating waters are warmer than DEQ standards for either part of the year, particularly during spawning of salmonids, or year-round.

SOURCE: DEQ 2022B

District	Percent of Planning Area in Temperature Impaired Watersheds
Astoria	46%
Forest Grove	37%
North Cascade	9%[a]
Tillamook	18%
West Oregon	31%
Western Lane	18%

[a] Water temperature impairment classifications in North Cascade District pre-date the 2020 wildfires.

Comments:

All major salmon-producing streams on the North Coast are impaired – either 303(d) Category 4 or 303(d) Cat. 5 listed for temperature, dissolved oxygen and/or fecal contamination. All of these streams flow from state forest lands.

Integrated Report on Surface Water Quality and 303(d) List of Water Impaired Waters

Nearly ½ of streams in the Astoria District have temperature impairment exceeding DEQ standards, threatening salmon reproduction. The draft FMP recognizes the high percentage of temperature-impaired watersheds in state forests; however, it lacks strategies based on the best available science to restore water quality and stream flows to impaired watersheds. Therefore, the FMP is inconsistent with the best available science and fails to meet the requirements of OAR 629.035.020.

Past forest management activities are likely to be the primary factor affecting water quality, exacerbated by climate change.

Conversion of old growth forests to Douglas fir plantations has a negative effect on stream flows, and increases the effects of climate change.[14] Industrial forestry can result in the reduction of summer streamflows by 25% to 50% compared to mature or old-growth forests.[15] In a study of the effects of timber harvest adjacent to headwater tributaries of the Trask River, researchers determined that forest harvest can have negative impacts on amphibians in areas downstream of harvest units. The direction and

[14] Perry, Jones. Summer streamflow deficits from regenerating Douglas-fir forest in the Pacific Northwest, USA. *Ecohydrology*. 2017;10:e1790

[15] Segura, et al. Long-term effects of forest harvesting on summer low flow deficits in the Coast Range of Oregon. *Journal of Hydrology,* Volume 585, article id. 124749. June 2020.

magnitude of responses varied by species, proximity, and treatment. Stream buffers of 12 meters did not diminish the impacts on stream amphibians.[16]

According to a peer reviewed paper[17] published in 2024 that examined the effects of forestry on stream flows and temperature along the west coast, forestry has strong impacts on peak and low flows and maximum summer water temperatures, though impacts may vary. Forestry elevates stream flows by 20%, reduces low flows by 25% and increases maximum summer temperatures by 15% on average.Harvest method and riparian buffer presence had no detected effects on forestry impacts across studies and statistical models.

Strategy: Aquatic Habitat, "Protect, maintain, and enhance aquatic habitat for aquatic and riparian dependent species.

Comment: This is not a strategy. It's a repetition of the draft FMP goal for Aquatic and Riparian Resources. "Protect, maintain, and enhance aquatic and riparian resources that support the life history needs of aquatic and riparian-dependent fish and wildlife species."

OAR 629-035-0030 3. (b)(B) Forest Management Planning requires "Manage forest conditions to result in a **high probability of maintaining and restoring properly functioning aquatic habitats for salmonids, and other native fish and aquatic life, and protecting, maintaining, and enhancing native wildlife habitats,** recognizing that forests are dynamic and that the quantity and quality of habitats for species will change geographically and over time.

Strategy: Headwater Processes: Maintain and enhance headwater processes that collectively trap and store sediments and organic matter, and export wood, substrate, and food to downstream reaches.

Comment: The Strategy for Headwater Processes is not a strategy. It is a repetition of the Aquatic Resources Goal. It lacks specific measurable timebound actions to maintain and enhance headwater processes and, therefore, is inconsistent with OAR 629.035.030.

Strategy: Threatened and Endangered Species and Other Species of Concern
Protect, maintain, and enhance habitat for threatened and endangered species and other species of concern. The following considerations are used to implement this strategy. Comply with state and federal ESA requirements and adopt management approaches that contribute to

[16] Duarte, et al. Adjacent and downstream effects of forest harvest on the distribution and abundance of larval headwater stream amphibians in the Oregon Coast Range. *Forest Ecology and Management.*Volume 545, 1 October 2023, 121289
[17] Naman, et al. Forestry impacts on stream flows and temperatures: A quantitative synthesis of paired catchment studies across the Pacific salmon range. *AER: Ecological Solutions and Evidence,* Volume 5, Issue 2, April/June 2024

the persistence of threatened and endangered species. Implement the HCP and associated conservation actions targeted to benefit the species covered under the Incidental Take Permit. Conduct species assessments during IP development and related revisions to determine which species warrant special consideration and whether existing conservation measures are adequate.

> **Comment:** The "strategy" for threatened and endangered species only requires the minimum actions necessary to comply with the ESA. Not violating the law can hardly be considered a strategy. The goal and draft strategy should include the long-term survival of the species leading to full recovery.
>
> **Recommendation:** Specifically include the HCP and its conservation actions within the FMP. Ensure sufficient habitat on state forest lands to support species recovery.

Goal: Drinking Water: Protect, maintain, and enhance forest drinking water sources for private and domestic use.

Strategy: Drinking Water Effects Analysis: Develop and incorporate drinking water effects analysis into planning processes to identify and protect drinking water source catchments that overlap with the planning area.

> **Comment:** The requirement for a drinking water effects analysis is needed, but this does not support the goal of protecting, maintaining and enhancing drinking water sources. It lacks strategies and measures that will be implemented to protect and enhance drinking water.
>
> **Recommendations for aquatic and riparian resources:**
>
> **New strategy**: Add a requirement to use the best available science to determine management decisions, including timber harvest, within watersheds with impaired water quality or stream flows.
>
> **New strategy**: Develop forest management and restoration plans and timelines for watersheds with impaired water quality to restore water quality to 303(d) cat.1 status (Not Impaired) consistent with OAR 629-035-0030(3)(b)(B).
>
> **New strategy:** Restore headwater stream functions by requiring minimum 50-foot no-cut buffers for type Np and Ns streams.
>
> **New strategy:** Protect and enhance drinking water sources by eliminating pesticide and herbicide use in drinking watersheds.
>
> **New Strategy:** Protect and enhance drinking water by eliminating clearcut logging practices in drinking watersheds.

3.2.15 Wildlife

GOAL Wildlife Maintain, protect, and enhance functional and resilient landscapes that provide the variety and quality of habitat types and features necessary for long-term persistence of all native wildlife species.

> **Comment:** Several species listed under the ESA as threatened are on the brink of extirpation. The wildlife goal should be amended to include the recovery of threatened or endangered species.
>
> **Recommendation:** Add, "and contribute to the recovery of species listed as threatened or endangered under the state and federal ESAs or listed as species of concern."

Strategy—Threatened and Endangered Wildlife Species and Other Species of Concern Page 3.54.

> **Comment:** This strategy has more specificity than most other strategies in the draft FMP. It includes language to "adopt management approaches that contribute to the survival and *recovery* of threatened and endangered species and species of concern."

Conclusion: The draft FMP is inconsistent with ORS 530.050, OAR 629.035.020 and OAR 629.035.030. It requires significant revision to comply with mandatory rules for forest management planning, including specific goals and strategies that satisfy these requirements.

Subject: Forest Management Plan - Public Comment
Date: Thursday, January 29, 2026 5:53:32 PM

You don't often get email from cascadingrain@gmail.com. Learn why this is important

To whom it may concern,
I would like to submit my public comment in regards to the Forest Management Plan:

We do not need a Forest Management Plan that clear cuts old growth forests and that threatens the success of the Endangered Species Act. Mature forests are disappearing quickly and are an essential tool to combat climate change.

One cannot simply replant an old growth forest. It would take hundreds, even thousands of years for these forests to return to their original state. And it's not as if you can simply replant them since it is incredibly difficult to replicate the biodiversity these forests have naturally formed over their lifetime.

Endangered species are often endangered because they rely on old growth forests specifically. So by clear cutting these forests, you might as well issue them a death sentence.

Please find another way that is less extractive and prioritizes the conservation of these ancient and invaluable ecosystems.

Thank you,
-Kaia Kirkbride
Portland, OR

Subject:	Forest Management Plan (FMP) Public Comment Submission
Date:	Friday, January 23, 2026 3:23:16 PM

You don't often get email from tyler@350pdx.org. Learn why this is important

Dear Chair Kelly and Members of the Board of Forestry,

First, I want to express gratitude for the important work you do of managing our shared, public resources. The completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests was important work to ensure we're protecting threatened and endangered species. I'm writing to ask you to continue the momentum you've built by adopting a new forest management plan for Oregon's state forests that prioritizes conservation, as most Oregonians desire. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change. The time of having plans with no follow-up action or measured success must come to an end. Our survival depends on it.

I shouldn't have to go into great detail to express the magnitude of the climate crisis and how it is upon us. It is not a hypothetical future event. Case in point: Look at the snow levels on Mt. Hood. We must at quickly and decisively if we are to ensure that the young people among us and the generations that come after have a planet that they can survive on. One that was not decimated as a result of our shortsighted, uncreative action.

The HCP will *begin* to restore balance to our state forests after decades of clearcuts and over-harvest, and the FMP must support this momentum, not neutralize it. The remainder of state forest outside of the HCP areas should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes (1) increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and (2) implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by (a) reducing clearcut timber harvest, (b) protecting existing mature stands of forest, © applying ecological forest management practices, and (d) establishing longer rotations between harvest to increase carbon storage.

ODF is currently falling drastically short of its own KPM 10. From your recent report, only 11.75% of North Coast forests have complex structure, and the goal is to preserve 30% (See page 20: https://www.oregon.gov/odf/board/bof/20250903-bof-item-b.pdf). Incremental gains of less than a percentage point per year would indicate that cutting of forests with trees over ~45" dbh should be dramatically reduced, or even paused until the 30% is

achieved. Additionally, at one of the FMP virtual hearings, we were notified by Mike Wilson that KPM 10 will not be continued, at least in its current state. This is alarming and I am holding onto hope that this just means you're reworking it for something even better. But to encourage you on that path, please ensure that there is a measurable performance metric for the amount of complex, mature forests on state lands, and that you actually follow up with it, unlike what has been happening in recent years according to the aforementioned report

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services. *And* this is an unreliable and unsustainable approach that must be fixed. We cannot fund our children' s futures (their education) by cutting down the forests that provide those same futures with clean air, clean water, and habitat for the more-than-human species that our ecosystem would collapse without. Therefore, I also support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding. We shouldn't be caught in an outdated either/or strawman argument of county funding *or* forests. We can, and must, have both.

Now is the time to stand tall for Oregon's state forests and for current and future generations by adopting a strong HCP and a new forest management plan.

Sincerely,

Tyler Gilmore

Subject: Forest Management Plan Amendments
Date: Wednesday, January 21, 2026 2:45:53 PM

You don't often get email from nholmes105@yahoo.com. Learn why this is important

To protect and restore balance to our state forest, the draft Forest Management Plan could be amended in the following ways. Ideas and reasons
for amending the Draft Forest Management Plan are many, with the main conclusion being to preserve our world as best we can as temperature rises to change our climate and damages our forest habitats for mammals, raises the temperature of our streams for our fishes, and the trees of all species
acclimatize themselves as best they can.

The truth is our forests must be cared for thoughtfully. These changes in our temperature, in the insuing dryness cannot be ignored and cannot just mean
a rush to take out the largest trees, the medium trees, or to burn the remaining debris or old trees.

I ask that you consider mitigating climate change and build climate resilience by adding strategies to implement Climate Change and Carbon Plan for our State Forests. This includes shifting to a longer rotation between harvests of trees, please consider reducing large scale clear-cutting, and the subsequent practice of spraying herbicides to reduce so called nuisance plant growth.

Please, consider investigating the practice of climate-smart forestry, now. Optimizing Carbon sequestration, protecting mature and old growth trees. Investigate the practice of growing trees longer and importantly growing a diversity of tree species, their ages and their structures.

Thank you for your consideration of these comments.

Yours truly,

Nancy Holmes

I would like to stress the value of maintaining the 30% of complex maturing forest on state land. Two of the many benefits include water cleaning processes (particularly in adapting to high flow events) and creating habitats more resilient in the face of climate changes. The FMP should be written to support Habitat Conservation Plans and the protections they afford endangered species as well as the many species in community. The funding for management cannot rely solely on logging receipts. That's a tail-wag-the-dog plan that will prioritize monetizing the forest for short-term gain. Science and best practices must direct logging volumes and methods.
Thank you for listening to citizens.

Dear Board,

- **S**tate forests must remain working forests that provide jobs, sustain rural economies and fund local governments and schools.
  Current management already exceeds environmental requirements; additional restrictions are unwarranted, harmful to communities and inconsistent with the balanced mandate of Greatest Permanent Value.
  Active management supports forest health, provides climate-friendly wood products and is essential for ODF to remain financially self-sufficient without burdening taxpayers.

Thank you for taking these things into consideration,
Sincerely,
Mr and Mrs David Silbernagel

You don't often get email from windsof2@aol.com. Learn why this is important

Just say "NO" to anymore cutting of trees (trees are not "timber" unless they were planted in the last 30 years!). As stated below, the ODF led the citizens to believe that 30-50% of our forests were SECURED. It's disgusting that they rolled over to greedy companies and raped our forests. Going forward, the key word is "no!"

Oregon state forests comprise over 600,000 acres of temperate rainforest. The two largest tracts of state forest are the Tillamook and Clatsop on the North Coast. Historically this area provided ample habitat for Northern Spotted Owls and Marbled Murrelets and supported huge runs of salmon.

However, after decades of large-scale clearcuts and overharvest, 17 species including 10 fish species, 3 amphibians as well as coastal marten, red tree vole, Northern Spotted Owl and Marbled Murrelets have been pushed to the brink of local extinction. Mature forests (older than 80 years old) continue to be clearcut despite regulations requiring protection of older legacy forest stands. “Legacy forests” are structurally complex, mature, naturally regenerated forests that have retained traits of the native forests that preceded them.

ODF set a target to retain 30-50% of older forests over a decade ago. Currently less than 14% of mature complex forest is left and continues to be logged. As a result ODF is required to adopt a new Forest Management Plan that is in conformance with the Habitat Conservation Plan (HCP) that the Board of Forestry adopted in 2024. The HCP does represent progress, but it alone won’t result in the recovery of endangered salmon and wildlife populations.

It's time for a strong Forest Management Plan!

Thank you for listening and taking the responsible action,

Dear Department of Forestry,

Protecting water, especially drinking water should be listed as being of the highest value in the Forest management plan. Forest practices should never be allowed to negatively impact clean water.
Large private timber companies are regulated by the Forest Practices Act. Please provide assurance that they are regulated to protect clean water.

Watersheds are all connected and need protection from mobile herbicides used in forestry practices. Imazapyr, Metasulfuron methyl and SMM are commonly used forest management chemicals that move in the environment. The FMP needs to include language minimizing their use and promote the use of alternative practices to protect wildlife and water sources. Helicopter overspray and drift are hurting parts of our coastal native ecosystems.

In this day and age we need to leave a legacy of healthy forest ecosystems to our future generations. Clean air, water and biodiverse forests are beyond monetary value. Do not allow short sighted monetary goals to cloud what is the true value of our natural world.

Sincerely,
Susan Murbach

Hello,

I would like to offer my perspective on the draft forest management plan put forth by the Oregon Department of Forestry.

I urge you to halt clearcutting in Oregon state forests. Many remaining tracts of forest in our state support mature forests. These are not easily replaced, and that should be sufficient reason by itself to maintain them. In addition, preserving mature forests is necessary to create habitat for wildlife. They support complex environments that cannot be found elsewhere. Preserving forests underpins the preservation of other species, as well. Mature forests help preserve and restore watersheds that are necessary for salmon and other fish species to reproduce. Preserving existing forest as is and restoring areas that have been overharvested will also help support the recovery of endangered species such as the northern spotted owl and marbled murrelet.

I am opposed to Principle 3 of the draft Forest Management Plan as it emphasizes logging at the expense of other operations. I support movement toward preserving at least 30% of older forest, but truthfully I feel the target ought to be higher - 50% or more. The plan should complement existing policy direction such as the 2024 Habitat Conservation Plan adopted by the Board of Forestry.

I hope you will consider the above and I hope you will act to save mature forests.

Thank you,

Hi,

I am writing to comment on the draft Forest Management plan and ask that there be no more clearcutting on mature legacy state forests. These forest are crucial habitat for many animals and birds and a key to fighting climate change and there should be policies in place to implement Climate Change and Carbon Plans in state forests. There are endangered specifies that rely on mature forest habitat that is dwindling and these forests and the FMP needs to implement specific strategies to protect these species. I'm also asking that Principle 3 be deleted or amended. Relying on timber harvest revenue to fund forest management will mean a continued reliance on and prioritization of logging.

To Oregon Department of Forestry:

There are many aspects of the Western State Forest Management Plan to be concerned about. We will focus on the Legacy Forests, as after much research, we can see how they must be the key to any forest management plan. The term Legacy Forest was coined by the Legacy Forest Defense Coalition in 2020 to describe any forest that retains significant functional, biological, structural, and genetic legacies of the natural and old growth forests that once dominated the Pacific Northwest. These forests are ecosystems distinguished by old trees and related structural attributes that may include tree size, accumulations of large dead woody material, number of canopy layers (to include vertical and horizontal diversity), species composition, and ecosystem function The particular composition and structure of these forests may not occur again under modern climates and disturbance regimes. With 70% old growth gone, the question is, how do we work toward a future where the loss of old growth isn't just stopped, but actually begins to be reversed?

We need to protect forests that are not yet old-growth but have potential to reach old growth status well with in our life times. Instead of being logged, these forests should be allowed to mature into old growth ecosystems that sequester 1,000 metric tons per acre in the PNW forests of carbon and provide valuable habitats for endangered species. These forests were logged about a century ago and have regenerated into

complex ecosystems that are already beginning to take old growth characteristics. When they were logged there were no chain saws, herbicides or gasoline powered logging trucks. They were logged by hand and a lot was left behind, which allowed legacy forests to grow back with rich diversity of tree and other plant species. These logging conditions will not occur again. We will not get back these complex forests if we log them. We need modern science to drive the decisions. Bulldozing, spraying herbicides and turning legacy forests into tree plantations is not in tune with current scientific research that supports healthy forests and will not build sustainability. If some old growth forests are lost to fires, a diversity of forest types ensures that mature forest will be available to become the next generation of old growth forests.

We need a plan to ensure state forests are managed to provide the greatest permanent value by increasing carbon storage and climate resilience, reducing greenhouse gas emissions from forest product operations and optimizing forest productivity.

The Western State Forest Management Plan revised draft has eight guiding principles. For sake of brevity, we have chosen the following two for comment.
"Principle 1: Greatest Permanent Value" as part of the bill includes economic returns, wildlife habitat, protected water quality, preserve natural forest ecosystems. This will not occur by clearcutting and plantation style reforestation of Legacy Forests. "Principle 7: Varying Levels of Outcome" as part of the bill states, "as fiscal conditions change" the result will be "short

term trade offs among specific goals." The public input has been limited and the time frame to challenge new rules has been greatly reduced. Will there be environmental review? Will ODF bypass the Endangered Species Act and National Historic Preservation Act and the Clean Water Act?

In conclusion, protecting our Legacy Forests from ALL logging is an absolute condition for our Forest Management Plan that will assure a future for healthy state forests that are essential for climate resilience, healthy waterways for salmon and communities, and recovery of threatened and endangered species.

Thank you,
Maxine Schwartz

Dear ODF,

It is a privilege to live in a state with the natural beauty Oregon encompasses. With this privilege comes the responsibility to recognize, protect, and preserve the complex, multifaceted mature forests in this state.

Mature timber and mature forest ecosystems are essential constituents of a livable present and a livable future. The capability of a mature forest to sequester carbon (among a multitude of other benefits) must be recognized and must be given priority over a logging company's yield and profit.

It is your responsibility to ensure *our* forests are adequately and substantively preserved and protected. It is your responsibility to create a plan that adequately protects our current resources and ensures future generations have healthy mature forests. Please - do not fail us.

Do not approve this plan.

To the ODF Staff:

As you know, what draws people to Oregon is often its legendary old growth and abundant forests. Our state "treasures" need to be wisely managed for both living populations and future generations. The current draft of the Forestry Plan does not sufficiently commit to sustainable logging practices, nor does it do enough to pro-actively protect endangered wildlife and flora.

Please make the necessary changes in the draft document to reflect the deeply- held values espoused by Oregonians.

Thank you for your consideration,

Donna Steadman

Justin Butteris
odf.sfcomments@odf.oregon.gov
State Forests Division
2600 State St., Salem, OR 97310

Sent via email:

Dear Mr. Butteris:

Thank you for the opportunity to provide comment on the Draft Final Oregon Department of Forestry Western Management Plan (FMP). The focus of my comments pertain to the need to include more specific references to drinking water and to clarify management strategies to protect drinking water sources from sediment and pesticides. In this context, drinking water sources include all known and unknown sources of drinking water from surface water, springs and wells. A safe and plentiful drinking water supply is perhaps the most critical element of a community's well-being. Consumers should not be forced to pay for damages to water supplies, personal health, and public health in deference to timber company profits.

Please consider modifying the current draft per the following suggestions:

- Figure 1-1 does not list drinking water as a Greatest Permanent Value. It may be one of the most important. Drinking water must be included as a Greatest Permanent Value in Figure1-1 and in the text. This is supported by the Forest Practices Act section 527.710: "...the rules shall provide for the overall maintenance of the following resources: (a)Air quality; (b)Water resources, including but not limited to sources of domestic drinking water."
- Pesticides and/or herbicides are only briefly referenced in the Glossary, with no actual management strategies detailed in the body of the FMP. The risks due to spraying pesticides is not mentioned at all. It is well known that chemicals used by logging companies pose a serious risk to public health. Even those chemicals that bind with soil particles move further down the watershed with the soil during larger rain events. Just observe any stream in an area that was logged in the past few years and it will be deep brown with sediment during a rain event. Detailed management strategies and alternatives are needed to minimize or eliminate those impacts.
- The FMP is heavily focused on maximizing revenue. This needs to be balanced with a narrative regarding the small expense of managing activities to prevent contamination of domestic drinking water sources, versus the enormous costs of remediation or rehabilitation. Even when remedial activities are completed (again, at great cost) the resource is often still compromised.
- One statistic in the draft FMP states: "Less than 1% of Oregon surface water drinking water source areas are located on ODF lands (DEQ 2017)." It is difficult to determine how this statistic was derived. Watersheds are connected

hydrologically via headwaters, streams, rivers, wetlands, and groundwater. This being the case, even municipal wells on the coast are impacted by logging practices upgradient. The FMP must include more realistic data with respect to the number of citizens that are impacted in the geographic area covered by this FMP. An independent statistic reports 25,000 people (or 46%) in Tillamook County receive drinking water from the Tillamook State Forest. In addition, over 70 percent of Oregonians get their drinking water from forested lands.

- The FMP must require ODF to send notifications of any planned activity to all those downstream and downwind in the watershed and request that property owners notify them of their domestic drinking water source location. Once notified, ODF must work with the landowner using best available science to protect the property from harm.
- The draft FMP references the Oregon DEQ and Oregon Health Authority (OHA) as the responsible state agencies to assure drinking water quality is protected. There must be much more specificity as to how that interagency process will be implemented to prevent contamination, and to remediate contamination when it occurs.

Sincerely,

Dick Martindale

Justin Butteris By email: odf.sfcomments@odf.oregon.gov
State Forests Division
2600 State St., Salem, OR 97310

Subject: Formal Comments Regarding the Draft Final Oregon Department of Forestry Western Management Plan

Dear Mr. Butteris:

Thank you for the opportunity to provide comment on the Draft Final Oregon Department of Forestry Western Management Plan (FMP). North Coast Communities for Watershed Protection (NCCWP) strongly believes that safe drinking water and clean air are part of the public trust that we all are entitled to have. There may be no greater importance to individual and public health than the quality of the water we drink and the air we breathe.

The current draft FMP is heavily focused on generating revenue from timber harvests. This is a critical opportunity to include language that will protect all drinking water sources from the sediment and pesticides that enter them due to logging practices. Forestry activities must never negatively impact drinking water sources, personal health and public health. Currently, consumers pay for the treatment of drinking water and health issues due to poor logging practices. Industrial forestry needs to include a process in which consumers can be compensated for these added costs. Prevention is far more economical than remediation with respect to human health and the environment.

Our suggestions are as follows:

1. Figure 1-1 does not list drinking water as a Greatest Permanent Value. It may be one of the most important. Drinking water must be included as a Greatest Permanent Value. This is supported by the Forest Practices Act section 527.710: "…the rules shall provide for the overall maintenance of the following resources: (a)Air quality; (b)Water resources, including but not limited to sources of domestic drinking water."
2. The FMP must include specific language regarding protection of all domestic water sources regardless of type (surface water, spring, shallow well) or registration status. It's a vital public health issue. Water sources must be protected from sediment, diminished quantity and pesticide/herbicide contamination.
3. The FMP must require ODF to send notifications of any planned activity to all those downstream and downwind in the watershed and request that property owners notify them of their domestic drinking water source location. Once notified, ODF must work with the landowner using best available science to protect the property from harm.
4. Pesticides and/or herbicides are only briefly referenced in the Glossary, with no actual

management strategies detailed in the body of the FMP. The risks due to spraying pesticides is not mentioned at all. From page 8 of the Oregon Forest Resources Institute Trees to Tap report summary it is stated "The total number of treatments [pesticide applications] on a seedling plantation ranges from one to four, depending upon the severity of competing vegetation." "While glyphosate (the most used chemical) is less mobile in soil, most of the others commonly used (e.g., Imazapyr, MSM, SMM) are moderately to very mobile in soil." (MSM = Metsulfuron methyl and SMM = Sulfmeturon methyl.) The FMP must include specific language that requires minimized use of pesticides and/or provide alternatives to pesticides to protect drinking water sources and wildlife.

5. United States Environmental Protection Agency and Oregon Department of Environmental Quality (DEQ) studies list 46% of Clatsop County as having "impaired" water quality. Sediment and temperature standards are often in violation. The FMP must be more specific as to how those parameters will be improved.

6. The draft FMP references the Oregon DEQ and Oregon Health Authority (OHA) as the responsible state agencies to assure drinking water quality is protected. There must be much more specificity as to how that interagency process will be implemented to prevent contamination, and to remediate contamination when it occurs.

7. Unfortunately, the draft FMP applies only to the lands managed by the Oregon Department of Forestry and owned by either the Department of State Lands or the Department of Forestry. Private lands, including the enormous privately owned industrial timber properties are regulated by the Oregon Forest Practices Act (FPA). The draft FMP must acknowledge this disparity and provide assurance that these industrial properties are regulated in a manner that is, at a minimum, as protective to drinking sources as those properties covered by the FMP.

8. One statistic in the draft FMP states: “Less than 1% of Oregon surface water drinking water source areas are located on ODF lands (DEQ 2017).” It is difficult to determine how this statistic was derived. Watersheds are connected hydrologically via headwaters, streams, rivers, wetlands, and groundwater. This being the case, even municipal wells on the coast are impacted by logging practices upgradient. The FMP must include more realistic data with respect to the number of citizens that are impacted in the geographic area covered by this FMP. An independent statistic reports 25,000 people (or 46%) in Tillamook County receive drinking water from the Tillamook State Forest. In addition, over 70 percent of Oregonians get their drinking water from forested lands.

9. Logging practices that include slash burning and pesticide overspray/drift can compromise air quality, a public health risk. According to the Oregon Health Authority, drift and re-volatilization is known to occur at least two to four miles away from an aerial spray site. Furthermore, slash burning removes carbon from the soil profile, negatively impacting soil health. If pesticide use and slash burning occur, ODF shall provide air monitoring to determine exposure. These practices are destroying our fragile native coastal ecosystems and

threatening our communities' health. These practices need to be STOPPED today.

NCCWP wants no more logging and pesticide use in community drinking water sources regardless of who owns the land and wants an end to pesticide applications near where people live, work, and recreate. (2,000 individuals have signed a petition supporting this request.)

Respectfully submitted,

North Coast Communities for Watershed Protection

RE: Public comment regarding the proposed rule to replace the Northwest Oregon State Forest Management Plan, Southwest Oregon Forest Management Plan and the Elliot Management Plan with a single Western Oregon Plan excluding the Elliot State Forest.

Dear Mr. Butteris,
Freres Lumber Co. inc. is a 103-year-old family-owned manufacturing company employing 420 people in the Santiam Canyon. The company is a government contractor relying on State and Federal timber sales for our existence.

We testified against the implementation of an HCP on state lands multiple times and we were disappointed the board voted 4-3 for a 70-year HCP that will mirror the past 30-year catastrophic experience on Federal lands resulting in about one half of Federal timberland destroyed by fire in Oregon.

The implementation of the HCP and the Westside NW Forest Plan will result in less management, more fires, less reforestation, mill closures and continued harm to the economic well-being of rural Oregonians.

It is especially disappointing that ODF has already implemented the HCP prior to its approval by the Federal agencies and it's disingenuous that ODF is asking for public comment when it has already implemented the plan.

Presently there are 3 plans due to the unique characteristics of the Northwest, Southwest and Elliot Forests. Individual plans should remain in place to more effectively and efficiently manage the three forests.

The department has been financially self-sufficient for decades. The change in the Plan and HCP will result in the agency becoming dependent on general fund money and will be continually underfunded in perpetuity. The Private Forest Accord requires money for monitoring and other expenses from the agency that it will not be able to meet its obligations and will be subject to litigation.

It's ironic that ODF is trying to avoid litigation by adopting a flawed HCP and it will continue to be subject to court challenges with or without the HCP. That is the true intent of the urban, liberal litigation industry that the Democratic administration colludes with.

More problems than solutions are being created by the proposed plan and HCP. Rural Oregon timber dependent communities have never economically or socially recovered from the 1993 Northwest Forest Plan, and the HCP just piles more pain and suffering on these communities.

ODF's preemptive implementation of the "proposed" plan & HCP has contributed to the mill closures in Banks, Philomath, Springfield, two in Riddle, Toledo, Pilot Rock and Camas, Washinton and Bingen, Washington over the past 18 months.

The Santiam State Forest lost one half of its forest to fire over Labor Day weekend in 2020. The unburned 25,000 acres of the Santiam Forest is growing 17.5 million board feet annually.

We request the plan revision target 17.5 million board feet of harvest annually on the Santiam State Forest to aid the timber dependent and fire damaged communities in the North Santiam Canyon.

Thank you for the opportunity to comment on the ODF activities.

Sincerely,

Rob Freres

Carol
I think you may be trying to comment on Northwest Forest Management Plan. The place to comment on those is at: odf.sfcomments@odf.oregon.gov with more information at https://www.oregon.gov/odf/pages/rulemaking.aspx.

I am taking comments on the Repeal of rules relating to the Oregon Forest Land Protection Fund and will include these comments if that was your intention, you did that correctly. Please clarify. Thank you for your interest.

I was not able to get into the above mentioned website to leave a comment without joining something and a lot of internet round about. I hope this is not discouraging people from commenting. I hope it was not meant to discourage our comments, and that you will include mine in the official reports.

That said, I believe our state lands should belong tp the people, not the timber companies. We need forests, not tree farms. We also need to guard the few old growth and fully mature forests that we still have as the priceless treasures that they are. They are much more valuable than anything sitting in a museum. I remember driving to the coast through the smoldering ruins of the Tillamook Burn, and being promised that those trees would be replanted, and would be for us to enjoy. Now I see them being demolished. We need our forests, not short sighted timber profits.
Sincerely
Carol Lucas

ODF should not continue business-as-usual that prioritizes timber sales and revenue.
ODF needs to practice climate smart forestry that results in the following:

1) Optimizing carbon sequestration, storage and resilience.
2) Minimizing greenhouse gas emissions.
3) Protecting our mature and old-growth trees.
4) Growing trees longer.
5) Maintaining a diversity of species, ages and structures.
6) Protecting endangered species.

That is how we can protect the ecosystem the forests provide.

[You don't often get email from noelle@350pdx.org. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear ODF Staff,

I'm concerned that ODF is allowing mature, complex forests to be cut faster than they can regenerate in the North Coast area.

From your recent report,* only 11.75% of North Cost forests have complex structure, and the goal is to preserve 30%. Incremental gains of less than a percentage point per year would indicate that cutting of forests with trees over ~45" dbh should be dramatically reduced, or even paused until the 30% is achieved. Given new, strange weather patterns, ODF cannot depend on past growth rates to continue going forward. *See page 20: https://www.oregon.gov/odf/board/bof/20250903-bof-item-b.pdf

You've probably read "The Mother Tree" by Dr. Simard. It's the *Relationships* within these mature forests that are the golden legacy for Oregon's children. Is ODF mired in the old boys' paradigm? There seems to be no shortage of very detailed information about board feet and trees for harvest, but the Draft Plan contains very little detail about how ODF will fulfill its legal obligation to maximize KPMs regarding relationships: forest function, habitat corridors, and ecology. The lack of accountability and detail in the Oregon Draft Forest Management Plan is shocking.

In public administration school, they told us, "What Gets Measured Gets Done." When it comes to this plan KPM 10 appears to be on the back burner.

There are 100 reasons why we are counting on you to do a good job stewarding this public resource owned by all of us, Oregonians.

Get on it, please. Implement ODF rules and legislatively adopted key performance measures requiring protection and enhancement of older mature forests.
The draft Forest Management Plan is a great place to start this paradigm shift toward public accountability.

Please amend the draft plan as follows:

+Base the FMP on the best science available. And add a requirement for all actions to be based on the best science available, as already required under existing law.

+Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

+Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

+Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

+Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

+Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

+The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

The world is crazy enough right now. You are entrusted to manage these rare and precious forest ecosystems that impact our water, soil, and the future of humanity.
Thank you in advance for making these changes to the draft plan and being accountable to future generations.

Dear Forestry Department,

Thank you for the opportunity to submit comments on the Western State Forest Management Plan.

The Department of Forestry is tasked with managing state forests for Greatest Permanent Value, which includes a balance between environmental, social and economic outcomes.

The state's Habitat Conservation Plan definitively checks the environmental and social boxes. Those goals have been thoroughly met. There is absolutely no need to consider additional restrictions on harvest.

Instead, the management plan should focus on active forest management and meeting the third goal of GPV: economics.

That will not compromise other goals. Responsible harvests strengthen forest health, reduce disease and wildfire risk and support restoration activities — all while sustaining Oregon's rural economies and the Department's own budget.

Thank you for the opportunity to comment.

Dear Forestry Department,

Thank you for the opportunity to submit comments on the Western State Forest Management Plan.

The Department of Forestry is tasked with managing state forests for Greatest Permanent Value, which includes a balance between environmental, social and economic outcomes.

The state's Habitat Conservation Plan definitively checks the environmental and social boxes.

However, the management plan can focus on active forest management, meeting the third goal of GPV, economics, as well as support HCP-covered species by setting aside low value timber for instream habitat restoration projects. Often, the logs mills don't want; salmon do. Including requirements for habitat cull logs will assist salmon and aquatic habitat recovery while promoting active timber harvest.

That will not compromise other goals. Responsible harvests strengthen forest health, reduce disease and wildfire risk and support restoration activities — all while sustaining Oregon's rural economies and the Department's own budget.

Thank you for the opportunity to comment.

To whom it may concern:

The ODF needs a new Forest Management plan to stop clearcutting the complex and rich forests of Oregon. We have already logged too many, and I am afraid it is because of the influence of the timber industry. While I recognize that these jobs and timber products are important to the Oregon economy, we *must* take care of our earth and protect our animals and land. I am demanding that the ODF delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, which obviously gives huge lobbying power to the timber industry which is at direct conflict of interest in forest protection and management.

Thank you for your time,
Taylor Frederick

Subject: Input on proposed new Western Oregon State Forests Management Plan
Date: Friday, January 30, 2026 10:17:05 AM

[You don't often get email from hperkins@waterdogstudio.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

I'm writing to offer my input on the proposed new Western Oregon State Forests Management Plan.

I do think an adaptive plan makes sense, but the proposed plan as currently written is too vague, and needs refinement. We need more specific guidelines to make sure we save our old growth and mature forests, and that we don't have loopholes or imprecise language that would allow indiscriminate logging. We need to carefully manage the forest land we have left, and this plan isn't there yet.

I hope you're able to rethink and refine this plan.

Thank you.

Re: Comments on FMP

I am writing to offer my comments on the Notice of Proposed Rulemaking for the Western Oregon State Forests Management Plan (FMP). I live in Portland, Oregon and am Professor (emeritus) of Chemistry at Portland State University and author of the climate science/policy text for laypersons titled *From Knowledge to Power* (Ooligan Press, 2021), which has been widely circulated in Oregon.

In 2021, ODF authored the "Climate Change and Carbon Plan" (CCCP) in response to Governor Kotek's executive order 20-04. This plan set out the principles for climate-smart forest practices, described the barriers to implementing these policies, and did a fine job of describing the economic/social and environmental benefits of this climate-smart approach. In the section titled "Accountability Measures," this plan directs ODF to prioritize climate change in its planning, asserting that, "To the full extent allowed by law, agencies shall consider and integrate climate change, climate change impacts, and the state's GHG emissions reduction goals into their planning, budgets, investments, and policy making decisions." The FMP before us does not fully meet these aspirations, putting at risk the climate-smart forestry goals that are well described in the CCCP. To remedy this, I suggest that ODF amend the NOPR to implement the following:

- Rearrange the guiding principles to place a higher priority on climate-smart forestry. Climate is listed last among the 12 guiding principles that must be followed according to the FMP planning rule (p. 1-2). The FMP refers to the CCCP here (p. 1-7) but only in the most perfunctory way. Instead, the guiding principles are headed by "Greatest Permanent Value," which includes timber production. ODF should better recognize that managing forests to maintain high carbon sequestration (which is not among the GPV guidelines) is essential to best foster the "permanence" called for. I recommend that this section of the FMP be redrawn to integrate climate-smart forestry, especially the maximization of long-term carbon sequestration, alongside the GPV and the other guiding principles that emphasize ecological benefits (principles 2 and 5). By including environmental values in a piecemeal fashion, the Guiding Principles list has the effect of suggesting that they are somehow separate from each other - but of course biodiversity (principle 2) and forest and watershed restoration (principle 5) are intimately linked to a healthy climate. While the FMP does a fair job of integrating CCCP principles later in the document, it would make a difference to rearrange this beginning section.

- Logging rotation times are among the most important variables for maintaining healthy forest carbon stores. The CCCP recognizes that long rotation times are essential for maximizing carbon stores and resilience of the native ecology, but this principle, as far as I can tell, does not appear to have been integrated into the FMP. It should be. The FMP's general statements about following the best available science are welcome, but they should be complemented with more specifics - especially for an issue as central as logging rotations are to maintaining climate-smart forestry. There is an extensive scientific literature showing that longer rotation times correlate well with greater carbon sequestration. This should be emphasized in the FMP.

I would also note that Oregon's mature forests provide irreplaceable ecosystem services and goods. They ensure millions of Oregonians have clean, safe drinking water, help mitigate floods and erosion, recharge groundwater, serve as one of the most valuable carbon sinks on the planet, and support a diverse population of native plants and animals. These natural forests are an essential part of the Oregon way of life. Climate change is all too real, and there won't be much economic value left if the forest is not managed to prioritize managing its effects.

Thank you for the opportunity to comment on this plan.

Thanks, Justin. WSC is very concerned by the wording of this principle for multiple reasons. We recommend deleting this principle, or clarifying this principle to be more consistent with existing language in the GPV rule and to not unduly encourage litigation. I will submit this into the record, but I also want to share this with you.

The FMP will provide ~~sufficient~~ revenue ~~to ensure ODF's ability~~ to manage, conserve, and invest in the forest in order to provide GPV.

I welcome your additional thoughts. Thanks.

Michael

Subject: Question about draft FMP

Hi Justin,

Hope you're doing well. I have a question about one of the principles in the draft FMP.

PRINCIPLE 3—REVENUE

The FMP will provide **sufficient revenue to ensure** ODF's ability to manage, conserve, and invest in the forest in order to provide GPV. (Emphasis added)

I am not aware of any statute or OAR that provides support for this principle. Can you please point me toward any authorities that would require the FMP to provide sufficient revenue to provide GPV? Similar language in the current FMP is the subject of ongoing litigation.

Thanks for your help on this.

Best,

Michael

The League of Women Voters of Oregon, established in 1920, is a grassroots nonpartisan political organization that encourages informed and active participation in government. We envision informed Oregonians participating in a fully accessible, responsive, and transparent government to achieve the common good. LWVOR Legislative Action is based on advocacy positions formed through studies and member consensus. The League never supports or opposes any candidate or political party.

Dec. 23, 2025

To: ODF.SFComments@odf.oregon.gov,

Oregon Climate Action Commission (OCAC), Chair MacDonald

Re: Changes Needed in Draft Western State Forest Management Plan – **Comments**

The League of Women Voters of Oregon (LWVOR) submits the following comments on the Final Draft of Oregon Department of Forestry (ODF)'s **Western Oregon State Forests Management Plan** (FMP), which will provide the management direction for all Board of Forestry Lands for ten years. There are 640,000 acres of state forest lands in Oregon, which include Board of Forestry owned lands (BOFL), the Common School Forest Lands (CSFL) and ODF state forest land west of the crest of the Cascade Range. These lands are just 3% of all Oregon forest land. The plan supersedes and replaces the 2010 Northwest Oregon State Forests Management Plan, the 2011 Elliott State Forest Management Plan, and the 2010 Southwest Oregon State Forest Management Plan.

We base our comments on the national LWV positions on natural resource management: "The League of Women Voters of the United States believes that natural resources should be managed as interrelated parts of life-supporting ecosystems. Resources should be conserved and protected to assure their future availability." In addition, our positions on climate state: "The League supports climate goals and policies that are consistent with the best-available climate science to ensure a stable climate system for future generations." Furthermore, the Oregon League believes that "a full accounting of all costs, including cumulative ecological impacts of timber harvests and other forest uses must be considered in forest activity decisions." This includes planning for future climate impacts for forest resilience and for carbon sequestration and storage so that future generations can meet their own needs [based on Oregon Revised Statute 184.421].

We offer these comments after reviewing the final draft of the September 2025 Western Oregon State Forests Management Plan, as well as the December **2025 Land-Based Net Carbon Inventory** produced by the Oregon Dept of Energy (ODOE) and the Oregon Climate Action Commission (OCAC), and OCAC's **2025 Natural & Working Lands Fund Annual Report** presented in September.

BACKGROUND

All three of these documents refer to the enormous role our forests play in reducing CO2e from the atmosphere by sequestering and storing carbon, especially in mature and old growth trees. Page 6 of the recent Inventory report states: "Oregon's forests remained a net carbon sink in 2024, removing *58.2 million metric tons of CO2 equivalent* (MMTCO2e) from the atmosphere *annually*." However, the state's forest carbon sequestration capacity has declined from 104.5 MMTCO2e in 1990, to 58.2 MMTCO2e over the past 34 years, a nearly 38% decline. This decline in carbon storage in forests happened in spite of the fact that timber harvests were significantly reduced due to the 1994 Northwest Forest Plan, which slashed federal logging by about 90%, and while private harvests' overall volumes plummeted from peak levels (around 8 billion board feet in the mid-80s) to under 4 billion by 2017. Recent severe wildfires have also reduced forestland. Therefore, it is more important than ever that our small patches of state forest lands be protected by ecologically sustainable management to ensure social, economic, and environmental benefits as required by law.

Since the state forests are only 3% of all Oregon forest land, **it is imperative that they continue to be carbon sinks.** If they are over-harvested, these forests will no longer be sustainable for future timber harvest, nor be able to reduce the speed and severity of global warming, nor support the various habitats that endangered species require, nor provide other ecological services which are all part of ODF's charter to provide the Greatest Permanent Value to all Oregonians over time.

The FMP is a high-level document listing 12 management principles, which serve as management guidance for the Habitat Conservation Plan (HCP). Active management is integrated across the landscape guided by resource management "emphasis areas." The plan has mapped out designated areas for General Stewardship, which means areas approved for logging to raise revenue, and High Value Conservation Areas (HCSs) which include both HCAs which are protected forested areas of different age classes in support terrestrial species and Riparian Conservation Areas (RCAs) that protect fish and other aquatic species.

The FMP does not change the current business model requirement that 98% of state timber sales must finance its own activities on state forest lands, with 63.75% of revenues to be distributed to local counties and taxing districts and the remaining 36.25% of revenue to pay for the management of state forest lands. **These rules are legislative decisions, which we believe could and should be altered if we wish to manage state forests for the greatest permanent value (GPV).**

Although the FMP lists great principles with admirable goals, it appears the FMP prioritizes revenue goals over ecosystem services in Chapter 4.1.1 by outlining what will be prioritized when the ODF budget is limited:

> "Funding levels for plan implementation vary with cyclical economic trends. FMP implementation is primarily funded through timber harvest revenues. There may be periods where revenues limit funding. *Annual budget instructions for developing fiscal budgets reflect the Forest Development Fund (FDF) balance and the projected FDF balance. The highest level of implementation and investment occurs when the FDF balance exceeds 12 months of operating expenses, and the balance is forecast to be relatively steady or increasing. The lowest level occurs when the FDF balance is less than 6 months of operating expenses, and the balance is forecast to decrease."*

Since federal funding has been cut severely with H.R. 1 tax changes, and since state income revenues tied to it will also be severely cut for years to come unless the legislature makes major changes, Oregon will have little money for agency budgets. This means most likely that the projected decreased revenue will mean that what little funding there is will go to maintaining "core business and to meet legal obligations" with no new investments. Habitat improvements will not happen and ODF will be more dependent than ever on timber harvests. **We think this section needs to be modified so that habitat is assured in the HCAs and RCAs even in years of reduced budget funding.**

In many areas of the General Stewardship area timber can be cut to raise revenue; the maps in Section 2.12 show areas of "regeneration harvest" or areas designated for clearcuts. **We would like to see this kind of clearcut harvesting method be kept to a bare minimum on state forestlands, and that partial and selective cuts or variable density harvesting and patch cuts be the general rule for harvesting timber.** Scientific research has shown that plantation clearcuts tend to increase wildfire severity, and extreme heat from these fires can harm soils thereby reducing productivity, while often decreasing stream flow and quality within the watershed, which is counterproductive to other management goals.

We would also like to point out several omissions in the FMP. Section 3.1 talks about tree stand age classes with 45% of state forest lands in the 50 to 79 years old range. Approximately 87% of state forest land stands are less than 80 years old with a very small percentage of mature and old growth trees. **The FMP should state explicitly that it will manage to increase the percentages of the mature and old growth age classes by limiting their harvest within the planning areas, and should be managed for longer periods between harvest rotations (60-80 years) as is recommended in the Carbon and Climate Change Plan (CCCP).** There is no discussion of a strategy for longer rotations in general

stewardship areas to increase carbon storage. There is no mention of the goal and strategies to increase the proportion of mature and old growth when discussing age classes on page 44. Although Section 3.1.3 mentions that "compared to even-aged stands, forests with uneven-aged stands often support a greater number of species and are more resistant to windfall and insect outbreaks", there is no mention of a **strategy to replant with mixed species and different aged seedstock or of assisted migration planting after a clear cut, which are climate smart practices that the CCCP embraces.** And there is no discussion of **planting close to slash in heat-stressed areas to preserve and increase moisture when doing regeneration planting after harvest, as is recommended by climate- smart forestry practices.**

In fact, the 3.2.1 **Timber Management** section is especially thin on both goal content and strategic direction, whereas the wildlife goal is complete and includes strategies to attain those goals. **The water and timber strategies are incomplete and should include soil recommendations,** which when soils are healthy, can sequester as much carbon in below-ground biomass as above-ground biomass (see the Inventory pg.4).

In conclusion, **we wish to see more emphasis in the FMP on managing state forest land to increase ecological services and meet climate goals and less emphasis on economic considerations**.

Thank you for this opportunity to write comments on this Final Draft of the FMP and we hope you will include these suggestions for improvement.

Please don’t clear cut the forests. One of the saddest things is seeing the clear cutting of forests as I drive to the coast. It can’t be that profitable to do it, and ODF should certainly not be involved in this. The PNW rainforest is one of the most important carbon sinks outside of the ocean.

I continue to live in Oregon, because I believe it is one of the safest places on earth to live during the global warming that is causing so many species to die off and which will likely cause billions of people to die. When we don’t harm other living beings we feel better.

Best of all wishes,

Deidre

To: SFCOMMENTS ODF * ODF
Subject: OAR 629-035. Draft Western Oregon State Forests Management Plan (FMP)
Date: Tuesday, January 20, 2026 8:15:35 AM

You don't often get email from mhonkomp27@gmail.com. Learn why this is important

While I do not live in Oregon, I travel to Oregon 3-4 times per year primarily for outdoor recreation, but also to volunteer with organizations having the purpose of protecting public lands.

AIR & WATER...we don't need Science to agree that these are the most critical elements supporting human life. We do need Science to guide us in the responsible management of the resources supporting these elements...our Forests and Watersheds. Responsible forest management makes the protection of forest ecosystems its first and foremost priority. Healthy forests are required for clean air and water.

Based on my limited review of the FMP, it appears the State of Oregon is a more responsible fiduciary of public lands than the US federal government (Bureau of Land Management and US Forest Service, specifically). The USG appears to completely ignore forest management science and this ignorance has dire implications on clean air and water, animal and plant species, climate change and wildfire.

However, I do note references to clearcut logging in the FMP. I would hope that the Oregon Department of Forestry understands the science behind clearcutting and limits its use as much as possible, particularly in mature forests. The science is undeniable on clearcutting; it:

- adversely impacts the water quality of watersheds
- it destroys habitat for threatened and endangered species
- it destroys carbon sequestration assets and releases carbon stored in mature forests
- it increases wildfire risk:
  - More often than not, clearcutting leaves massive amounts of woody debris that becomes tinder for future wildfire.
  - Without tree canopy cover, temperatures increase dramatically adding to increased wildfire.
  - Without tree wind breaks, increased wind causes fast spreading fires.

In short, clearcutting mature state forests is contrary to the protection of critical forest ecosystems.

When working revisions to the FMP draft, I urge you to:

- require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

- Delete or amend Principle 3 in the draft. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law. The statement, "Expanding and diversifying revenue sources to support public benefits can increase long-term financial stability." is particularly troublesome. Such revenue expansion will carry with it a cost...the cost of unhealthy forest ecosystems.

You don't often get email from jenhamaker1@gmail.com. Learn why this is important

Oregon Natural Resource Industries (ONRI) is submitting testimony in strong opposition to the current draft Forest Management Plan proposed by the Oregon Department of Forestry.

In 2024, the state already adopted a 70-year Habitat Conservation Plan. That plan fully addresses conservation requirements. The Draft Forest Management Plan ignores that reality and instead doubles down on additional restrictions—at the exact moment Oregon can least afford them.

Unmanaged Forests Are Burning—and We All Pay the Price
We do not need more theoretical protection on paper. We need active forest management.

When forests are left unmanaged, they burn. And when they burn, we lose everything:

- Wildlife
- Clean air and water
- Recreation
- Local economies
- Homes, infrastructure, and lives

The irony is brutal: catastrophic wildfires destroy habitat at a scale no timber harvest ever could—yet those losses are then used as justification to close even more timberland. This is a vicious, self-inflicted cycle.

Jobs, Mills, and Rural Communities Are Being Sacrificed
In 2024 alone, seven mills closed. Those weren't abstract numbers

—they were family-wage jobs in rural Oregon. Once a mill closes, it rarely comes back.

Every new restriction layered onto the Forest Management Plan:

- Shrinks available timber supply
- Undermines mill viability
- Eliminates logging, hauling, and manufacturing jobs
- Hollow-outs rural communities that already operate on thin margins

Rural Oregon does not have the luxury of uncertainty. It needs predictable harvest levels and stable management signals.

ODF's Financial Model Is Being Undermined
Historically, ODF generated enough revenue to operate without taxpayers footing the bill. That was not an accident—it was the result of active management and timber harvest.

Under the HCP, harvest levels are already reduced. The Draft FMP risks cutting them further, which will:

- Reduce revenue
- Increase dependence on the Legislature (taxpayers)
- Trigger staff layoffs and budget shortfalls

Hoping for a legislative bailout is not a plan. The only realistic way to stabilize ODF's budget is to maximize sustainable harvest on every acre where harvesting is still allowed—inside and outside Habitat Conservation Areas.

The Draft FMP Is Out of Balance
Oregon law requires management for Greatest Permanent Value—not maximum restriction.

This Draft FMP:

- Over-prioritizes conservation already addressed by the HCP

- Minimizes economic and social impacts
- Treats forest-sector workers and counties as an afterthought

Forest workers, counties, and mills are not just “stakeholders.” They are essential partners in managing Oregon’s forests—and they deserve clarity, respect, and predictability.

What Must Change
The Forest Management Plan must:

- Stop adding new harvest restrictions beyond the HCP
- Give equal weight to economic, environmental, and social needs
- Prioritize steady, sustainable timber harvest where allowed
- Fully evaluate job losses, mill impacts, and wildfire risk before restricting management

Closing
Reducing harvests does not protect forests—it abandons them.

Abandoned forests burn.

Burned forests destroy wildlife, communities, and public trust.

Oregon cannot regulate its way out of wildfire, economic decline, or mill closures. **We need management, not more restrictions**—and a Forest Management Plan that reflects reality, not ideology.

Sincerely and with grave concern,
Jen Hamaker

Hello Oregon Department of Forestry,

I urge you to uphold your responsibility to protect drinking water, public health, and ecosystems for coastal residents. Logging practices and the use of toxic chemicals that threaten air quality, waterways, wildlife, and human health should not be allowed on public lands.

Environmental damage is costly and often irreversible. The North Coast depends on intact forests and clean water to support communities and a tourism-based economy. Sacrificing these resources for short-term revenue is not acceptable. The loss of old-growth and mature forests undermines ecological stability and harms both people and wildlife.

Forestry activities must not compromise public health. Yet the costs of pollution are borne by residents, particularly low-income families, while timber companies profit. Practices such as slash burning and pesticide spraying, including drift and overspray, pose serious health risks and should be stopped and properly monitored.

Public lands should serve and protect the public. Economic gain does not equal healthy communities. Clean water and clean air must be the priority.

Sincerely,
Rachel Siegel

RE: Western Oregon State Forests Management Plan

The charge to the Oregon Department of Forestry and the Oregon Board of Forestry is to manage the Oregon State Forests for Greatest Permanent Value (GPV) as per OAR 629-035-0020. GPV is clearly defined as "healthy, productive and sustainable forest ecosystems that over time and across the landscape provide a full range of social, economic, and environmental benefits to the people of Oregon." The values enumerated in GPV rely upon each other to achieve the entirety of the goals.

The foundation is built by achieving the first goal of a sustainable and predictable production of forest products that generate revenues for the benefit of the state, counties and local taxing districts. This provides the capital to financially support the staff and activities of ODF. The income from efficient management of the Oregon Forest provides the funds to maintain the high-quality habitat for aquatic life, native wildlife, productive soil and clean air and water, protection against flood and erosion and ultimately provides the outdoor recreational opportunities that we all enjoy.

The Oregon Governor has set an Oregon Prosperity Roadmap which includes strategic goals for Oregon's economy:

- Accelerate Oregon's Economic Growth
- More living wage jobs, now
- Retain and grow Oregon businesses

Oregon State Forests can contribute to all these goals. We must take a hard look at the interaction between State Forest management and the economic goals of Oregon. Maintaining a strong economy is directly related to the ability of the state to fund services to our citizens. There is a direct relationship between harvest levels, county revenue, social service provision, economic growth, employment in living wage jobs and state tax revenue collection. Real economic growth is a priority that we should all support.

Sincerely,

Kellie Jo Smith, Chair

Comments on the Draft Final Western Oregon Forest Management Plan (FMP)

Ernie Niemi, President **31 January 2026**

Please consider these comments when reviewing and making decisions about the FMP. Also, please inform me and all Oregonians of your response to the comments and your actions on my recommendations. Please let me know if you have any questions or want any clarifications.

Qualifications: I have worked in Oregon since 1976, analyzing economic issues associated with natural resources: as a contractor for Douglas Timber Operators, as Vice President of ECONorthwest, and as President of Natural Resource Economics. My work experience includes many assessments of the potential impacts, on Oregon's economy and on the social well-being of Oregonians, of corporate and governmental projects—especially projects that would degrade wetlands and other ecosystems. I have completed similar assessments in other counties of Oregon, in other states, and in numerous countries around the world. My education includes a BS (chemistry) from the U of O, and a Master of City and Regional Planning from Harvard. I co-authored the recent report, The Economic Costs of Climate Change for Oregonians: A First Look.[1] A copy of my resume is available on request.

Summary: The Board and ODF can provide the greatest permanent value to all Oregonians only if they consistently acknowledge these economic realities, incorporate them into resource-management decisions, and represent them to Oregonians in a transparen't and unbiased manner:

- Although logging on State lands might generate some economic benefits for some Oregonians, it also will impose costs on all Oregonians by reducing incomes, increasing the cost of living, and degrading quality of life. Economists call these "external costs" or "social costs" because they are borne primarily by workers, families, and businesses external to logging operations and do not receive the benefit.
- Extensive evidence shows that the external costs from logging on State Lands almost certainly exceed the benefits. Hence, unless presented with compelling contrary evidence, when considering a proposal to log State lands, the Board, ODF, and Oregonians should expect that the external costs for all Oregonians will exceed the benefits, so that proceeding with the logging will diminish overall well-being.
- Extensive evidence shows the Board, ODF, and Oregonians should expect managing State lands to support conservation, restoration, outdoor recreation and related activities probably will generate increasing levels of jobs, personal income, and tax revenues. In contrast although logging might benefit a few, these benefits will shrink over time and but likely will depress jobs, incomes, and tax revenues statewide.

The following text and materials support these summary statements.

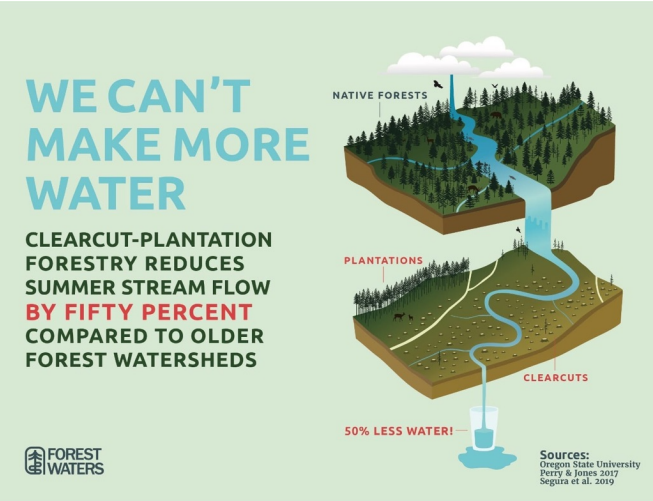
[1] Miller, K., N.R. Netusil, E. Niemi, J. Skov, J. Talberth. 2024. The Economic Costs of Climate Change for Oregonians: A First Look. Forum on Oregon Climate Economics.

External Costs: In today's complex world, any forest-management project that alters the use of natural resources, or modifies their structure, likely will have both positive and negative impacts on the local, national, and international economies. The positive and negative impacts typically are called economic benefits and costs, respectively. Most of the benefits and some of the costs generally will accrue to the project proponents, or to their clients. Many of the economic costs, however, will accrue to workers, families, businesses, communities, and future generations who do not have direct influence over the project, i.e., have no decision-making authority over it. Economists commonly apply the term, "internal costs," to costs that accrue to project proponents. They use the term, "external costs" to describe costs that accrue to others and, as a consequence, generate harm to society as a whole (*see* box).

Projects Harm Society Whenever They Impose External Costs on Others

Internal Cost	= Borne By Project Proponents
External Cost	= Borne By Everybody Else = Harm To Society

External costs from the FMP will materialize whenever it causes people and entities to lose something important to them. Although some of the external costs might involve the loss of something traded in markets, the Board, the Department, and all Oregonians should anticipate that many—probably most—of the external costs will involve the loss of things not traded in markets. For example, the figure in the adjacent box shows that industrial logging can reduce streamflows by 50 percent.[2] Degradation of the quality and quantity of water in streams, Oregonians have lost habitat for salmon and other species, reductions in the populations of these species, opportunities for commercial and recreational jobs associated with these species. Negative ecological impacts on watersheds also have deprived some communities of the safe drinking water they otherwise would have drawn from a nearby stream.[3]



Logging on State lands and related practices hurt Oregonians by diminishing the flow of ecosystem goods and services in three ways: (1) they degrade ecosystems directly by eliminating habitat, degrading soils with road-building and the use of heavy vehicles, reducing tree cover, and exposing lands to sunshine and higher ambient temperatures; (2) they degrade adjacent forests through so-called edge effects and by generating pollution that flows

[2] Green Oregon. 2021. Drinking Water. Oregon Public Broadcasting and Pro Publica.
[3] "Using data and satellite imagery from NASA collected between 1997 and 2023, four researchers from the agency's Oregon Coast Range Ecological Conservation Team were able to look at logging impacts in forests within 80 Oregon Coast watersheds identified by Oregon Wild. About one-third of the forested land in those 80 watersheds — nearly 600 square miles — had been logged during the last 20 years, according to the study." [Baumhardt, A. 2023. NASA Imagery Shows Scale, Impact of Logging in Drinking Water Watersheds in Oregon.]

downstream; and (3) they preclude alternative management practices that would restore the health and productivity of ecosystems degraded in the past.

Of special concern are the potential external costs that would result from ecosystem-degradation that diminishes nature's ability to contribute to human well-being:[4]

> "Nature's contributions to people embody different concepts, such as ecosystem goods and services and nature's gifts. Both nature and nature's contributions to people are vital for human existence and good quality of life (human well-being, living in harmony with nature, living well in balance and harmony with Mother Earth, and other analogous concepts). While more food, energy and materials than ever before are now being supplied to people in most places, this is increasingly at the expense of nature's ability to provide such contributions in the future, and frequently undermines nature's many other contributions, which range from water quality regulation to sense of place."

Many external costs from logging on State lands could stem from an increase in risk. These external costs can fall into three categories. The first stems from the possibility that proposed logging will not unfold as expected and, hence, will fail to deliver the promised outcomes. This risk arises, for example, because, although ODF might promise increases in jobs and tax revenues for local governments, these outcomes might not materialize if the timber industry hires workers from outside Oregon, replaces humans with machines, or persuades lawmakers to allow them to avoid paying taxes. The second category of risk-related external costs comes from the possibility that logging might succeed overall (from the perspective of its proponents) but have greater than expected negative impacts on the environment and communities. For example, the project might produce higher-than-expected emissions of pollution into the air, soils, and water. Or, the degradation of wetlands and the disturbance from noise pollution might induce a sharp reduction in bird populations. The third category of risk-related external costs will materialize whenever there is a likelihood that logging might have a negative impact on the environment or a community, whether or not the negative outcome actually materializes. Parents would experience this type of external cost, for example, every time the project increases pollution emissions—e.g., air pollution from slash burning or water pollution from an oil spill into groundwater—so that parents no longer would have the security of knowing that breathing air or drinking water. The parents will have lost this security, day by day, even if the children do not eventually become ill. This category of external costs stems from the risk itself—the likelihood of a bad outcome—not the bad outcome per se.

None of this is new. A deep, pervasive desire to avoid external costs industrial timber production has been a core motivation underlying Oregonians' support for challenges to the industry's negative impacts on drinking water supplies and other external costs. A large body of research buttresses these views.

The Board and ODF should provide Oregonians with a comprehensive, transparent, and credible assessment of the external costs that would result from any logging on State lands. This assessment should address not just the external costs from each logging project in isolation, but also external costs that would materialize from interactions with other forces and factors affecting the supply of ecosystem services available to Oregonians. The Board and ODF should

[4] Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES). 2019. Summary for Policymakers of the Global Assessment Report on Biodiversity and Ecosystem Services, and Diaz, S., Pascual, U., Senseke, M., et al., 2018. Assessing Nature's Contributions to People. Science 359, 270–272.

enable Oregonians to evaluate the total external costs to them: to all Oregonians as a whole and to different groups of Oregonians. This information also should provide the foundation for the Board and ODF to then describe appropriate actions that must be taken, if they approve logging, for beneficiaries to compensate those who will be harmed (see below).

Default Expectation: The External Costs Will Exceed the Economic Benefits: The Board and ODF should fully describe the economic importance of each proposed logging project's potential negative impacts on biodiversity and ecosystems. This description should highlight the extensive evidence, some of which is summarized below, that demonstrates it would be prudent for Oregonians to expect that the external costs from the negative impacts on biodiversity and ecosystems will be greater—and probably much greater—than the value of whatever economic benefits the project generates.

Research findings just now coming available, for example, substantiate this conclusion with a high level of confidence:[5]

> *"Ecosystem degradation is occurring across all regions [of the world]. Every critical ecosystem is on a pathway to collapse ([i.e.] irreversible loss of function beyond repair)."*

Research findings published in August, 2025, reinforce the conclusion that degradation of ecosystems and biodiversity—across the globe and especially in Western Oregon—is so severe that further degradation, from development or other activities, might trigger catastrophic environmental, economic, and social outcomes.[6] The researchers focused on degradation to the integrity of the biosphere, i.e., the ability of ecosystems to function as systems that provide sufficient organic matter, energy, and nutrient and carbon cycling to support the broader systems that sustain life on Earth:

> *"A stable Earth system requires a healthy biosphere, but many ecosystems are being pushed beyond safe limits due to human activities such as land-use change, resource extraction, or climatic changes…. We show that the integrity of ecosystems has already been critically compromised across large parts of the planet. These findings can inform global and local environmental governance, helping policy-makers, conservation agencies, and land-use planners to avoid further breaching of these boundaries and limiting the risk of triggering large-scale, abrupt, or irreversible environmental changes…. Breaching these boundaries increases the risk of triggering large-scale, abrupt, or irreversible environmental changes that could destabilize Earth's systems…. We find that the local boundary is currently transgressed on 60% of the global land area, with 38% already at high risk of degradation."*

The map in Figure 1, prepared by the researchers, identifies (orange through purple) areas of the Earth where the risk of triggering large-scale, abrupt, or irreversible environmental changes is the highest. It shows that, for western Oregon, damage to the biosphere and ecosystems already is high enough (orange through purple) so that, further damage might trigger "large-scale, abrupt, or irreversible environmental change." The Board and ODF should secure more detailed data from the authors, and apply it t help Oregonians fully understand the likelihood that logging on State lands will degrade their quality of life.

[6] Stenzel, F., and others. 2025. Breaching Planetary Boundaries: Over Half of Global Land Area Suffers Critical Losses in Biosphere Integrity. One Earth.

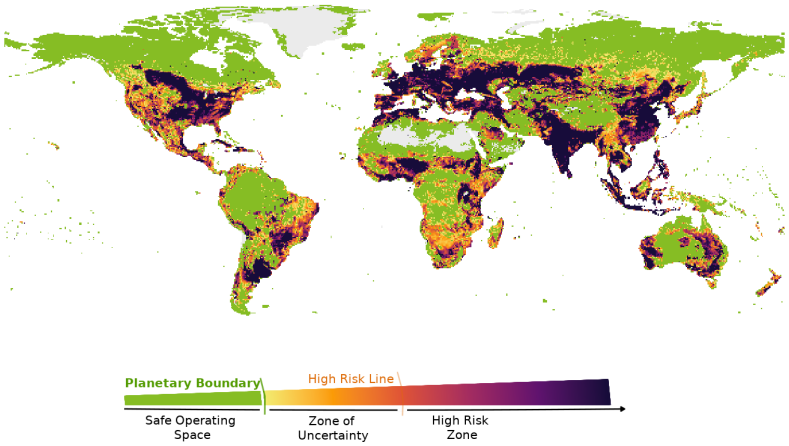

Figure 1. 60% of Global Land Area, Including Western Oregon, Has Already Been Degraded Beyond the Boundary for Functional Biosphere Integrity[7]

These and related scientific findings interlock with evidence that shows economic costs from activities that degrade biodiversity and ecosystems far exceed the economic benefits. A recent review of global research, for example, reached these conclusions:[8]

> *"Our analysis shows that both conservation and ecological restoration bring considerable net benefits in terms of public goods and common pool resources, regardless of the habitat or type of ecosystem state change being considered. … [O]ur findings do suggest that, within the broad habitat and geographic range present in our data,* ***we have typically passed the point where the benefits of further change from nature towards human-modified uses exceed the costs to society****." [**bold** emphasis added]*

Recent research findings from the World Bank highlight the severity of the potential economic damage from actions that degrade biodiversity and ecosystems:[9]

> *"A new World Bank report estimates that the collapse of select ecosystem services provided by nature – such as wild pollination, provision of food from marine fisheries and timber from native forests – could result in a decline in global GDP of $2.7 trillion annually by 2030."*

Moreover, a recent, global assessment of the economic importance of biodiversity and ecosystems—*The Economics of Biodiversity: The Dasgupta Review*—concluded that, because the degradation of ecosystems is so extensive and severe, the future net benefits—to local communities and global society—from activities that restore and conserve the ability of ecosystems to provide goods and services, typically will be more than 4 times the net benefits from industrial activities that diminish this ability.[10] These findings indicate that it would be prudent for the Board, ODF, and all Oregonians to anticipate, as a default assumption, that the

[9] World Bank. 2021. Protecting Nature Could Avert Global Losses of $2.7 Trillion Per Year.
[10] HM Treasury. 2021. The Economics of Biodiversity: The Dasgupta Review.

external costs from future logging's negative impacts on biodiversity and ecosystems will exceed the value of the logs produced by more than 4-to-1.

Additional evidence—even more recent and extensive—buttresses the imperative for the Board and ODF to begin the assessment of each and every potential logging project with the default assumption: the external costs will exceed the economic benefits. This evidence comes from the just-released evaluation of all relevant data and research regarding the current state of the global environment.[11] This report is *"the product of 287 multi-disciplinary scientists from 82 countries [and it] is the most comprehensive scientific assessment of the global environment ever carried out*." Its *"Key Messages"* include:

> *"The economic benefits of action [to conserve or restore ecosystems] exceed the costs of transformation, as the damages from the global environmental crises will become increasingly severe over the coming decades."*

The scientists support this conclusion with a thorough review of relevant, credible evidence that shows:

- *"Despite global efforts and calls for action, our planet has already entered into uncharted territory, facing global environmental crises of climate change, biodiversity loss, land degradation and desertification, and pollution and waste."*
- *"These environmental crises are causing substantial economic and social damage, including to infrastructure, transport, and basic services, harming jobs, livelihoods, economic growth and security, and undermining human health and well-being, food, energy and water security for all people, with disadvantaged populations being disproportionally affected. These crises are already reversing socioeconomic development achievements by increasing poverty and inequalities, and decreasing life expectancy. They can no longer be viewed as simply environmental issues; they are also economic, development, governance, security, social, moral, and ethical issues."*

Board members and ODF staff must not look away from these findings because they contradict past assumptions about the economic consequence from the development and degradation of Oregon's natural resources, or because they have a wider focus than just Western Oregon. Instead, the broad scope of these findings should strengthen both your obligation and your dedication to avoid approving actions that would further degrade Oregon's already degraded forest ecosystems. The Board and ODF must acknowledge that the facts and conclusions apply to State lands in Western Oregon.

In particular, the Board and ODF must reassure Oregonians that they fully recognize the ecological and economic importance of wetlands, and will account for the economic costs that approval of logging would impose on them. These realities are highlighted in this assessment by USEPA:[12]

- *"Wetlands are important features in the landscape that provide numerous beneficial services for people and for fish and wildlife. Some of these services, or functions, include protecting and improving water quality, providing fish and wildlife habitats, storing floodwaters and maintaining surface water flow during dry periods. These valuable functions are the result of the unique natural characteristics of wetlands."*

11 United Nations Environment Programme, and others. 2025. Global Environment Outlook Seventh edition-2025.
12 USEPA. 2025. Why Are Wetlands Important? Website.

- ***"Wetlands are among the most productive ecosystems in the world, comparable to rain forests and coral reefs.*** *An immense variety of species of microbes, plants, insects, amphibians, reptiles, birds, fish and mammals can be part of a wetland ecosystem. … Wetlands can be thought of as "biological supermarkets." They provide great volumes of food that attract many animal species. These animals use wetlands for part of or all of their life-cycle."*
- ***"Wetlands play an integral role in the ecology of the watershed.*** *The combination of shallow water, high levels of nutrients and primary productivity is ideal for the development of organisms that form the base of the food web and feed many species of fish, amphibians, shellfish and insects. Many species of birds and mammals rely on wetlands for food, water and shelter, especially during migration and breeding."*

- ***"Wetlands and People***

  "Far from being useless, disease-ridden places, wetlands provide values that no other ecosystem can. These include natural water quality improvement, flood protection, shoreline erosion control, opportunities for recreation and aesthetic appreciation and natural products for our use at no cost. ***Protecting wetlands can protect our safety and welfare."***
- ***"Fish and Wildlife Habitat***

  "More than one-third of the United States' threatened and endangered species live only in wetlands, and nearly half use wetlands at some point in their lives. Many other animals and plants depend on wetlands for survival."
- ***"Flood Protection***

  "Wetlands function as natural sponges that traps and slowly releases surface water, rain, snowmelt, groundwater and flood waters. Trees, root mats and other wetland vegetation also slow the speed of flood waters and distribute them more slowly over the floodplain. This combined water storage acts as a braking action lowering flood heights (peaks) and reducing erosion (speed)."

  "Wetlands within and downstream of urban areas are particularly valuable, counteracting the greatly increased rate and volume of surface- water runoff from pavement and buildings. The holding capacity of wetlands helps control floods and prevents water logging of crops. Preserving and restoring wetlands together with other water retention can often provide the level of flood control otherwise provided by expensive dredge operations and levees." [**bold** emphasis in original]

Combined, this evidence demonstrates the imperative for the Board and ODF to manage Western Forest Lands, from now forward, with the default expectation: that the external costs from industrial logging will exceed the economic benefits. Evidence closer to home also strongly supports this conclusion. ODF's counterpart, Washington's Department of Natural Resources (DNR), has confirmed this conclusion. After comparing two alternatives—one that would allow logging to proceed, and another that would restrict logging to protect potential nesting sites for northern spotted owls—DNR concluded that the benefits of protecting the habitat are 2–5 times the benefits from logging.[13]

In other words, the global findings indicate that the biodiversity/ecosystem-related external costs from timber production will be at least 4 times the benefits from these actions, i.e., the value of the logs produced. DNR's findings specific to northern spotted owls suggests that the biodiversity/ecosystem-related external costs could be 5 times greater. The net result:

[13] Krug, D., 2007. Preliminary Economic Analysis: Forest Practices Rulemaking Affecting Northern Spotted Owl Conservation. Olympia, WA: Department of Natural Resources.

Oregonians should expect that the Board and ODF have produced a seriously biased, incomplete assessment of its impacts on Oregonians whenever it describes the potential economic benefits from timber production without concurrently warning that the external costs will far exceed the benefits. Ignoring the external costs while highlighting logging-related jobs and revenue will diminish the well-being of Oregonians as a whole, and deceive them about the overall impacts on the permanent value stored in and derived from these lands.

Climate Pollution from Logging State Lands Generates Huge Economic Costs: Logging in Oregon increases the amount of carbon dioxide in the atmosphere and the amount is substantial. Industrial timber production increases atmospheric carbon dioxide via three pathways. One, logging releases carbon dioxide to the atmosphere when a large amount of the carbon dioxide stored in a live tree is burned as slash or decomposes after logging kills the tree. Two, logging emits carbon dioxide directly into the atmosphere through the combustion of fossil fuels to move log trucks and other vehicles, to heat logging-related facilities, etc. And three, logging depresses carbon dioxide sequestration when it kills a tree and prevents it from growing bigger. Replacing this tree with a much smaller seedling does not offset the forgone sequestration that would have occurred if logging had not killed the tree.

These three pathways, combined, cause industrial timber production to be one of the largest climate polluters in Oregon, the U.S., and the world. At each of these scales, many industry advocates argue otherwise, for example by pointing out that lumber used in the construction of new housing might hold the carbon dioxide it contains out of the atmosphere for years. But this and other arguments stem from deceptive assumptions that overlook the three pathways described in the previous paragraph. The following evidence and analysis look at the whole picture.

Figure 2 illustrates the direct logging-related flow of carbon dioxide into the atmosphere on a per-tree basis.[14] To facilitate the analysis, the green bar represents a hypothetical tree that contains 1,000 kilograms (1 metric ton) of carbon dioxide. The next bar shows that more than half of this amount is in the bole (log) that goes to the mill, and the remainder, 460 kilograms, goes into the atmosphere at the logging site when leaves, limbs, etc. are burned as slash or rot in the forest. The next two bars show that more than one-fifth of the carbon in the log (216 kilograms) goes into the atmosphere when sawdust and other waste products are burned or sold for and other uses where they quickly rot. The two bars on the right show that, after accounting for carbon dioxide emitted during the transport process, only 152 kilograms of carbon dioxide remains out of the atmosphere in lumber, paper, plywood, and

Figure 2. Logging-Related Increases in Atmospheric Carbon Dioxide, per Tree

[14] Ingerson, A. 2007. U.S. Forest Carbon and Climate Change. The numbers shown represent nation-wide impacts of logging one atmospheric carbon dioxide, and may vary for different regions of Oregon, reflecting species of tree logged, age/size of trees killed, transport distance to mill, and efficiency of mill.

other products. In other words, the logging-related increase in atmospheric carbon dioxide equals about 85 percent of the carbon dioxide stored in the live tree, before logging.

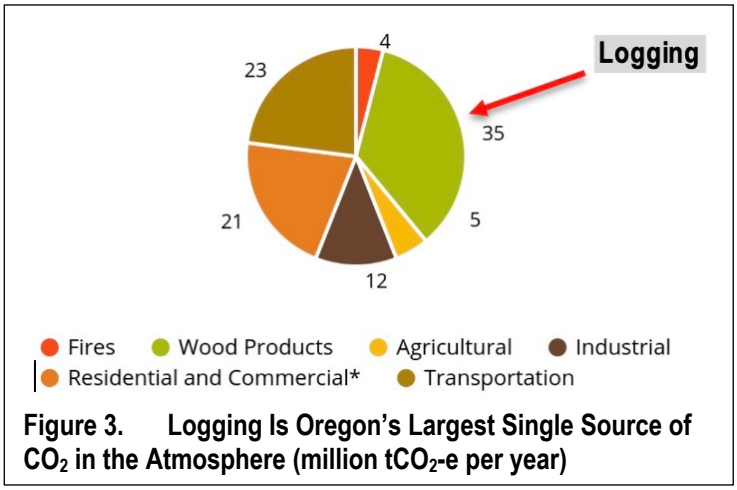

Figure 3. Logging Is Oregon's Largest Single Source of CO_2 in the Atmosphere (million tCO_2-e per year)

It is important to note that even these large numbers do not fully capture the impacts of logging on atmospheric carbon dioxide. They overlook the reality that, when loggers kill a tree, the tree no longer can sequester—remove—carbon dioxide from the air as it grows larger. Thus, logging not only adds carbon dioxide to the atmosphere—by releasing carbon dioxide stored in the tree and by burning fossil fuels—it also kills the ability of a vibrant, growing tree to remove carbon dioxide.

Figure 3 shows logging has been responsible for about one-third of Oregon's total greenhouse-gas (GHG) emissions, more than any other source.[15] Three separate analyses have confirmed this conclusion.[16]

Logging-related CO_2 in the atmosphere imposes economic costs on Oregonians and others. In 2016, researchers for the Bureau of Land Management (BLM) traced the overall impact of logging on the amounts of carbon dioxide in the atmosphere. They then applied an estimate of the economic damage expected to result from each additional ton. This estimate, called the social cost of carbon dioxide, represents the economic cost to human society as each ton added to the atmosphere alters multiple dimensions of the climate and thereby increases the frequency and intensity of harmful events: heatwaves, storms, droughts, floods, insect and disease outbreaks, wildfires, and so much more. The BLM researchers used an estimate, from USEPA, of the social cost of carbon dioxide, about $50 per ton, that showed logging on BLM lands in western Oregon would yield climate-related economic damage of at least $5,000 per truckload of logs.[17] An updated estimate of the social cost of atmospheric carbon dioxide, published by USEPA in 2022, indicates the economic damage, per truckload of logs will be at least $34,000 per truckload.[18] Research published in 2024 shows the social cost of atmospheric carbon dioxide

[15] Segerstrom, C. 2018. Timber is Oregon's Biggest Carbon Polluter.

[16] Law, B.E. and others. 2018. Land Use Strategies to Mitigate Climate Change in Carbon Dense Temperate Forests. PNAS; Hudiberg, T.W., and others. 2019. Meeting GHG Reduction Targets Requires Accounting for All Forest Sector Emissions . Environmental Research Letters; and Talberth, J., and E. Carlson. 2024. Forest Carbon Tax and Reward: Regulating Greenhouse Gas Emissions from Industrial Logging and Deforestation in the US. Environment, Development and Sustainability.

[17] The BLM researchers showed that future logging on BLM lands in western Oregon would result in substantial increases in atmospheric CO_2, and the economic costs resulting from the increases would exceed the value of the logs produced by a ratio of more than 4-to-1. [BLM. 2016. Proposed Resource Management Plan/Final Environmental Impact Statement: Western Oregon. p. 657.] The BLM estimated that the market price of logs would be about $250 per mbf, so a truckload of 5 mbf would have a market value of about $1,250, and the accompanying social cost would be at least 4 times this amount, or $5,000+.

[18] In 2016, the social cost of carbon dioxide used by the BLM was about $50 per ton. EPA's update raised this value to $190, assuming a discount rate of 3% per year, but recognized that, with a lower discount rate, the value would be $340 per ton. [EPA. 2022. EPA External Review Draft of Report on the Social Cost of Greenhouse Gases: Estimates Incorporating Recent Scientific Advances.] The higher number is preferred, with reference to research that shows,

exceeds $1,000 per ton.[19] This raises the economic damage, per truckload of logs, to more than $100,000.[20] These numbers demonstrate that the climate-related costs imposed on Orgonians and others will far exceed the value of the logs. Hence, the Board and ODF should not proceed with any logging until they provide credible evidence that it somehow would reverse this relationship.

Benefits from Logging vs. Outdoor Recreation: Oregonians often hear that continued industrial timber production is necessary for thousands of workers to have well-paying jobs. In reality, though, it aggressively strives to eliminate jobs. Strong downward pressure on jobs has several sources. Some of it comes from transitions in log supply and technology, as larger logs give way to smaller and more uniform logs that can be logged, moved, and processed largely by automated machines.

No reversal of these trends can be seen on the horizon. As the number of jobs declines, less of the income generated by logging and the conversion of logs into paper and wood products flows to workers and, through them, to local communities. Instead, this income leaves the local area and flows to the investors and managers of the industry's corporations.

The negative economic impacts of timber production extend beyond timber-industry workers to the communities where the industry and its workers reside. Extensive research has documented the industry's negative impacts on local communities. A summary of this research, compiled by the National Research Council, concluded that a higher concentration of timber-related activity "seemed to hurt rather than help communities."[21] Much of this "hurt" comes directly from the industry's impacts on workers. Eliminating jobs in the timber industry, for example, can have ripple effects that increase unemployment and the incidence of families in poverty throughout the local community. These outcomes can diminish activity within the local economy, diminish tax revenues for local communities, and stimulate communities to divert resources from other programs to provide public services to the affected families. Note that, although the underlying research looked at the 1990s most of the jobs eliminated occurred afterward and reflect industry's protracted determination to reduce labor costs.

Figure 4 reinforces this message. It shows that timber harvest and employment in wood-products manufacturing in Oregon both declined sharply after 2006, in what many economists call the "Great Recession." By 2013 timber production recovered to earlier levels. Timber employment, however, did not, as the industry permanently eliminated about 10,000 workers, one-third of the pre-recession number.

---

when evaluating the costs from activities that generate pollution that causes environmental deterioration, it is appropriate to use low discount rates, or even negative rates.

[19] Bilal, A., and D.R. Kanzig. 2024. The Macroeconomic Impact of Climate Change: Global vs. Local Temperature. National Bureau of Economic Research.

[20] This discussion disregards estimates from the administration of Donald Trump, who has called climate change a "hoax."

[21] National Research Council. 2000. Environmental Issues in Pacific Northwest Forest Management.

The negative relationship between timber and the social health of communities was reaffirmed by the Bureau of Land Management (BLM), which examined the relationship between log production and local economies. It found that the timber industry is among the world's most volatile, and this volatility has negative spillover impacts on local communities. As a result, the BLM concluded that proposed increases in log production likely would destabilize, rather than stabilize, the economy of nearby rural communities.[22]

Figure 4. In Counties in Western Oregon with Significant Timber Harvest, More Logging Correlates with Lower Wages and More Poverty.

Research in Oregon provides some detail to the negative effects on local economies, by showing a strong statistical correlation between logging and negative economic indicators. Figure 5 illustrates. It shows that, in western Oregon, counties with more logging have lower median wages, and a higher percentage of the population lives in poverty.[23]

Managing public lands to support outdoor recreation and related ecosystem services provide a very different outcome. Substantial evidence indicates that the economic and social outlook could be different if the Board and ODF curtailed timber production and managed the trust lands with an emphasis on conservation and restoration. Some of this evidence comes from research conducted in Oregon, which found that proximity to conserved forestlands typically correlates with faster growth in community wealth. Specifically, communities within 10 miles of land designated for species protection "experienced higher growth in community wealth than communities more than 10 miles from…protected land, even among those that were dependent upon logging."[24]

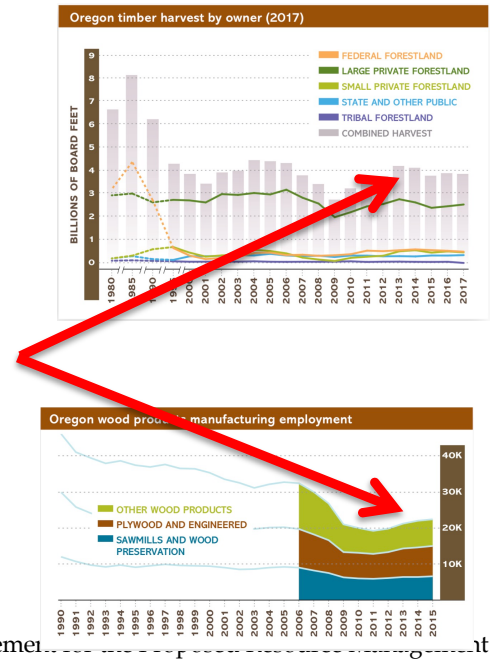

Figure 5. Oregon Timber Harvest Recovered from the Great Recession

…But Mill Jobs Did Not

Table 1 shows results from a recent analysis of 2022

[22] Bureau of Land Management, 2014. Final Environmental Impact Statement and Proposed Resource Management Plan for Western Oregon, page 702. Portland, OR: USDI Bureau of Land Management, Oregon State Office.
[23] County harvest data courtesy of Oregon Department of Forestry. Poverty and median wage data are taken from the U.S. Census. *See* Talberth, J., 2017. Modernizing State Forest Practices Laws to Halt and Reverse Deforestation. West Linn, OR: Center for Sustainable Economy.

contributions to Oregon's economy from the state's outdoor-recreation industry. These data reflect only the economic contributions from trip-related expenditures and do not include contributions from outdoor-recreation-related expenditures on recreation gear, apparel, etc. The data show that, for just the four counties shown, trip-related expenditures supported 44,575 jobs. This number is approximately five times 8,869, the number of jobs, statewide, in the forestry and logging industry in 2021.[25] Trip-related expenditures for outdoor recreation in the five counties produced $1.756 billion income for workers. The expenditures and income generated $380 million tax revenues for state and local governments.

Table 1. Contributions to Oregon's Economy from the Outdoor-Recreation, 2022

County	Employment	Labor Income (million)	State and local Tax (million)
Clatsop	9,096	$401	$82
Columbia	516	$18	$4
Tillamook	8,535	$319	$76
Lincoln	26,428	$1,019	$218
Total	**44,575**	**$1,756**	**$380**

Between oregon Forrest services and oregon department of transportation.

Forrest management, need to change the rules.

We need to cut back trees. On public & private sector land 50ft to 100ft back from any paved oregon roadway. This will help with future fire management, roadways from being impacted by down timber, make it so wildlife is more visible to roadway users to avoid unnecessary vehicles hitting wildlife end life of the animals..

Also by doing this, it will help with evaluation if a fire was to happen in timber near roadways, also create fire buffer, between Forrest split by roadways.

Also to help with wildlife, is to do more selective thinning projects, & cleaning of loose timber products, the whole tree is useful, for to long to much is left behind or put into slash piles..
This loose timber product if potentially fuel for fires later, we are in 2025, land mangers with private land owner use computer to map the land contact you clear cut their timber, calculate the planting and future 25yr harvest of the newly planted timber... we have giant grinders, that can wood chip the loose product to be sent to paper mills, instead of grinding whole useful trees into woodchips.. so better Forrest management is also to clean up after logging operation, removal of the whole sites products, & immediately system replanting so its ready for a selective cut in 25yrs.. the timber is already spaced out to make old growth.. trees are spaced out to help mitigate, wildfires. Same thing our native population did, clear underbrush ..

By imposing these new things, you create new revenue & jobs.. safer travels in oregon..

Example of locations van doser corridor, hwy 18, highway 6, highway 22. Other oregon hwys..

Im traffic control flagging contactor, that works for logging operations & landowners that are slowly removing roadside trees to prevent potential damage from fire, but ive heard it from job to job ive been doing lately they have to leave some trees near the roadway & its to expensive to clean up the land, the environmentalists say the fish & other wildlife need the leftovers from harvest.. but its all leftover fuel for future fire...

As hunter, oregonian, i believe in conservation, protection of the environment, but we have to do it smarter & better, responsible harvest and replanting is part of that... i enjoy walking thru thinned out timber hunting, cleaned up sites no bunch of extra fuel for wildfires, also im disabled in the hips, its nice to not trip over messes of brush limb piles after perviously logging operation that was required to take everything harvested. Or pull up landing that was cleared up of huge piles of timber products..

Thanks for taking my comments into consideration

Yahoo Mail: Search, Organize, Conquer

Dear Oregon Department of Forestry,

Thank you for your continued work managing our State forests. Few States in our country have the privilege of managing something as uniquely valuable as our Oregon State Forests. As you are working to finalize the new Western Oregon State Forests Management Plan, I encourage you to recognize and act to preserve the ability for our State forests to provide for Oregonians.

The standing timber in our State forests give Oregonians the ability to provide for ourselves and our State. Steady and predictable harvest on our forests directly fund schools and county governments. We also fund the management and maintenance of those forests themselves. Many Oregonians, including myself, provide for their families directly from our State forests. Countless others make their living from jobs that benefit second-hand from our working forests. The best way to provide for Oregonians and their future is by managing our working forests for a maximized sustainable yield. This management strategy gives Oregon the most opportunity and flexibility to have healthy forests and to pay for the things Oregonians need.

My grandfather's dream growing up on the East Coast was to work in the Oregon forests. In 1946 he made that dream a reality and I am a third-generation forestry professional in the State of Oregon. I am now sharing my passion for Oregon forests with my kids. Please plan to keep our forests working for the benefit of future generations of Oregonians.

Thank you for the opportunity to be a part of the planning process.

Subject: Our drinking water must be of Greatest Permanent Value in the the ODF Forest Management Plan
Date: Thursday, January 22, 2026 8:15:05 AM

You don't often get email from carl@alittlecolor.com. Learn why this is important

To those drafting the current Oregon Forest Management Plan,

I'm sure you will agree that safe and plentiful drinking water is critically important to Oregon communities. And so, of course it must be considered of Greatest Permanent Value in the ODF Forest Management Plan. Whatever else may be considered worth pursuing on our forestlands, local communities being able to count on the safety and availability of local drinking water is paramount.

I am a citizen of Wheeler Oregon. Jetty Creek just south of me provides the drinking water for my neighbors in Rockaway Beach, except when it doesn't, because it has become clogged with turbid sediment from clear-cut logging, or when it has become carcinogenic because so much chlorine has been required to address that turbidity, and carcinogenic molecules end up in our drinking glasses. Same problem in Oceanside and other communities on our coast. I am a member of *North Coast Communities for Watershed Protection* (NCCWP). We believe strongly that logging and pesticide use in community drinking water sources is dangerous and should be illegal, regardless of who owns the land. We want an end to pesticide applications near where people live, work, and recreate. We support public officials who understand this critical right to feel confident that what's coming out of the tap is safe for our children.

Please place our local drinking watersheds at the top of the list when considering Greatest Permanent Value. How could anyone argue against such a basic human right?

Thank you,
Carl Whiting, PhD
Wheeler Oregon

The Citizens of Oregon urge Oregon Dept. of Forestry to adopt a new Forestry Management Plan to support sustainable harvest while protecting imperiled wildlife, fish, and the forest habitat they depend on.
Please end clear-cutting and boundary mergers of previous cuts.
Consider implementing a statewide tree planting jobs program to create livable wage jobs, encourage a healthy lifestyle and reconnect young people with nature to reduce childhood obesity and improve health outcomes for youth at risk.
Sincerely,
Tim Moxley

Subject: Please End of Clearcutting on Mature Legacy State Forests
Date: Wednesday, January 14, 2026 8:59:42 AM

You don't often get email from youaregolden@gmail.com. Learn why this is important

We need mature forests.

It’s time for a strong Forest Management Plan!

After decades of large-scale clearcuts and overharvest, 17 species including 10 fish species, 3 amphibians as well as coastal marten, red tree vole, Northern Spotted Owl and Marbled Murrelets have been pushed to the brink of local extinction. Mature forests (older than 80 years old) continue to be clearcut despite regulations requiring protection of older legacy forest stands. “Legacy forests” are structurally complex, mature, naturally regenerated forests that have retained traits of the native forests that preceded them.

Please save our forests and all the creatures that live in them, save it for your grandchildren.

Many thanks,
Serafine

Dear Forestry Department,

Thank you for the opportunity to provide input on the Western State Forest Management Plan.

I strongly encourage the Department to adopt a plan that prioritizes the needs of working forests and the rural communities that depend on them.

For the sake of balanced stewardship, financial stability, and the long-term health of Oregon's forests and rural communities, it is vital the Department move forward with a plan that emphasizes strong economic performance.

A substantial portion of state forestland has already been dedicated to wildlife habitat, and the Department's own projections show these areas will more than meet environmental objectives. Further restrictions are unwarranted.
With these conservation commitments already secured, the focus should now shift toward ensuring sustainable economic outcomes. Countless families and timber-reliant communities depend on responsible forest operations for steady jobs and economic stability.

Additionally, revenues from state forest harvests are vital for counties, schools and local taxing districts. Curtailing timber production threatens their ability to deliver essential public services and undermines the Department's requirement to remain financially self-supporting. ODF must continue generating the revenue needed to operate without shifting costs to taxpayers.

It is important that the Department resist ongoing pressure from anti-forestry groups seeking additional limitations that are neither necessary nor balanced.

Thank you for your consideration.

Dear Forestry Department,

The Board of Forestry has already aligned with Environmental groups agenda by shutting down over 50% of our state forests. These forests have the most valuable timber in the world, but not if they burn! Nothing benefits when they go up in smoke!

Our forests have been shut down enough! 90% of federal timberland - GONE
56% of state timberland - GONE
Millions of acres of PRIVATE timberland -GONE

When is enough, ENOUGH?

I strongly encourage the Department to adopt a plan that prioritizes the needs of working forests and the rural communities that depend on them.

Dear ODF,

I believe your draft Forest Management Plan for our western forests is flawed, and can be improved to protect mature complex forests and endangered and threatened species. Our priority should be climate smart practices that involve optimizing the carbon sequestration that so many of our forests excel in. Storage, resilience and protection of mature and old growth stands is essential for keeping our treasures standing for the future. Please grow our trees longer, and copy nature's patterns when it comes harvesting/regrowth and maintenance of diversity.

Thank you,

I am writing to comment on the draft Western Oregon State Forests Management Plan. I appreciate the intent to create a flexible, adaptive framework that can respond to new science and climate change, but I am concerned that the plan is too vague to provide real, enforceable protection for forests, water, and wildlife over the next 70 years.

I urge strengthening of conservation guidelines of mature and complex forests beyond the areas covered by the Western State Habitat Conservation Plan. While the HCP is a significant step and will protect some western state forests from logging, the remaining 57% of state forests also contain critical habitat and carbon‑rich stands that are essential for climate resilience and species recovery. The department's previous goal for 30–50% of these forests to be complex, mature stands has not been met, with recent reporting showing only 11–18% complex forest structure. This shortfall underscores the need for clear, time‑bound, and enforceable conservation targets in the new plan.

I am also troubled that the current plan does not sufficiently protect our watersheds. Although the plan acknowledges that 46% of watersheds in Clatsop County are listed as impaired under the Clean Water Act, it does not include specific goals or strategies to improve water quality for salmon, other aquatic species, and local communities. A state forest management plan should clearly spell out how forest practices will restore watershed health, not just recognize existing impairment.

In short, the plan should move beyond broad principles and include measurable standards and timelines for:
- Conserving a higher percentage of mature and complex forests outside HCP reserves.
- Helping previously cleared or damaged forest regions and neighboring ecosystems to regenerate and restore richer biodiversity.
- Improving water quality in impaired watersheds.
- Ensuring that logging levels and practices are consistent with long‑term sustainability, climate, habitat, and clean water goals.
- Empowering the public to be able to hold the state agencies and logging companies accountable over the life of this 70‑year plan.

Please revise the draft to include these broader, concrete, enforceable conservation commitments and transparent benchmarks.

Thank you for working to protect and restore the priceless forests, water, and biodiversity we all depend on and appreciate so much as Oregonians.

Sincerely,
Paul Naylor

You don't often get email from becky.a.neal@gmail.com. Learn why this is important

Hello,

Please stop clearcutting our legacy forests! “Legacy forests” are structurally complex, mature, naturally regenerated forests that have retained traits of the native forests that preceded them.

ODF set a target to retain 30-50% of older forests over a decade ago. Currently less than 14% of mature complex forest is left and continues to be logged. This needs to stop.

We need to restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

We need to ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

We need accountability: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Write a better forest management plan that protects our beautiful forests for decades to come.

Thank you,
Becky Neal

The draft FMP may sound or look good on paper, yet there seems to be little accountability or assurance our air and drinking water will be or is being, currently protected. This is a public health issue. Drinking water sources must be protected from sediment, diminished quality and pesticide/herbicide contamination.

All of us have a right to clean air and clean drinking water over corporate profits. Management of these forests has been out of balance, heavily favoring clearcutting and timber revenue, over sustainable management, restoring healthy mature forests and watersheds.

Forest activities must never negatively impact drinking water sources or impair personal public health. Communities should not have to pay the price from the mismanagement of these public lands.

The following must be addressed in the FMP:

1. Page 8 of the Oregon Forest Resources Institute Trees to Tap Report reports up to 4 pesticide applications are used on seedling plantations depending upon existing competing vegetation. While glyphosate (the most used chemical) is less mobile in the soil, most of the others commonly used i.e., imazapyr, MSM, SMM are MODERATELY to VERY mobile in soil. The FMP must include language that requires minimized use and/or provide alternatives to pesticides to protect drinking water sources and wildlife.

1. According to the EPA and DEQ, 46% of Clatsop County watersheds are impaired. The FMP must be more specific about how to support safe drinking water for communities and developing management and restoration plans to restore water quality to healthy levels within 10 years.

1. Private lands and private industrial logging properties, are regulated by the Oregon Forest Practices Act. The draft FMP must acknowledge this disparity, and provide assurance that these industrial properties are regulated in a manner that is (at a minimum) protective to drinking water sources as those properties covered by the FMP.

1. Revenue for state forest management activities should be sustainable and not tied to

selling off public lands and profiting from clear cutting. Delete or amend principle 3 in the draft FMP.

1. Restore, healthy, mature forests. Stop all clearcut timber harvest of complex layered stands in the North Coast State Forests until (at least) a minimum of 30% of forests are in this condition as required by current rules and policies. We are currently at 11%.

1. The FMP should also include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of 17 imperiled species who rely on habitats only found in our state forests.

1. Add strategies to implement the Climate Change and Carbon Plan for state forests, and meet directives and Governor Kotex's executive order 25-26 on climate resilience.

There's a lot of various needs at the table, however that being said, clean, healthy drinking water should be THE GREATEST PERMANENT VALUE, for us all and for all future generations.

To lessen the financial pressure on ODF to provide funds for rural communities, please develop a carbon plan and reinstate the severance tax.

Thank you for considering my comments.

Subject: Public Comment on Draft Forest Management Plan – Protect Oregon's Legacy Forests
Date: Thursday, December 18, 2025 12:59:31 PM

You don't often get email from reneemluckey@gmail.com. Learn why this is important

Dear Oregon Department of Forestry Team,

I am writing to submit public comment on the draft Forest Management Plan currently under review.

I am deeply concerned about the continued clearcutting of mature and legacy forest stands in Oregon's state forests. These forests are not easily replaceable resources. They are structurally complex ecosystems that provide irreplaceable habitat for imperiled wildlife, protect watersheds, support salmon recovery, store carbon, and contribute to the long-term ecological and economic resilience of our state.

According to publicly available information, Oregon state forests have already lost the vast majority of their mature, complex forest structure. Less than 14% of these forests remain, despite previous targets to retain 30–50% of older forest stands. Continued clearcutting of forests over 80 years old undermines those goals and places additional pressure on already declining species, including Northern Spotted Owls, Marbled Murrelets, salmon, amphibians, and other sensitive wildlife species.

While I recognize the importance of sustainable timber harvest and economic considerations, I believe Oregon can and must do better in balancing revenue generation with its responsibility to protect public trust resources. The draft Forest Management Plan should go further to:

- End clearcutting in remaining mature and legacy forest stands
- Prioritize conservation of structurally complex forests critical to wildlife recovery
- Align forest management more fully with the Habitat Conservation Plan and long-term climate resilience goals
- Ensure that short-term revenue does not come at the cost of irreversible ecological loss

State forests belong to all Oregonians, present and future. Once legacy forests are cut, they are gone for generations. I urge the Oregon Department of Forestry to adopt a Forest Management Plan that reflects precaution, stewardship, and a genuine commitment to protecting Oregon's remaining mature forests.

Thank you for the opportunity to comment and for considering the long-term health of Oregon's forests, wildlife, and communities.

Sincerely,
Renee Luckey

You don't often get email from iaj@uoregon.edu. Learn why this is important

My name is Isaac Jacobowitz , I'm a longtime Oregon resident, and a UO student studying environmental studies along with planning, public policy, and management. I believe our forests are part of what makes Oregon unique, and I feel a sense of responsibility and kinship towards them, as well as a practical understanding and appreciation of their ecological and socioeconomic importance.

I am curious about the possibility of including carbon banking into our state forests as a mechanism to generate revenue. ODF is trying to strike a balance between the need for revenue to both fund its own operation efforts and support Oregon communities. But as of currently, preserving forests so that they may facilitate active and uninterrupted carbon sequestration, not just carbon storage, is at odds with generating revenue through timber sales. The science shows us that right now the Greatest Permanent Value is in maintaining and expanding our forests whenever possible, wherever it is responsible to do so, on account of the opportunity cost presented by not maximizing climate mitigation. This creates a conflict between Oregon's need for a baseline of economic activity and our generation's need to sequester and store as much carbon as possible, whenever possible, both for ourselves and our future grandchildren. I believe ODF could consider adding a carbon banking mechanism within their manegment, as a way to provide rural areas with a degree of alternative funding. I know there are inherent difficulties in such a proposal, and many would argue carbon banking ought to be left to the market mechanisms of timber sales, but I think the creation or encouragement of a carbon credit market managed by the state could have promise, even if it is as simple as breaking up timber sales into smaller chunks to give smaller actors a shot at bidding for purposes beyond stand harvesting. I believe this may be especially attractive in cases where the average age of a stand is higher than the median, or where the stand may facilitate a greater degree of forest connectivity if not harvested. My contention here is not that trees are in any way non-renewable, rather that for purposes of carbon sequestration, it is better to manage established stands then sell them for timber and regrow them; and one avenue to do that without losing revenue may be encouraging or setting up a carbon credit market.

In truth, I would prefer a reality in which we decide that timber plays a smaller but far steadier role in the local economy and invest heavily in creating long lasting jobs in other industries all across Oregon. But here and now I think Oregon should at least explore the possibility of using the timber assets it holds as potential carbon credits.

Additionally, in conversation with other students, it would be appreciated by both me and my peers if proper page numbers could be adopted on reports, in addition to the standard formatting.

To Whom It May Concern:

I am writing today to ask you to please STOP all cutting on mature legacy forests in Oregon State Forests. I urge you to adopt changes to the plan that address key issues:

- Sustainability of our forests which serve many purposes in our state
- Drop Principle 3! Do not prioritize logging over all other uses of our forests.
- Better protection for endangered species – we must step up their protections to ensure their RECOVERY, not further imperil their survival by destroying habitat they depend on
- Fight climate change – mature forests sequester a great deal of carbon. We need a carbon market program.
- Ensure clean waterways for our fish like salmon and other aquatic creatures
- Base the FMP on the best science available, not market conditions or greed. This is required by law.
- Halt all clearcut in North Coast state forests until a minimum of 30% of the forests are mature as required by current policies and regulations

Please amend to restore balance to our forests by adding specific language requiring compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the State Legislature. These should be referenced in the document. Thank you for your kind attention to this. We, the public, appreciate the opportunity to have input into the new plan. We must restore protections and balance.

Dear Forestry Department,

As you are considering comments on the Western State Forest Management Plan, disregard calls by special interest groups to lock up more of our state forests.

Enough already. They clearly don't understand the definition of balance; they will only be satisfied when every acre of Oregon's forests is off-limits to timber harvest.

Despite the fact that the Board of Forestry advanced a Habitat Conservation Plan that delivers an abundance of wildlife habitat and protections for at risk species, they continue to assert it's not enough. Because it will never be enough for them.

Now is the time to deliver on outcomes for the rest of Oregonians who depend on timber harvests for the health of our rural communities. We can have responsible timber harvests while protecting the environment – this is what Oregon does best.

Please develop a management plan that demonstrates to us that rural communities are important, too.
Thank you.

Sincerely,

Don Silbernagel

RE: Comments on the Western Oregon State Forests Management Plan submitted by Albert LePage, Eugene, Oregon

I am submitting these comments on the Western Oregon State Forests Management Plan (FMP) to urge the Oregon Department of Forestry (ODF) and the Board of Forestry to align the final plan with contemporary science and with the principles of Ecological Forest Management (Dr. Jerry Franklin). Ecological Forest Management (EFM) is built on sustaining the integrity of forest ecosystems, maintaining a wide array of ecosystem services (including drinking water and climate regulation), using adaptive management, and deliberately reducing risk while preserving future options.

From that perspective, the draft FMP is a step forward in some respects (e.g., explicit recognition of climate change, adaptive management, and habitat conservation planning).

HOWEVER, it still under-protects legacy forests, fails to make drinking water a true Greatest Permanent Value, and continues to rely too heavily on industrial clearcutting in older stands and sensitive watersheds.

Therefore, here's the specific input being offered along with recommedations on the draft FMP as follows:

1. Manage State Forests under Ecological Forest Management Principles

The Ecological Forest Management (EFM) framework calls for using natural forest development and disturbance regimes as the model for management, reserving older forests, retaining biological legacies, lengthening rotations, and integrating stand-level treatments into a landscape design that maintains all successional stages. Central tenets include: (1) restore and sustain ecosystem integrity (including top predators), (2) sustain a broad array of ecosystem services, (3) adapt management to new science and changing social priorities, and (4) choose approaches that reduce risk and increase future options.

The draft FMP explicitly adopts an “ecologically sustainable management approach” and emphasizes ecosystem services, adaptive capacity, and adaptive management. It also incorporates landscape zoning through the Forest Land Management Classification System (FLMCS), Habitat Conservation Areas (HCAs), and Riparian Conservation Areas (RCAs), which is consistent with EFM’s call for explicit spatial allocation of different emphasis areas.

HOWEVER, the plan still allows extensive clearcut-style regeneration harvests and short rotations in General Stewardship lands, including in older, complex stands that function as legacy forest, which contradicts Franklin’s guidance that existing older forests should be reserved and that regeneration harvests, where used, should be variable-retention with substantial live and dead legacy structure.

Recommendations: Amend the FMP to explicitly commit ODF to applying Ecological Forest Management across all state forest lands by:

- Reserving existing older forests and individual old trees within younger stands using a science-based age and structural threshold, consistent with Franklin and Johnson's restoration framework for moist forests.
- Replacing traditional clearcuts with variable-retention harvests that retain substantial live trees, snags, and down wood in all regeneration activities, especially in moist, high-productivity coastal forests.
- Lengthening rotation ages in production-emphasis areas to allow development of complex structure, larger diameter trees, and deeper crowns, which supports biodiversity, carbon storage, and resilience while still providing timber.
- Formalizing in the FMP that stand- and landscape-level prescriptions must be evaluated against EFM principles (ecosystem integrity, ecosystem services, adaptive learning, and risk reduction) before implementation.

THESE CHANGES would harmonize the FMP's stated themes of climate adaptation, ecosystem services, and adaptive management with an established, peer-reviewed ecological forestry framework appropriate for Western Oregon's moist temperate rainforests.

2. Stop Clearcutting Older Legacy Forests and Explicitly Conserve Them

ODF is still clearcutting older, structurally complex "legacy" forests on the North Coast, even as habitat for imperiled salmon, northern spotted owls, marbled murrelets, and other species continues to shrink. Legacy forests—older stands with large trees, multi-layered canopies, abundant snags, and coarse woody debris—are irreplaceable reservoirs of biodiversity and key anchors for climate resilience and carbon storage.

Franklin and colleagues relative to EFM emphasize that in moist Pacific Northwest forests, older forest stands should be reserved from regeneration harvest and managed primarily for conservation values, with younger plantations thinned and treated to accelerate development of large trees and complex structure.

HOWEVER, the draft FMP acknowledges that forests with complex stands support more biodiversity and are more resilient to wind and insects than simple even-aged stands, but it does not set binding limits on clearcutting of such stands or a clear, measurable acreage objective for complex, older forest conditions.

Recommendations: Bring the final version of the FMP into alignment with Ecological Forest Management and existing state rules and policies, such that ODF should:

- Halt all clearcut or clearcut-like regeneration harvests in complex, multi-layered older stands on North Coast state forests until at least 30 percent of these forests are in complex, late-successional conditions, consistent with current policy targets.
- Define "legacy forest" in the FMP using objective structural criteria (large mean diameter, high snag and down-wood abundance, multi-layered canopy, presence of remnant large trees) and map these stands in the FLMCS layer to ensure they are placed in conservation-emphasis categories.
- Prohibit conversion of mapped legacy forests to young plantations, and limit management in those stands to light thinning or gap creation designed to maintain or enhance late-successional structure and habitat.
- Prioritize plantations and alder-dominated stands for variable-density thinning, creation of snags and coarse woody debris, and other treatments that accelerate development of late-successional attributes, as recommended by Franklin and Johnson.

THEREFORE, these actions would not eliminate timber production, but would shift wood supply to

younger and less complex stands while ensuring that scarce legacy forests are conserved for biodiversity, Tribes, recreation, and climate stability.

3. Treat Drinking Water as a "Greatest Permanent Value" and Strengthen Water Protections

The draft FMP presents “Greatest Permanent Value” as a blend of social, economic, and environmental benefits, listing examples such as timber production, fish and wildlife habitat, and recreation.

HOWEVER, Figure 1-1 does not explicitly identify drinking water as a Greatest Permanent Value, despite the fact that state forests provide source water for tens of thousands of Oregonians and that the Forest Practices Act explicitly includes domestic drinking water among resources that must be maintained.

FURTHER, Nearly half of salmon streams in the Clatsop State Forest are listed as impaired for water quality under the Clean Water Act, and that 46 percent of Clatsop County is reported as having impaired water, primarily from sediment and elevated temperature. This is consistent with Department of Environmental Quality (DEQ) data showing many coastal forest streams with fair to poor water quality and temperature, sediment, and nutrients as common limiting parameters. Industrial-style clearcutting on steep slopes, dense forest road networks, and short rotations all increase peak flows, landslide risk, sediment delivery, and stream heating, which directly harms salmonids and increases drinking water treatment costs for downstream communities.

Recommendations: The FMP should be amended to:

- Explicitly list “protection of high-quality drinking water for communities” as a Greatest Permanent Value in Figure 1-1 and throughout the plan, consistent with statute requiring maintenance of domestic water sources.
- Protect all domestic drinking water sources (surface water intakes, springs, shallow wells, and unregistered sources) within or downstream of state forest lands from sedimentation, flow reduction, and contamination by pesticides and herbicides.
- Require ODF to notify all downstream and downwind landowners in a watershed of proposed harvesting, road construction, aerial spraying, and slash burning, and to request and map domestic water source locations so that site-specific protective buffers and prescriptions can be developed using best available science.
- Prohibit forestry activities that measurably degrade drinking water quality or quantity, recognizing that current practices externalize treatment and health costs onto consumers; include a process for compensating communities when forestry-related degradation occurs.
- Minimize aerial pesticide use in source areas for drinking water, prioritize non-chemical vegetation management, and, where chemicals are used, select compounds with low mobility, low persistence, and low toxicity to aquatic life and humans, consistent with findings summarized in the “Trees to Tap” report on pesticide mobility (e.g., Imazapyr, metsulfuron methyl, sulfometuron methyl).

FURTHER, the FMP’s drinking water section should be strengthened by requiring watershed-scale forest management and restoration plans for all DEQ-listed impaired streams within state forests, with a clear objective to restore temperature, sediment, and other parameters to levels protective of salmon and community water supply within 10 years.

4. Bring Revenue and “Greatest Permanent Value” into Legal and Scientific Balance

The draft FMP acknowledges that GPV is not about maximizing any single outcome, but about providing a blend of environmental, social, and economic benefits over time and space.

HOWEVER, Principle 3, as written, effectively requires that timber revenues fund all state forest management activities, ensuring that harvest volume and revenue considerations continue to dominate operational decisions and overshadow ecological and public health values.

FURTHER, ecologically-based forestry consistent with EFM explicitly distinguishes it from “production forestry,” which is grounded in agronomic models and economic optimization at the expense of ecological integrity. Ecological forest management instead uses older forest reserves, extended rotations, variable retention, and diverse silvicultural pathways to simultaneously provide wood, habitat, water regulation, and carbon sequestration, thereby reducing long-term risk and expanding future options.

Recommendations: Amend Principle 3 and related language to:

- Remove the requirement that timber revenues alone must fund all state forest management and implementation, and instead recognize that achieving GPV—including clean water, climate resilience, species recovery, and recreation—may require diversified funding (e.g., general funds, climate/carbon finance, recreation fees, conservation grants).
- Clarify that compliance with environmental laws (Clean Water Act, Endangered Species Act, Oregon Forest Practices Act, habitat conservation plan), Board of Forestry performance measures, and the protection of public health are non-negotiable constraints that cannot be subordinated to short-term revenue needs.
- Establish that timber harvest levels and spatial patterns must be determined after ecological, water quality, species conservation, and climate-resilience objectives have been met, not the other way around, consistent with the ecological forestry hierarchy of EFM.

THEREFORE, this rebalancing would NOT eliminate revenue from timber, BUT it would ALIGN the FMP with both the legal meaning of "Greatest Permanent Value" and the scientific understanding that long-term community wellbeing depends on intact, resilient forest ecosystems.

5. Strengthen Climate Mitigation and Adaptation through Longer Rotations and Reduced Clearcutting

The draft FMP appropriately acknowledges that climate change is already altering disturbance regimes, increasing drought stress, and elevating risks from insects, disease, and wildfire. It also notes that Western Oregon’s highly productive forests are exceptionally effective at sequestering and storing carbon and references ODF’s Climate Change and Carbon Plan (CCCP). Ecological forest management research shows that moist temperate forests managed with longer rotations, higher structural retention, and conservation of older forests can provide some of the highest levels of carbon storage and continued sequestration while also reducing vulnerability to high-severity fire and other disturbances.

HOWEVER, large-scale clearcutting with short rotations reduces average stand age and carbon stocks, increases soil disturbance and decomposition, and can amplify peak flows and landslides, undermining both climate mitigation and climate-resilient water supplies. By contrast, variable-density thinning, extended rotations, and retention forestry maintain higher live and dead biomass, protect deep soils, and create structurally diverse stands that are more resistant or resilient to drought, pests, and wind.

Recommendations: To fully integrate the Climate Change and Carbon Plan and EFM into the FMP, ODF should:

- Commit to longer minimum rotation ages on state forests, especially on moist, productive sites, to increase on-site carbon stocks, water regulation, and habitat quality while still providing a

sustainable flow of timber.
- Phase down reliance on large, clearcut-style regeneration harvests, particularly on steep slopes and in drinking-water source areas, replacing them with partial cuts, small openings, and variable retention prescriptions.
- Explicitly adopt a carbon-informed silviculture framework in which stand prescriptions are evaluated for their net effects on long-term carbon storage, avoided emissions, water quality, and habitat, not just short-term growth and yield.
- Explore and implement carbon-market or ecosystem-service finance mechanisms that reward longer rotations and conservation of legacy forests, providing alternative revenue streams that reduce pressure to over-harvest.

THIS APPROACH is fully consistent with Dr. Franklin's assertion that "managing forests and landscapes based on ecological forestry principles will generally be the most effective strategy to prepare for climate change."

FURTHER, this approach would also directly benefit rural communities that depend on reliable, high-quality water and stable forest-based economies.

6. Commit to Species Recovery, Not Just ESA Compliance

The draft Habitat Conservation Plan (HCP) and FMP are intended to prevent further declines of imperiled fish and wildlife and to provide regulatory certainty for timber operations.

HOWEVER, while the HCP is necessary to avoid local extinction of listed species, it is NOT, by itself, SUFFICIENT to ensure recovery of the 17 imperiled species that rely on state forests.

FURTHER, ecological forest management treats conservation of older forests, riparian systems, and landscape connectivity as core objectives, not side constraints, and uses thinning and carefully designed regeneration harvests to improve overall ecological integrity and species viability.

Recommendation: The FMP should:

- Explicitly state that ODF's goal on state forests is to contribute meaningfully to the recovery (not just persistence) of threatened and endangered species that depend on these lands, beyond the minimum ESA compliance framework in the HCP.
- Add strategies, independent of the HCP, to increase the extent and quality of late-successional habitat, large snags, coarse woody debris, and interior forest conditions for focal species such as salmonids, northern spotted owls, and marbled murrelets.
- Use adaptive management, including rigorous monitoring and structured decision-making, to adjust harvest levels, spatial patterns, and prescriptions where performance measures and HCP metrics show species not on a recovery trajectory.

IN SUMMARY, I urge ODF and the Board of Forestry to revise the Western Oregon State Forests Management Plan so that it:

- Is explicitly grounded in the principles of Ecological Forest Management as developed by Dr. Jerry Franklin and colleagues.
- Stops clearcutting older legacy forests and secures AT LEAST 30 percent of North Coast state forests in complex, mature and late-successional conditions.
- Treats drinking water as a "Greatest Permanent Value," with strong, enforceable protections for all domestic water sources and impaired salmon streams.
- Rebalances revenue and Greatest Permanent Value so that long-term legal and ecological

obligations—water quality, climate resilience, and species recovery—are NOT subordinate to short-term timber receipts.
- Implements climate-smart, carbon-conscious silviculture with longer rotations and reduced reliance on large clearcuts.
- Commits to the RECOVERY, not merely the persistence, of the many imperiled species that depend on these forests.

THESE CHANGES would move Western Oregon’s state forests much closer to the SCIENTIFICALLY grounded, ecologically RESILIENT, and SOCIALLY JUST forest management vision that Dr. Franklin -- and Oregonians such as myself -- have advocated.

Greetings, my name is Jake and I am a student or Portland. I have learned that the management protocol for how we manage our forests here in Oregon is deeply flawed. In my time studying environmental science it became clear to me that Oregon must transition into a holistic and science based approach to managing the land. Currently clearcut forests that are replanted with Douglas fir mono crops are the dominant landscape of the coast range ecosystem. Mature forests are the most productive in biomass production as well as species diversity, bringing the resilience that is otherwise lost when old growth forests are cut down to stumps. I encourage you to take a moment and think about whether or not you want your kids, your grand children ,and their kids, to be able to bear witness to the natural wonders we can today. I hope you do. I feel it should be the right of the common people to maintain access to ancient forests. If we do not change the current system of forestry management to encourage clean waterways, protection for threatened wildlife species, conserving the old growth forests we have, and accountability for those who are abusing our public lands resources. Thank you for your time.
Sincerely - Jake Andrew

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan.

Oregon's mandate for managing state forests is clear: Greatest Permanent Value requires a balanced approach that accounts equally for environmental, social, and economic benefits. In recent years, that balance has tilted heavily toward environmental and social objectives.

With the Habitat Conservation Plan, those objectives have been fully addressed. The HCP provides expansive habitat protections and long-term conservation certainty. Because these goals are already met, additional harvest restrictions are unnecessary and would only deepen the existing imbalance.

The management plan should now turn its attention to the third pillar of GPV - economic outcomes - by restoring active forest management. Responsible, well-planned harvests improve forest health, reduce susceptibility to disease and wildfire and support critical restoration work. At the same time, they provide dependable jobs, strengthen rural economies and ensure the Department can fund its own operations without shifting burdens to taxpayers.

Rebalancing Oregon's state forest management is essential to achieving true GPV. I encourage the Department to advance a plan that recognizes the equal importance of economic vitality alongside environmental and social stewardship.

Thank you for considering these comments.

Sincerely,

SEVEN CAPES
BIRD ALLIANCE
Working Together for Birds and Nature

Chair Kelly
Oregon Board of Forestry - State Forests Division
2600 State St.
Salem., OR 97310

Public Comment to the Oregon Board of Forestry

Dear Chair Kelly, Interim State Forester Kate Skinner, and Members of the Oregon Board of Forestry:

Thank you for this opportunity to comment on the draft Forest Management Plan (FMP) for Oregon's state forests. Seven Capes Bird Alliance works to protect birds, wildlife habitat, and the ecological integrity of Oregon's coastal and forested landscapes for current and future generations.

Our comments are consistent with the Governor's Executive Order 25-26, which focuses on climate resilience. The Executive Order directs state agencies to protect and restore lands/waters (including forests), promoting climate-smart practices for healthier, more resilient Oregon landscapes.

We urge the Board to substantially amend the draft FMP to bring state forest management back into legal, ecological, and ethical balance. Oregon's state forests are public trust lands. They must be managed for clean water, healthy ecosystems, climate resilience, and biodiversity—not primarily for short-term timber revenue.

Base Forest Management on the Best Available Science

The Forest Management Plan must explicitly require that all decisions and actions be based on the best available science, as required under existing Oregon law. This requirement must be clearly stated and enforceable within the FMP itself. Science-based management is essential to ensure long-term forest health, wildlife viability, and resilience in the face of climate change.

Require Accountability and Legal Compliance

The draft FMP must be amended to require full compliance with all applicable laws, policies, plans, and key performance measures adopted by the Board of Forestry and the Oregon Legislature. These requirements should be incorporated by reference into the FMP so they

are binding and enforceable. A management plan that treats legal obligations as “optional” undermines public trust and exposes the state to unnecessary risk.

Restore Balance to State Forest Management

Seven Capes Bird Alliance strongly urges the Board to delete or substantially amend Principle 3 of the draft FMP, which requires timber harvest revenue to fund all state forest management activities. This approach improperly prioritizes logging above all other forest values and conflicts with the legal mandate to manage state forests for multiple benefits. State forests are not industrial tree farms; in reality, they are complex ecosystems that provide clean water, wildlife habitat, carbon storage, recreation, and community well-being.

Halt Clearcutting of Mature and Legacy Forests

We call on the Board to immediately halt clearcut timber harvest of complex, layered forest stands on North Coast state forests until at least 30% of these forests are in mature forest condition, as required by current rules and policies. Mature forests are irreplaceable for birds, wildlife, watershed protection, and carbon storage. Continued clearcutting of these stands undermines decades of policy commitments and places ecological values at risk.

Protect Water Quality for Salmon and Communities

The FMP must require the development of forest management and restoration plans for watersheds with impaired water quality. These plans should be designed to restore water quality to levels that support salmon and other aquatic species within ten years. Clean, cold water is essential not only for fish and wildlife, but also for downstream communities that rely on healthy watersheds. Many of the streams within our state forests are on the 303d list for impaired water quality.

Address Climate Change and Build Forest Resilience

The Board should amend the FMP to include clear strategies to implement the Climate Change and Carbon Plan for state forests. This includes shifting to longer rotations between harvests, reducing reliance on large-scale clearcutting, protecting high-carbon forest stands, and establishing a carbon market program. Oregon’s state forests must be part of the climate solution, not contributors to the problem.

Commit to Recovery of Imperiled Species

While the Habitat Conservation Plan (HCP) is a necessary step to prevent further harm, it does not ensure the recovery of threatened and endangered species. The FMP must include additional, specific strategies to contribute to the recovery of the 17 imperiled species currently struggling to survive in Oregon's state forests. Preventing extinction is not enough; recovery must be the goal.

Conclusion

Oregonians expect state forests to be managed for the long-term public good. The draft Forest Management Plan, as written, continues to prioritize timber revenue at the expense of forest health, wildlife, water quality, and climate resilience. We urge the Board of Forestry to amend the FMP to reflect the law, the science, and the values of the people of Oregon.

Thank you for the opportunity to comment and for your service to Oregon's forests.

Thank you for taking the time to read these letters and listen to what your neighbors in oregon are concerned about. I'm hoping the draft FMP can be updated to be more specific about how you will be protecting public drinking water as a human right. As you know, each time you clearcut a large area of forest, and then subsequently spray the land with chemicals, you are diminishing the supply of clean drinking water. clearcuts cause less water to be absorbed into the ground, and the chemicals are forever contaminating the soil and in turn us as residents. Please ban all spraying + protect our water.

To whom it may concern,

My name is Ben Smith, and I am the log buyer for RSG Forest Products in Molalla, OR. Our sawmill here in Molalla employs 300 people and supports hundreds of other working families including Loggers, truckers, foresters, mechanics, railroad workers, Electricians, plumbers, equipment dealers, etc. Our need for consistent, sustainable sources for logs is critically necessary to our operation. 70% of any given sawmills cost is in logs, and as that resource becomes more and more scarce because of political ideology instead of practical science based management, it forces facilities like mine to disappear.

Eastern Oregon is already a prime example of what happens to rural communities when natural resources are mismanaged based upon politics. Already over regulated forests start to get beat up by more proposed regulation and litigation until everything burns, which then allows for the regulation to all but disappear in order to salvage what's remaining. Then when the salvage takes place, there are almost no mills remaining to actually purchase the logs. In addition, all other vital contractors such as loggers, truckers, road builders, etc start to disappear. This leaves rural communities even more vulnerable to wildfires which have been completely devastating (ie Paradise, CA).

The west side of the Cascades is on a similar trajectory. The continued push to add additional restrictions on all ready over regulated forests will create additional scarcity, which has, and will cause more sawmills to shut down costing the state vital jobs and tax revenue. ALL science based prescriptive forest management practices including thinning, clearcuts, fire-brakes, etc. should be utilized based upon what the forest needs, not on blanket policies enacted by legislation or extreme political ideologies on both sides, that force their will through legal action.

Outside of habitat and riparian conservation areas, the Oregon Department of Forestry should be managing the forest according to the "greatest permanent value" as required in ORS 530.050. Active forest management utilizing clearcuts, thinning, etc allow balance environmentally, socially, and economically.

My hope is that me and my species (Homo Sapian), will have equal consideration when making forest management decisions that affect MY home, MY job, MY ecosystem.

Thank you considering my comments as you manage our state forests.

I am writing to you today to ask that the State Forest Lands be managed for Water, Wildlife and Recreation NOT TO PRODUCE WOOD FIBER AND CARBON DIOXIDE. Clearcut harvesting has destroyed and degraded Western Oregon Forest Lands and water quality for over a century and is the cause of constant LANDSLIDES AND AQUATIC HABITAT DESTRUCTION! The landslide that CLOSED HWY 229 INDEFINITELY was the result of a Weyerhauser clearcut approximately 20 years ago. For far to long we have allowed the Capitalist Corporations to control and dictate Forest Practices for the benefit of shareholders and the determent of Oregonians and Nature. It is time to show the world what PROPER MANAGEMENT OF FOREST LANDS COULD LOOK LIKE by PROTECTING THE COASTAL STATE FOREST for present and future generations of people, plants and animals. It was at one time the Largest Carbon Sequestrating Forest on Earth and could be again if only it were allowed to heal and grow. Thank you ~ Waverly Hayner Yachats, Oregon 541 547-4011

We must stop clearcutting: centuries of growth, irreplaceable landscapes can be gone in a single season of harvest. And once gone, these stately forests will never to return, future generations left with tree farms instead of rich ecological and biological environments. We will all be poorer.

Use the best science available and comply with existing law:

- Commit to recovery of threatened and endangered species by including specific strategies.
- Fight climate change and build climate resilience by adding strategies to implement the Climate Change and Carbon Plan for state forests.
- Ensure clean healthy waterways for salmon and communities by developing forest management and restoration plans for watersheds.
- Lastly, delete Principle 3, a driving force for bad management practices.

I am writing to express my deep concern about the state of Oregon's mature legacy forests due to excessive clearcutting that is occurring.

Right now, less than 15% of our mature forests exist which is in violation of the Habitat Conservation Plan of 2024. The new Forest Management Plan that is now required needs to be based on the best science available! This needs to be a REQUIREMENT in the new plan.

:An additional amendment needs to require compliance with all applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the State Legislature.

Principle 3 in the current draft needs to be deleted or amended. Currently, it requires revenue from timber harvest to fund ALL of state forest management activities, continuing to prioritize logging over all other values in our state forests - in violation of the law.

Halt all clearcut timber harvest of complex layered forest stands in North Coast forests until a minimum of 30% of the forests are in mature legacy condition, as required by current rules and policies.

Ensure clean waterway conditions for salmon and communities by developing management and restoration plans for watersheds with impaired water quality. W ater quality needs to be restored to healthy levels for all acquatic species within 10 years.

Please plan for climate change and ways to build climate resilience. Shift to longer rotations between harvests, reduce reliance on large scale clearcutting, and establish a carbon market program.

This new plan needs to commit to the recovery of threatened and endangered species in our state forests. The Habitat Conservation Plan alone will not be enough to lead to recovery of these species. The Forest Management Plan HAS to have SPECIFIC strategies to **contribute to the recovery of the 17 imperiled species that are currently struggling for survival in our state forests.**

PLEASE! It is time for a much stronger Forest Management Plan that will lead to revitalizing our legacy forests in 10 years!

Sincerely,

Elizabeth Willis

To the Oregon Department of Forestry,

I am writing to formally object to the draft Western Oregon State Forest Management Plan, and to express deep concern that the Oregon Department of Forestry continues to operate in a way that prioritizes the interests of large industrial forestry corporations over the public interest, climate science, and the long-term health of Oregon's forests and communities.

As written, this plan reads less like a public stewardship document and more like a continuation of regulatory capture. It normalizes clearcutting, including in mature and legacy forests, despite overwhelming scientific consensus that clearcutting undermines carbon storage, increases the threat of wildfires, reduces climate resilience, harms hydrologic stability, actively reduces biodiversity, and impedes long-term forest productivity. This approach is fundamentally incompatible with Oregon's climate commitments, salmon recovery goals, and obligation to manage state forests for the greatest permanent value for all Oregonians.

Clearcutting degrades drinking water sources, increases sedimentation and stream temperature, and worsens flooding and landslide risks. In Clatsop and elsewhere, it directly contributes to already unacceptable levels of stream impairment that harm salmon and downstream communities. It erodes the recreation economy, from fishing to hiking to tourism, and replaces diverse, resilient forest ecosystems with simplified plantations that are more vulnerable to fire, disease, and climate stress.

Perhaps most troubling is that this approach actively undermines a truly sustainable local timber economy. Industrial clearcutting favors short-term extraction and consolidation, not long-term rural livelihoods. Science-based forestry centered on continuous canopy cover, longer rotations, and ecological complexity supports stable jobs, higher-quality wood, healthier watersheds, and intergenerational value. ODF's plan, by contrast, doubles down on a model that externalizes costs onto the public while privatizing profits.

At this point, incremental tweaks are insufficient. Oregon needs a decisive break from clearcutting as a management practice.

I am calling for the following actions:

1) ODF must immediately reject clearcutting as a forest management tool on all state forest lands, and advocate for a statewide ban on clearcutting on both public and private lands. Enforcement must be real, not symbolic, with serious criminal penalties, including meaningful jail time, for willful violations by operators, contractors, and corporate decision-makers who authorize or carry out illegal clearcutting. Anything less will continue to treat fines as a cost of doing business.

2) ODF must realign its management framework with the best available climate, hydrology, and ecological science, prioritizing carbon storage, watershed protection, biodiversity, fire

resilience, and long-term forest productivity over short-term timber volume.

3) ODF must confront and correct the structural conflicts of interest that have led to repeated deference to large industrial forestry interests at the expense of communities, tribes, workers, fish, wildlife, and future generations.

Oregon's forests are a public trust and a critical climate asset, not a liquidation account. Managing them as if we were still in the last century is irresponsible and indefensible. The climate crisis, biodiversity collapse, and water insecurity demand a fundamentally different approach, now, not a decade from now.

I urge you to withdraw and substantially rewrite this plan to reflect the reality of the science, the needs of Oregonians, and the moral obligation to steward forests for those who come after us. If you're not able to follow the science, if you're not able to implement these recommendations, you should really resign from your job, either because you are corrupt, or because you are incompetent.

Sincerely,
~Garlynn

To protect and restore balance to our state forests, the draft Forest Management Plan (FMP) should be amended. Our state forests should place a priority on practicing climate-smart forestry. Climate-smart forestry involves optimizing carbon sequestration, storage and resilience, while minimizing greenhouse gas emissions. Practices include protecting our mature and old-growth trees, growing trees longer, and maintaining a diversity of species, ages, and structures.

Western Oregon's state forests are vital to the survival of wild salmon in Oregon. These public forests also provide clean drinking water to 500,000 residents, habitat for threatened wildlife, recreation, and a tremendous capacity to absorb carbon to mitigate climate change.

While ODF's Climate Change and Carbon Plan calls for growing older trees and setting aside carbon reserves, the draft Western Oregon forest management plan continues a business-as-usual approach that prioritizes timber sales and revenue over climate-smart forestry. This needs to change.

Thank you for your consideration,

Cathy Lewis-Dougherty

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan.
I urge the Department to advance a management plan that supports working forests and rural communities. Please do not give in to anti-forestry activists' insatiable demands for more restrictions.
Over half of state forests have already been set aside for wildlife habitat and the Department's own modeling demonstrates those acres will over-deliver on environmental outcomes. Enough is enough.
Now is the time to focus on economic outcomes that will not compromise conservation goals already in place. Timber-dependent communities and families rely on these forests for stable employment and economic vitality.
Counties, taxing districts and schools depend on revenue from state forests for their budgets. Reductions in timber harvests not only jeopardize their ability to provide crucial services to their communities but also jeopardize the Department's self-sufficiency. ODF must generate revenue to sustain operations without burdening taxpayers.
For the sake of balanced management, fiscal responsibility and the long-term vitality of Oregon's forests and communities, please advance a forest management plan that focuses on economic outcomes.
Thank you for your time and consideration.

From: Joseph Stenger
To: SFCOMMENTS ODF * ODF
Subject: The draft Western State Forest Management Plan needs revision to protect the ecosystem
Date: Friday, January 30, 2026 8:03:39 PM

You don't often get email from joseph.stenger@gmail.com. Learn why this is important

Thank you for the opportunity to comment on the Forest Management Plan. It needs to be adapted in several ways. We should not be prioritizing timber harvest, but should prioritize restoration of mature healthy forests that provide tremendous public benefit. Healthy forests clean our air, filter and purify drinking water, protect endangered salmon and other wildlife, reduce the risk of severe wildfires, and sequester carbon to reduce greenhouse emissions. Healthier forests with diverse species provide superior recreation compared to tree farms.

We must stop clearcutting mature forests until the inventory of such forests again reaches at least 30%. The Plan must require moving to longer rotations between harvest to allow trees to mature so they are more fire-resistant, must promote growth of a variety of species, must reduce reliance on large-scale clearcutting, and must establish a carbon market program to monetize the value of intact forests.

There are more than a dozen imperiled species in our forests. The Plan must include detailed provisions for protection of these, in addition to what is laid out in the HCP. The Plan must lay out how it will repair impaired waterways.

ODF's Climate Change and Carbon Plan promotes the growth of older trees and the preservation of carbon reserves. Meanwhile this draft Western Oregon Forest Management Plan prioritizes timber sales and revenue over climate-smart forestry practices. This is a disastrous direction in regard to wildfire prevention, maintenance of biodiversity and protection of the climate.

The FMP should specify reliance on the best available science, as is legally required. The FMP should spell out compliance with all applicable laws and performance measures.

We can do better than this draft. Please take these issues into consideration as you revise this draft into one that fits our rapidly changing world with so many threats to the natural world, threats that mature healthy forests will help us fight.

Thank you for your work on our behalf,
Joseph Stenger MD

Subject: use of herbicides and pesticieds in forrests and there effects on humans and animals.
Date: Wednesday, January 28, 2026 11:08:53 PM

You don't often get email from joshhofmann@yahoo.com. Learn why this is important

Dear Department of Forestry,

The use of pesticides and herbicides spray not only poison's humans that live on water collection systems and wells but also greatly impacts wildlife specifically amphibians.
The Oregon spotted frog use to be present just 2 years ago and right after a recent logging clear-cut was sprayed. I haven't seen a frog in the area sense.
Amphibians absorb pesticides directly through their skin at rates up to 26 times faster than mammals.
Commercial herbicides like glyphosate can cause 40% to 100% mortality in frogs when sprayed at recommended label rates.
The herbicide Glyphosate was also found present in water collection systems used as bathing and drinking water.
Which was also close to the area that was sprayed.
Amphibians absorb pesticides directly through their skin at rates up to 26 times faster than mammals.
Commercial herbicides like glyphosate can cause 40% to 100% mortality in frogs when sprayed at recommended label rates.
Beyond immediate death, herbicide exposure can lead to reduced growth, behavioral changes, and developmental abnormalities (like malformed limbs).
Glyphosate, specifically, has been shown to cause developmental issues and reduce motility in tadpoles.
The presence of glyphosate in private water systems is a major health concern, especially sprays over, or near, watersheds, wells and water collection systems.
I propose if plants needed to be kept in check to use brush cutting methods instead of herbicides and natural predators to combat insects.
Please reconsidered approval for the use of herbicides and pesticides in our forests this year.

Thanks,

Josh Hofmann

Subject:	Western Oregon Forest Management Plan Draft 2025-2026
Date:	Saturday, January 24, 2026 2:55:54 PM

[You don't often get email from peatea0@yahoo.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Thank you for taking public comment on this Forest Management Plan. The work that's been done to create a responsible plan is impressive but biased in favor of industrial forestry. Suggestions to help rectify this follow.
Phyllis Thompson
Manzanita, OR 97130

RE Draft Goal 3 carbon sequestration, and Goal 15 roads
* MEASURE AND REPORT CARBON COSTS WHICH ARE PART OF INDUSTRIAL TIMBER HARVEST PROCESS.
Especially relevant for Goal 3, since carbon storage in intact forests cannot be compared to carbon storage in forest products unless carbon costs of harvest operations are measured. Carbon costs of industrial forestry include fossil fuel use by harvesting equipment and truck transport, road construction, smoke and other pollutants, pyrolysis, emissions, etc. Costs of this measurement and objective observers should be borne by industrial harvesters.

RE Draft Goal 1 forest health, Goal 10 drinking water health, Goal 11 air quality standards, and Goal 12 protect soils from damage.
* MONITOR AND REPORT HERBICIDE, FERTILIZER, AND PESTICIDE USE, including pathways to air, soil, and water (especially drinking water). Include timing, chemicals used, and frequency of applications.

RE Draft Goal 10.4 high quality drinking water.
* MAKE THOSE WHOSE ACTIVITIES DEGRADE DRINKING WATER RESPONSIBLE TO PAY FOR CLEAN-UP.

RE Draft Goal 2 demonstrate smart forest management, Goal 5 ecosystem restoration, Goal 6 functional and resilient ecosystems, Goal 7 suitable native habitats, Goal 8 diverse understory, Goal 9 dynamic aquatic habitats, and Goal 21 establish relationships with communities. Also Goal 13 revenue.
* ENGAGE CITIZENS TO TRAIN AND PARTICIPATE IN HABITAT RESTORATION.
A good opportunity would be to create groups to apply the Mayakawa method of planting diverse native forests which grow to maturity in 50 rather than 200 years. Similar projects for various restoration zones could assist forestry workers and create community commitment to maintaining local resiliency.

RE Draft Goal 13 revenue.
* INCREASE THE SIZE OF MINIMUM BIDS FOR TIMBER PARCELS.
This is the quickest way to increase revenue. Higher prices on timber is warranted now and in the future because truly carbon-storing timber is a resource at risk. Young trees in monoculture plots store less carbon than mature diverse forests. If trees are not cut, the carbon storage capacity of developing forests grows. Therefore, parcels which do not sell in one season contribute value to the wider society and ecosystem. Until carbon costs of industrial harvest are measured, the only way to recuperate the carbon damage to the ecosystem is to charge for estimated damage as part of the original sale.

RE Draft Goal 13 revenue, Goal 14 timber provides economic opportunity, and Goal 17 public harvest of special products for commercial use.
* Work with Oregon legislature to
.. TAX PROFITS ON INDUSTRIAL TIMBER HARVEST TO PAY FOR PUBLIC SERVICES, INCLUDING ODF AND SCHOOLS.
.. TAX PROFITS ON SPECIAL FOREST PRODUCTS SOLD COMMERCIALLY.
.. ALSO CREATE A SUPERFUND TO HELP FORESTS AND COMMUNITIES THREATENED BY

WILDFIRE.
ODF should work with the Oregon legislature to eliminate out-dated tax protections for industrial forestry. HB 3489 is the current bill which would re-institute severance tax for large forest tracts as well as small. The legislature will also see a bill to create a Superfund paid into by fossil fuel multinationals to help combat wildfires and develop community resilience plans.

RE Draft Goals 14.3 and 14.4 timely response to disturbances and young stand management.
** ADD "WITHOUT CREATING FINANCIAL BURDENS FOR THE PUBLIC."

Testimony for the proposed new Western Oregon State Forest Management Plan:
Dec. 9, 2026

In Chapter 3 of the proposed plan, the graph on Distribution of Stand Ages as a Percentage of Western Oregon State Forests shows that
stands 80 years old or older are less than 20 percent. That essentially means older stands will likely never be greater than 17 percent
of Western state forests. Historically, trees hundreds of years old dominated Western coastal forests. Stands with trees over 100 years old
are now approx. 5 percent of state forests, according to the graph. This is a bleak statistic for mature temperate rainforests of the Coast Range.

The percentage of mature stands should be increased, using stands that are 75 years old or older as much as possible, especially in the vicinity
of the trees older than that. The goal should be 25 percent mature stands in each state forest. That leaves 75 percent to be managed primarily for
human exploitation to varying degrees. The emphasis on early and mid-aged seral stages is completely out of balance for trees that are capable of
living 1000 years.

Anything less is a token conservation effort of what is now called legacy forests. They are important for watersheds and thousands of species that
thrive primarily in diverse rainforests in our region. They are important for recreation, foraging, and other activities that do not degrade the forest
ecosystem.

Please stop allowing the small amount of healthy diverse forest to be cut down. You can't deny the negative effects from the clear cuts any longer.

The forest management plan should be based on science, not the timber companies wishes.

It doesn't make sense to cut the trees down for funding for the State Forests.

Protect the watersheds. Don't destroy them!

Respectfully submitted by an Oregon resident since 1999. I am advocating for my grand nieces and nephews.

To Whom It May Concern:

Thank you for sharing your draft management plan for Oregon's Western state forests with the public, and allowing us to comment. I appreciated the comprehensive evaluation and the effort it took to write the management plan. There are some things that I am still concerned about which do not appear to be addressed in the Plan, or are not easy to find.

Mature Legacy Forests and Revenue from Timber Sales

I do not see a plan to restore mature growth forests in the plan, only a definition of what an old growth forest is, and some mention of them in the beginning of the Plan. Mature forests, despite the prior Management Plan, have been cut down. I request that Principle 3- Revenue, on Page 1-4 be rewritten. As written, it requires revenue from timber harvest to fund all state forest management activities, and continue to prioritise logging. This does not reflect the responsibility of the Oregon Dept. of Forestry to protect our mature forests or second generation forests, and is in violation of state law. I doubt this would be agreeable to the Tribes, which I question were a part of this conversation topic.

Halt clear cutting of our forests, including stands on the North Coast forests until at least 30% of the trees are healthy and in better condition, as required by current rules and policies.

Protect Endangered Species

The draft Plan does not address the recovery of endangered species related to the clear cutting of timber. I would prefer to see a section on specific strategies, including in the HCP, how the Department of Forestry will recover these species in our state forests.This section should also include how to maintain and protect watersheds, and restore the quality of our waterways for salmon and other aquatic species within the next 10 years.

Climate Plan

Please provide a section that specifically outlines how the Department of Forestry will address climate change. Due to the Department's responsibility to maintain our forests, I would like to see that there is a shift in longer rotations between harvests, reduction of the reliance on large-scale clear-cutting, and the creation of a carbon market program.

Accountability

I would like to see references in the Plan that demonstrates the Department of Forestry has utilised the best science available as per our laws. While reviewing the plan, it was not clear to me that the requirement of all actions has been based on the best science available. I would also like to see a stipulation or section in the draft that requires the Dept. of Forestry to require compliance with all applicable laws, policies, and key performance measures, which have been adopted by the Department, and are not addressed in this draft.

Lastly, please include the Tribes that you have acknowledged in your draft of the Plan. I want to see their input in this Plan and I want to know they have been actively involved in the decisions made by the Department of Forestry and that they are involved in the writing of the

second draft.

Thank you,

--

Changes are needed in Plan are needed.
As written the proposed plan paves the way for more clearcutting in forests, including old growth, resulting in further reducing carbon storage and climate resilience. It doesn't do enough for the 50% of stream impairment in the Clatsop forest.
Take action to insist that the plan ensures state forests are managed to provide the greatest permanent value by increasing carbon storage and climate resilience, reducing greenhouse gas emissions from forest product operations and optimizing forest productivity.

Dear Forestry Department,

Please accept the following comments on the Western State Forest Management Plan.

The governor's recent executive order tasked state agencies with evaluating the climate resilience of Oregon's communities and natural and working lands.

This should include the production of climate friendly building materials that also help meet the governor's housing goals and increase the economic viability of our rural communities.

Wood products are the only building material that stores carbon long term – and state forests should be focusing on contributing to the state's production of lumber! Not only does responsible harvest create lumber, it also employs rural Oregonians with green jobs that support our families.

Please adopt a forest management plan that supports climate smart forestry, including sustainable production of wood products.

Subject: Add Sustainability to the Forestry Management Plan
Date: Friday, December 19, 2025 3:37:11 PM

You don't often get email from scantle@earthlink.net. Learn why this is important

Dear Oregon Department of Forestry,

I strongly urge the ODF to amend the Forestry Management Plan and end clearcutting on mature stands. In this age of diminishing forests and climate change threats, we need to support sustainable harvest methods that protect wildlife, fish and forest habitat.

To do this and restore balance to our state forests, the current draft Forest Management Plan (PMP) should be amended in the following ways:

The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.

Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

I've been lived in and loved the state of Oregon since moving here in 1977. I want our state to live up to its reputation for healthy forests and wildlife. Please make the above changes to ensure we keep

this reputation and preserve our natural forest resources for future generations.

Subject: Adopt a new Forestry Management Plan to support sustainable harvest
Date: Friday, December 26, 2025 1:06:22 PM

You don't often get email from alennams@gmail.com. Learn why this is important

Greetings. I would like to comment on the draft Forest Management Plan (PMP) and express some reservations and suggestions. As we approach the final hours of our ability to to keep Earth functioning properly for ourselves, our future families, and all other life here, it is essential to protect our state forests for the future. Trees do not work on human time and are vulnerable to human greed, misplaced loyalties and shortsightedness. We mismanage at our peril. The draft PMP should be amended in the following ways, these four being the most imperative:

1. Add a requirement for all actions to be based on the best science available, as required under existing law. **Without explicitly stating this, there is surely no backbone to counteract actions based on faulty science** which surely will happen.
2. The draft FMP **must require compliance** with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. **Incorporate these by reference into the FMP.** Without explicitly stating this, humans will work in bad faith to navigate around such things with impunity.
3. Delete - or amend - Principle 3 in the draft FMP which requires revenue from timber harvest to fund all of state forest management activities (has everyone gone mad?) - continuing to prioritize logging over all other values in state forests **in violation of the law.**
4. Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies. There is so little left, and **it will not come back when it's gone, especially if logging interests continue to drive policy**.

These further suggestions are also important to consider. They can help create something robust that might, in years to come, make Oregon into a role model for forest management, habitat conservation, and resilience - as other places fall apart after continued shortsighted policies in their own jurisdictions.

- Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years or less. The time is now.
- Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
- The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you,
Alenna Sebben

- Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
- Mitigate climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program. Logging can be done selectively or in small patches to protect soil carbon which is 40% or more of all forest carbon.
- Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it alone won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Our state forests should place a priority on practicing climate-smart forestry. Climate-smart forestry involves optimizing carbon sequestration, storage and resilience while minimizing greenhouse gas emissions. Practices include protecting our mature and old-growth trees, growing trees longer, and maintaining a diversity of species, ages, and structures.

Western Oregon's state forests—more than 630,000 acres from the crest of the Cascade Mountains to the Oregon Coast—are vital to the survival of wild salmon in Oregon. These public forests also provide clean drinking water to 500,000 residents, habitat for threatened wildlife, recreation, and a tremendous capacity to absorb carbon to mitigate climate change.

While ODF's Climate Change and Carbon Plan calls for growing older trees and setting aside carbon reserves, the draft Western Oregon forest management plan

continues a business-as-usual approach that prioritizes timber sales and revenue over climate-smart forestr

To Whom It May Concern:

I'm old enough to remember the binary, politicised battle in the 80s between the "evil loggers" and the endangered spotted owl. My family's livelihood depended upon the logging industry and I was very much of the opinion that the "environmentalists" I was surrounded by in Eugene were well meaning, but impractical...and that we should never prioritise animals over humans' livelihoods.

With age and many decades of life lived in our beautiful state has come perspective and context. Nothing is binary, hierarchies amongst the living are constructs. I am writing to urge a comprehensive, sustainable forest management plan that prioritises the health and well being of the precious forested habitats that support all of us for generations to come. There is enough to go around. Please consider this lifelong Oregon citizen's voice, along with the following points articulated by the Oregon Bird Alliance:

* Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

*Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

* Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

* Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

* The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Thank you for your work and consideration.

Hi there,

My name is Travis Berge, and I am a lifetime Oregonian and someone who greatly enjoys our state's diverse and unique forests. I was disappointed that the FMP doesn't have more accountability and measure in place to stop the loss complex forest areas that are critical to local species. The new FMP needs stronger action to avoid additional loss of these forest systems. The previous plan did not prevent the loss of complex forest in line with stated goals. Please amend the FMP to include the following features:

The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.

Require accountability: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you for taking steps to improve protections of our forests.

Sincerely,

Travis Berge

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I am a former Oregon Smokejumper at Cave Junction and Redmond. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Subject: Comments on the Forest Management Plan (FMP) and the Protection of Mature Legacy Forests
Date: Thursday, January 01, 2026 1:54:16 PM

You don't often get email from johninem@gmail.com. Learn why this is important

To the Oregon Department of Forestry and the Board of Forestry:

I am writing to express my deep concern regarding the continued clearcutting of mature legacy forest stands within our state forests. To ensure the long-term health of Oregon's ecosystems and economies, the Oregon Department of Forestry (ODF) must adopt a new Forest Management Plan (FMP) that prioritizes sustainable harvest while protecting the imperiled wildlife, fish, and habitat that define our state.

To achieve a balanced and legally compliant management strategy, I urge you to incorporate the following requirements into the FMP:

Base Actions on Best Available Science: The FMP must include a formal requirement that all management actions are based on the best available science, as already necessitated under existing law.

Ensure Accountability: The draft FMP should be amended to require strict compliance with all applicable laws, policies, and key performance measures adopted by the Board of Forestry or the State Legislature. These should be explicitly incorporated by reference to ensure transparency.

Restore Balance to Management Priorities: Principle 3 of the draft FMP must be deleted or amended. Requiring timber revenue to fund all management activities unconstitutionally prioritizes logging over conservation, recreation, and water quality.

Restore Healthy Mature Forests: I request an immediate halt to all clearcut harvesting of complex, layered forest stands on North Coast state forests. Logging in these areas should not resume until a minimum of 30% of the forest meets this "complex" condition, consistent with current rules.

Protect Waterways for Salmon and Communities: ODF must develop restoration plans for watersheds with impaired water quality. The goal must be to restore these waters to levels healthy for salmon and aquatic species within a 10-year period.

Address Climate Change and Resilience: The FMP should actively implement the Climate Change and Carbon Plan. This includes shifting to longer harvest rotations, reducing large-scale clearcutting, and establishing a carbon market program to

monetize carbon sequestration.

Commit to Species Recovery: While the Habitat Conservation Plan (HCP) is a vital baseline to prevent extinction, it is not a recovery plan. The FMP must include specific strategies beyond the HCP to contribute to the actual recovery of the 17 imperiled species currently struggling in our state forests.

Oregonians deserve a management plan that looks beyond short-term timber volume and invests in the climate resilience and biodiversity of our public lands. I look forward to seeing these essential changes reflected in the final FMP.

Sincerely,

Johnine Majchrowicz

To whom it may concern,

Our OR forests are important for clean air, clean water, wildlife and outdoor recreation. Please protect them and restore balance to our state forests by amending the draft Forest Management Plan (PMP) in the following ways:

The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.
● Require accountability: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
● Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
● Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
● Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

thanks,
Abbey Myszka

We should never clearcut mature forests in our state. There is no good reason to do this.
Please delete or amend Principle 3 in the draft FMP. It would require money from timber harvest to fund all of state forest activities, which creates a motive to keep logging above all other values in state forests.
Restore healthy mature forests: halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until at least 30% of the forests are in mature state as required by current rules.
Ensure healthy water for salmon: create forest plans for watersheds with impaired water quality to restore the water to levels healthy for salmon within 10 years (even this is too long to wait for our threatened salmon).
Fight climate change: Find all the ways we can support the Climate Change and Carbon Plan for state forests. Shift to longer rests between harvests and reduce or ban clearcuts.
The FMP should include plans to ensure the recovery of the 17 threatened species trying to survive in our state forests.

In these times we are living in, we are who we've got to ensure our forests are not destroyed in our lifetimes and threatened species survive.
Please think about what you want to sign your name to, for the sake of our children and all who will be here after us.

Friends,

I write because I am a lifelong Oregonian and feel sure that you share my love of this state, its Forests, and its people. I know we can agree that if Oregon is to remain Oregon, we must strike a balance between timber harvesting and care for wildlife within the forest.

To that end, I urge you to amend the FMP in the following ways:

1. Require that the FMP be based on the best available science. THIS IS REQUIRED BY CURRENT LAW.

2. Require compliance with the laws, policies, plans, and key performance measures adopted by the state legislature and the Board of Forestry.

3. DO NOT REQUIRE TIMBER HARVESTS TO FUND ALL STATE FOREST MANAGEMENT activities. We must BALANCE the needs of wildlife and non-logging interests with logging. Please delete Principle 3 in the FMP.

4. HALT CLEARCUT TIMBER HARVEST in the North Coast state forests. Current rules and policies require that clear-cutting complex layered forest occur only after 30 percent of forests are healthy and mature. This is not an unreasonable way to keep our forests intact.

5. Pay attention to our water sheds. The FMP should develop plans for restoring impaired water quality for salmon and other river-dependent wildlife within 10 years.

6. Shift to longer rotations between harvest and reduce large- scale clear-cutting to help implement the Climate Change and Carbon Plan for state forest

7. Include strategies in addition to the HCP to recover 17 imperilled species in our state forests.

These amendments are the key to balancing the interests of timber harvesting with forest protection. The timber industry is important, but it does not own the forests, nor does it have the right to oversee their destruction. These are public lands, and they must be held in trust for those who come after us. Please do your part to protect them.

Thank you for considering my comments.

Sincerely,

Kaye McDonald

You don't often get email from rachmoods12@gmail.com. Learn why this is important

Dear Decision makers,

I am writing to urge immediate action to end clearcutting on mature legacy state forests and to strengthen the draft Forest Management Plan (FMP). Our state forests are irreplaceable public resources that support wildlife, clean water, climate resilience, and community well-being. Current management practices especially large scale clearcutting are undermining these values and placing ecosystems at serious risk.

To protect and restore balance to our state forests, the draft FMP must be amended in the following ways:

First, the Forest Management Plan must be firmly grounded in the best science available. Existing law already requires that forest management actions be based on sound, up-to-date science, and this requirement should be explicitly stated and enforced throughout the FMP.

Second, accountability must be strengthened. The draft FMP should be amended to require full compliance with all applicable laws, policies, plans, and key performance measures adopted by the Board of Forestry or the state legislature. These requirements should be incorporated by reference into the FMP to ensure transparency and enforceability.

Third, balance must be restored to state forest management. Principle 3 of the draft FMP should be deleted or amended. Requiring revenue from timber harvest to fund all state forest management activities continues to prioritize logging over ecological, recreational, cultural, and climate values. This approach violates the law and undermines the purpose of state forests as multi-benefit public lands.

Fourth, healthy mature forests must be restored and protected. All clearcut timber harvest of complex, layered forest stands on North Coast state forests should be halted until at least 30% of the forests meet this condition, as required by current rules and policies. Mature forests are essential for wildlife habitat, carbon storage, and long-term ecosystem stability.

Fifth, the FMP must ensure clean and healthy waterways for salmon and communities. Forest management and restoration plans should be developed for watersheds with impaired water quality, with the goal of restoring water quality to levels that support salmon and other aquatic species within 10 years.

Sixth, the FMP must meaningfully address climate change. Strategies should be added to fully implement the Climate Change and Carbon Plan for state forests. This includes shifting to longer harvest rotations, reducing reliance on large-scale clearcutting, and establishing a carbon market program that recognizes the climate value of standing forests.

Finally, the FMP must commit to the recovery of threatened and endangered species. While the Habitat Conservation Plan (HCP) is a necessary step to prevent local extinction, it is not sufficient to achieve recovery. The FMP should include specific, proactive strategies—beyond

the HCP—to support the recovery of the 17 imperiled species currently struggling to survive in our state forests.

State forests belong to the public and future generations. Ending clearcutting on mature legacy forests and strengthening the Forest Management Plan are critical steps toward protecting wildlife, addressing climate change, and ensuring healthy forests and waterways for years to come. I urge you to act decisively and amend the FMP accordingly.

Thank you for your time and consideration.

Sincerely,

Rachel Moody

To whom it may concern,
I hope you'll consider the following updates to the Forest Management Plan (PMP):
● The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.
● Require accountability: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
● Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
● Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
● Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you for your attention to this matter,
Bryan Brock, PharmD

I strongly encourage the Oregon Department of Forestry to adopt a new Forestry Plan that engages in sustainable harvesting to protect imperiled birds, fish, and other wildlife, and the habitat they need to survive.

To protect and restore balance to our state forests, the draft Forest Management Plan (PMP) should be amended in the following ways:

- The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.
- Require accountability: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
- Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
- Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

It is critical to wildlife and humans to protect and restore balance to our state forests, The draft Forest Management Plan (PMP) should be amended in the following ways:

● The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.
● Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures padopted by the pBoard of Forestry or the state legislature. Incorporate these by reference into the FMP.
● Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
● Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restor water quality to levels healthy for salmon and other aquatic species within 10 years.
● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
● Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state.

I serve on the newsletter outreach of Washington County TreeKeepers through writing, editing, and photography. Through this work I have become more deeply aware of how much wildlife and humans depend on healthy, adequate forests and wooded areas. As a nature enthusiast, I want our state to set high standards for preserving mature trees and forests. I want wildlife to be able to thrive. I want my own physical and mental health to be supported by what mature trees provide for our earth — beauty, cooling, climate regulation, lowered stress, positive mental outlooks, places to breathe in what forests offer. I want this for my children and grandchildren. Mature trees are essential for a good life.

Sincerely,
Dr. Cheryl K Ames

I am writing to urge the Oregon Forest Service to end the of clearcutting on mature legacy state forests in order to protect and restore balance to our state forests.

The draft Forest Management Plan should be amended in the following ways:

- The management plan must require that all actions are based on the best science available, as required under existing law.
- The draft FMP needs to to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature.
- The plan should bring balance back to state forests by deleting or amending Principle 3 in the draft FMP that requires revenue from timber harvest to fund all of state forest management activities. Oregon should not prioritize logging over all other values in state forests.
- Restore healthy mature forests by halting all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- Ensure clean healthy waterways for salmon and communities by managing and restoring watersheds with impaired water quality to levels healthy for salmon and other aquatic species within 10 years.
- Fight climate change and build climate resilience by implementing the Climate Change and Carbon Plan for state forests: shift to longer rotations between harvests, reduce reliance on large-scale clearcutting, and establish a carbon market program.
- Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Please take the necessary steps to protect our forests and the wildlife they are home to - the resources that make Oregon the special place that it is.

Thank you,

Jane Huey
Portland, Oregon

Morning,

I am writing to submit my feedback on the draft Forestry Management Plan. I am in favor of the comments provided by the Bird Alliance of Oren (below) and hope you ’l consider adjustments that further align with our conservation goals while allowing productive use of our state resources. Thank you!

To protect and restore balance to our state forests, the draft Forest Management Plan (PMP) should be amended in the following ways:

- The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.
- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation
- of the law.
- Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
- Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Hello,

I want to urge you to protect and restore our state forests and the various imperiled species that call them home, and especially, to stop clearcutting our mature legacy state forests! We need those forests: for healthy air and water, for ecosystem diversity, for places to go for recreation and renewal, and because we aren't the only species living on this planet and we need to stop acting like we are. This needs to be a higher priority than logging and logging income which utterly destroys our forests.

I am dismayed by how much of the *existing* law that is supposed to protect our forests, gets ignored. That has to stop.

I am in full agreement with the Bird Alliance of Oregon's recommendations for amending the Forest Management Plan, and urge you to follow them. In specific:

● Add a requirement for all actions to be based on the best science available, as required under existing law.

● Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

● Bring balance back to state forests: **Delete or amend Principle 3 in the draft FMP,** which would require revenue from timber harvest to fund all of our state forest management activities, continuing to prioritize logging over all other values in state forests, in violation of the law.

● Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvests, reduce reliance on large-scale clearcutting, and establish a carbon market program.

● Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you,

To whom it may concern,

To protect and restore balance to our state forests, the draft Forest Management Plan (PMP) should be amended in the following ways:

- The FMP must be based on the **best science** available: Add a requirement for all actions to be based on the best science available, as required under existing law.
- Require accountability: Amend the draft FMP to **require compliance** with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
- Bring balance back to state forests: **Delete or amend Principle 3** in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
- **Restore healthy mature forests**: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for **watersheds** with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
- **Fight climate change** and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
- **Commit to the recovery of threatened and endangered species**: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Sincerely,
Catharine Church

You don't often get email from doxiegrrl@mac.com. Learn why this is important

We are out of balance in our state forests. In order to restore balance and protect our forests, the Forest Management Plan draft should be amended in a few ways.

● The FMP has be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law. This is important. There are ways to minimize more damage to our treasured mature forests, along with all the wildlife that calls these forests home.

● Require accountability: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP. What is the point of a plan if it doesn't follow the recommendations already made?

● Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. This is not what Oregonians want, requiring revenue from timber harvest to fund all of state forest management activities, and continuing to prioritize logging over all other values in state forests in violation of the law.

● Restore healthy mature forests: There are already rules in place to halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies. The FMP should follow them.
Why on earth is this not already happening?

● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years. We want a healthy salmon population. It's an incredibly popular fish to eat, and the only food the Southern Resident Killer Whales survive on. They come down to the Oregon coast from Washington sometimes. We have nine indigenous nations here in Oregon. Many consider salmon essential and sacred. What happens when they're gone because we didn't care enough to have healthy waterways for them to thrive.

● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

● Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests. They matter. It's our responsibility to do wht we can to avoid more extinctions.

Thank you for your consideration.

Hello

I am a resident of Eugene OR, a voter, a nurse practitioner and a human who deeply loves our forests and forest creatures. We are woven in relationship and cannot exist without each other. The separation of people from the land and other living beings is the root of all harm because once that tie was severed, nothing was sacred any longer. This led to seeing everything as a "resource" for the taking and has resulted in the mass destruction of this planet & so many living beings.

Below are talking points, written better than I could, but I believe them ti be true.

● The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.

● Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

● Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

● Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

Subject: I urge you to end clear-cutting in state forests
Date: Friday, January 02, 2026 10:10:44 AM

You don't often get email from kimberly.hillman1@gmail.com. Learn why this is important

Hello,

I urge you to immediately cease clear-cutting in state forests of mature trees and believe the Forest Management Plan (PMP) should be amended in the following ways:

The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.

I urge you to Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

We must Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violatio of the law.

It is imperative that we Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

We need to Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

Maintaining forests protects us from climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

You must Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you,

Dr Hillman

Subject: IMMEDIATELY End of Clearcutting on Mature Legacy State Forests
Date: Thursday, December 18, 2025 8:11:46 PM

You don't often get email from dennenberg.hava@gmail.com. Learn why this is important

Dear ODF,

I write to you as a deeply concerned citizen of Oregon and one who cares profoundly for our forests and the wildlife who depend on them for survival. I urge you to be a leader when it comes to honoring the LEGACY that is Oregon; that we care to steward our land, not dishonor it for greed and unscientific approaches. This is **not** the Oregonian way.

A) It is crucial that the FMP be based on the best science available: I urge you to add a requirement for all actions to be based on the best science available, as **required** under existing law.

B) Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

C) Commit to the recovery of **threatened and endangered species**: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

D) I urge that you require accountability: Amend the draft FMP to require **compliance** with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

E) Bring **balance** back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

F) Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

G) Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

Oregon state forests comprise over 600,000 acres of temperate rainforest. The two largest tracts of state forest are the Tillamook and Clatsop on the North Coast. Historically this area provided ample habitat for Northern Spotted Owls and Marbled Murrelets and supported HUGE runs of salmon.

However, after decades of large-scale clearcuts and overharvest, 17 species including 10 fish species, 3 amphibians as well as coastal marten, red tree vole, Northern Spotted Owl and Marbled Murrelets have been pushed to the brink of local extinction. **THIS IS ABSOLUTELY UNACCEPTABLE, particularly for a state that purports to stand for the natural world.**

Mature forests (older than 80 years old) continue to be clear cut despite regulations requiring protection of older legacy forest stands. “Legacy forests” are structurally complex, mature, naturally regenerated forests that have retained traits of the native forests that preceded them.

ODF set a target to retain 30-50% of older forests over a decade ago. Currently less than ***14%*** of mature complex forest is left and continues to be logged. As a result ODF is required to adopt a new Forest Management Plan that is in conformance with the Habitat Conservation Plan (HCP) that the Board of Forestry adopted in 2024. The HCP does represent progress, but it alone won’t result in the recovery of endangered salmon and wildlife populations.

It is BEYOND time for a strong Forest Management Plan!

Respectfully,

Hava Dennenberg

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I use and value Oregon's state forests for recreation, hiking in mature and old-growth forests, mushroom harvesting, wildlife, clean rivers, and other non-extractive uses. For far too long, management of these forests has been dramatically out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians.

The current draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.
In order to restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

1) The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

2) ODF must improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

3) Balance must be brought back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

4) In order to restore healthy mature forests, all clearcut timber harvest of complex layered forest stands on North Coast state forests must be halted, until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

6) Climate change and climate resilience must be incorporated into the management plans. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

6) ODF must commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

I urge you to make these changes to the draft plan and protect Oregon's state forests for our children and future generations.

Thank you for your attention and consideration.

All the best,

Dan Jaffee

Dear ODF,

We need a better, more effective Forest Management Plan.

As you know, more than a decade ago ODF set a target to retain 30-50% of older forests. Yet today, less than 14% of older forests remain, and what is left continues to be logged.

To protect and restore balance to our state forests, the draft Forest Management Plan should be amended in the following ways:

● Add a requirement for all actions to be based on the best science available, as required under existing law.
\
● Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

● Delete or amend Principle 3 in the draft FMP, which requires revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests **in violation of the law**.

● Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

● Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

Bottom line, the draft FMP should simply conform with current state policies and laws, which has too often not been the case in recent years.

Thank you,

Rob Neyer

Hello Oregon Department of Forestry,

Oregon state forests comprise over 600,000 acres of temperate rainforest. The two largest tracts of state forest are the Tillamook and Clatsop on the North Coast. Historically this area provided ample habitat for Northern Spotted Owls and Marbled Murrelets and supported huge runs of salmon.

However, after decades of large-scale clearcuts and overharvest, **17 species** including ten fish species, three amphibians, as well as coastal marten, red tree vole, Northern Spotted Owl and Marbled Murrelets have been **pushed to the brink of local extinction**. Mature forests (older than 80 years old) continue to be clearcut **despite regulations requiring protection** of older legacy forest stands. “Legacy forests” are structurally complex, mature, naturally regenerated forests that have retained traits of the native forests that preceded them.

ODF set a target to retain 30-50% of older forests over a decade ago. Currently **less than 14% of mature complex forest is left and continues to be logged**. As a result ODF is required to adopt a new Forest Management Plan that is in conformance with the Habitat Conservation Plan (HCP) that the Board of Forestry adopted in 2024. The HCP does represent progress, but it alone won’t result in the recovery of endangered salmon and wildlife populations.

It's time for a strong Forest Management Plan! To protect and restore balance to our state forests, the draft Forest Management Plan (PMP) should be amended in the following ways:

- The FMP must be based on the **best science available**: Add a requirement for all actions to be based on the best science available, as required under existing law.
- Require **accountability**: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
- Bring **balance** back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
- **Restore healthy mature forests:** Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- Ensure **clean healthy waterways f**or salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
- **Fight climate change and build climate resilience**: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

- Commit to the **recovery** of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

PLEASE help keep these natural resources, both plant and animal, from slipping further into extinction.

Thank you.

-Martrese Beck

Hi :
Please end the Clearcutting on Mature Legacy State Forests.

To protect and restore balance to our state forests, the draft Forest Management Plan (PMP) should be amended in the following ways:

● The FMP must be based on the best science available,the draft FMP must require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

● Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

● Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

● Fight climate change and build climate resilience: Add strategies to

implement the
Climate Change and Carbon Plan for state forests. Shift to longer rotations between
harvest, reduce reliance on large-scale clearcutting, and establish a carbon market
program.

● Commit to the recovery of threatened and endangered species: The HCP is a
necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, inaddition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forest.

Subject: Please protect imperiled wildlife, fish, and forest habitat through sustainable harvest practices
Date: Thursday, December 18, 2025 2:42:10 PM

You don't often get email from erikahalperin@gmail.com. Learn why this is important

As an Oregon resident, taxpayer, active voter and concerned citizen, I am writing to urge the Oregon Department of Forestry to adopt a **new** Forestry Management Plan which supports sustainable harvest practices that protect imperiled wildlife, fish, and forest habitat. The current draft Forestry Management Plan (FMP) will not suffice. To achieve appropriately protective and sustainable outcomes, please amend the draft Forest Management Plan (PMP) as follows:

- Add a requirement for all actions to be based on the best science available, as required under existing law.
- Incorporate references to, and require compliance with, applicable laws, policies, plans and KPIs adopted by the Board of Forestry or the state legislature.
- Delete or amend Principle 3 in the draft FMP in order to restore balance to our amazing and unique state forests. As it's currently written, it would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
- Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years. Economically, socially, culturally, and ecologically speaking, we cannot AFFORD to continue to endanger our salmon runs!
- Add strategies to implement the Climate Change and Carbon Plan for state forests to fight climate change and build climate resilience. The FMP should require longer rotations between harvest and reduce reliance on large-scale clearcutting.
- Finally, the HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you for addressing all of these points in an updated Forestry Management Plan.

Dear Oregon Department of Forestry,

As an Oregonian, physician, and public and environmental health advocate who treasures our state forests, I strongly urge the ODF to stop clearcutting mature legacy state forests! To protect and restore balance to them, the draft Forest Management Plan (PMP) needs to be amended in the following ways:

- **The FMP must be based on the best science available:** Add a requirement for all actions to be based on the best science available, as required under existing law.
- **Require accountability:** Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference in the FMP.
- **Bring balance back to state forests:** Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
- **Restore healthy mature forests:** Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- **Ensure clean healthy waterways for salmon and communities:** Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
- **Fight climate change and build climate resilience:** Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.
- **Commit to the recovery of threatened and endangered species:** The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Taking these measures will hopefully help ensure our State Forests thrive and are more resilient to the catastrophic impacts of climate change over the coming decades. This will benefit not just the forests and wildlife, but all Oregonians.

Sincerely,
Jenny Pompilio MD, MPH

Subject: STOP Clearcutting Mature Legacy State Forests
Date: Thursday, December 18, 2025 2:08:05 PM

You don't often get email from geconn@gmail.com. Learn why this is important

To Whom It May Concern:

I'm writing to you today with regard to the current draft of the Forest Management Plan. Oregon state forests comprise over 600,000 acres of temperate rainforest. The two largest tracts of state forest are the Tillamook and Clatsop on the North Coast. Historically this area provided ample habitat for Northern Spotted Owls and Marbled Murrelets and supported huge runs of salmon.

However, after decades of large-scale clearcuts and overharvest, 17 species including 10 fish species, 3 amphibians as well as coastal marten, red tree vole, Northern Spotted Owl and Marbled Murrelets have been pushed to the brink of local extinction. Mature forests (older than 80 years old) continue to be clearcut despite regulations requiring protection of older legacy forest stands. “Legacy forests” are structurally complex, mature, naturally regenerated forests that have retained traits of the native forests that preceded them.

ODF set a target to retain 30-50% of older forests over a decade ago. Currently less than 14% of mature complex forest is left and continues to be logged. As a result ODF is required to adopt a new Forest Management Plan that is in conformance with the Habitat Conservation Plan (HCP) that the Board of Forestry adopted in 2024. The HCP does represent progress, but it alone won’t result in the recovery of endangered salmon and wildlife populations.

With all that in mind, I'm encouraging decision-makers to amend the draft of the Forest Management Plan (FMP) and PROTECT and RESTORE balance to our state forests by accomplishing by accomplishing the following:

- **The FMP must be based on the best science available**: Add a requirement for all actions to be based on the best science available, as required under existing law.
- **Require accountability**: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.
- **Bring balance back to state forests**: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.
- **Restore healthy mature forests**: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.
- **Ensure clean healthy waterways for salmon and communities**: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.
- **Fight climate change and build climate resilience**: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

- **Commit to the recovery of threatened and endangered species**: The HCP is a

necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

As a voter, an Oregonian, and as someone concerned about the long-term effects of a bad FMP, I strongly urge you to consider these points and adopting them across the board.

The Northern Spotted Owl is critically endangered. Its home, its only home, is old growth forest. Currently, there are plans to destroy upwards of one million Barred Owls across the country because they are an invasive species that is encroaching on the Spotted Owl territories. What is the point of this senseless slaughter if there's NO HOME for the Spotted Owl anyway? What's the point of establishing a conservation plan if you have no intention of honoring it? True forest management looks at all aspects and does the best it can for as many species as it can. The plan as it stands does NOT accomplish this.

Please make a better choice. Extinct is forever.

Sincerely,

Gena Connelly

Hello,

I support and urge the ODF staff to support, protect and restore balance to our state forests, the draft Forest
Management Plan (FMP) should be amended in the following ways:

● The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.

● Require accountability: Amend the draft FMP to require compliance with applicable laws,policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

● Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

● Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

● Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

● Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program.

● Commit to the recovery of threatened and endangered species: The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

All of these amendments will help regenerate forests and protect the imperiled species clinging to survival of their habitats. We depend on biodiversity in the forests to protect our watershed and salmon, which we humans depend on.

Please urgently consider supporting these amendments to the FMP. I appreciate your consideration.

With Gratitude,

Lea

[You don't often get email from bbucknam@everyactioncustom.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Brian Bucknam

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Kyle Haines

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,

Dear Chair Kelly and Members of the Board of Forestry,

I write to you in hopes that my children and my children's children and their children will all get to see and experience the true beauty of Oregon forests as I have been able to do so in my lifetime. Some of my happiest childhood memories were exploring the forests with my family. I grew up in rural Oregon so a forest was never far. As an adult I have traveled to the majority of states in our country at one point or another and have seen first hand what Oregon has when compared to the rest of the country's landscape. We have something wonderful and amazing. The forests, rivers, animals, plants, trees, and overall environment and habitat here are truly something worth saving and something worth fighting for. I have learned more spending a day in a forest then I could ever learn in an open prairie, desert, swamp, or rolling hills area. I want my children to not only know the beauty but the smell and the feeling you get from watching a fern unroll to learn about the different kinds of moss and all the amazing creatures and trees we have. To be able to pick a wild huckleberry and taste it right there. Consider my request not for me or for my descendants alone, but for all future Oregonians. Keep Oregon Green . Thank you,
Laurel Bronnenberg

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Laurel Bronnenberg

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

I AM ESPECIALLY CONCERNED ABOUT CLEAR CUTTING AS A METHOD Of FORESTRY MANAGEMENT. IT SHOULD BE PHASED OUT AND EVENTUALLY PROHIBITED ENTIRELY, ESPECIALLY IN EXISTING STANDS OF MATURE FORESTS.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Ardis Letey

The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Allison Everitt

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
John Howard

Dear Chair Kelly and Members of the Board of Forestry,

I am writing as a health care provider who sits on the board of a nonprofit dedicated to the health of our clients through reducing the harmful health effects of climate change. Clear cutting mature forests is not sound policy to protect the health of humans and the planet in general. Diversity and carbon sinking provided by forests help to maintain our health.
Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Carla Behrens

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change. Oregon needs to be proactive about this and not waiver.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Nancy PHILLIPS

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,

Dear Chair Kelly and Members of the Board of Forestry,

I appreciate your work on the Habitat Conservation Plan (HCP) for western Oregon state forests. I am reaching out to encourage you to adopt a new forest management plan for all of Oregon's state forests and to include proactive measures to address climate change.

Our state's forests have been overharvested and damaged by clearcutting. For the health of our forests and the creatures who call it home, as well as to fight climate change, it is vital that we focus on restoring habitat and protecting clean water. We should prohibit harvests within established conservation areas, but we should also ensure that forests outside these protected areas are also treated with respect, not private industrial forests. By this I mean putting an end to clearcutting practices. I also encourage you to implement buffers near waterways to protect clean water, keep water temperatures down, and reduce sedimentation in streams, creeks, and rivers. We should also institute measures to protect existing stands of mature forests and require longer rotations between harvests. This would help increase carbon storage in our forests.

Sincerely,
Martin Fisher

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Donna Grubbs

Dear Chair Kelly and Members of the Board of Forestry,

***As a former resident of Oregon, I urge you to recognize that our state forests are hold vastly more value to Oregon standing, as wellsprings of biodiversity, watershed, and aesthetic value, than any amount of lumber that could ever be, or has ever been, extracted from them. The past behavior of the Department of Forestry has squandered much of this value, by clinging to a grossly erroneous and professionally cloistered view of our forests as mere lumber sales in waiting. I urge you to close the chapter on this era, and to establish the controlling principle that these forests have a primary right to exist, Oregonians a right to enjoy their existence, and the world a right to the survival of these forests amid a global mass extinction that leaves life itself with precious few such sanctuaries.

These ecological, moral, and public trust objectives should not be subordinated to any antiquated, arbitrary arrangement for monetizing the forest as a funding source for county or municipality. Oregon is a wealthy state, with ample resources for funding such governments, and there is no rational grounds for this linkage beyond a perfunctory convenience from generations ago, and their entrenched heirs in the timber-political complex, that now clash severely with the interests of every other human being. The biological facts before us demand that our state forests be reassigned to a status of protection and stewardship, with commercial logging confined only to scientifically validated restoration activities that promote old-growth succession.***

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Gregory Ellsworth

Dear Chair Kelly and Members of the Board of Forestry,

Please continue the good work begun with the Habitat Conservation Plan for western Oregon state forests. Now we need a strong HCP and Climate Plan with proactive measures to address climate change.

The new forest management plan must be supported by the best science available to increase protective stream buffers on headwater streams and increase carbon absorption and storage in our state forests. This can be achieved by STOPPING clearcut timber harvest, PROTECTING mature stands of forest, and establishing SIGNIFICANTLY LONGER ROTATIONS between harvest to increase carbon storage.

I strongly support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Stand tall for Oregon’s state forests with a strong HCP and a stronger forest management plan.

Sincerely,
Peg Herring

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Annmarie Celano

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. My priorities as a voter and 4th generation Oregonian are:

1. Make sure to address climate change in your plan.

2. Stop clear cutting and over-harvesting.

3. Protect salmon runs, wildlife, and watersheds.

4. Manage forests with a focus on the environment, the habitat, and the greater and longterm good, NOT REVENUE.

I will be paying attention. This matters deeply to me and all living beings in the West. Make sure you do what is right, not just what will make rich people richer.

Sincerely,
Lana Graff

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Ramsay Weit

Dear Chair Kelly and Members of the Board of Forestry,

Re: HCP and CC& C Plans

Thank you for your work to adopt a new forest management plan for Oregon's Western state forests. I urge you to include strong proactive measures to address our increasingly serious issues created by climate changes.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests, and for current and future generations, by adopting a strong HCP and a new forest management plan.

I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Craig Marburger

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Josie Hanneman

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Hannah Joseph

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Lynn Longan

This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Jay Humphrey

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Dear Chair Kelly and Members of the Board of Forestry,

Thank you for supporting the completion of a Habitat Conservation Plan (HCP) for Western Oregon state forests. I'm writing to ask you to continue this work by adopting a new forest management plan for Oregon's state forests. This includes implementing a strong HCP and the Climate Change and Carbon Plan (Climate Plan), adopted by the Board of Forestry in 2021, with proactive measures to address climate change.

The HCP will begin to restore balance to our state forests after decades of clearcuts and over-harvest. The HCP will protect iconic salmon runs, wildlife habitat, recreation, and clean water by limiting or prohibiting timber harvest within established conservation areas. However, the remainder of state forest should not be managed like private industrial forest land with short harvest rotations that maximize revenue.

The new forest management plan must be supported by the best science available, to meet the challenges posed by climate change. This includes increasing protective stream buffers on headwater streams to protect cold clean water for salmon, and implementing the Climate Plan to increase carbon absorption and storage in our state forests. This can be achieved by reducing clear cut timber harvest, protecting existing mature stands of forest, applying ecological forest management practices, and establishing longer rotations between harvest to increase carbon storage.

The HCP and new forest management plan would continue to produce revenue from state forest timber sales to fund the Department of Forestry and county services, but this is an unreliable and unsustainable approach. I support efforts to diversify revenue sources for both the Department of Forestry and local services, to relieve the pressure to over-harvest public forests and provide more stable funding.

Now is the time to stand tall for Oregon's state forests,and for current and future generations, by adopting a strong HCP and a new forest management plan.

Sincerely,
Nancy Fleming

ODF

To protect and restore balance to our state forests, the draft Forest Management Plan (FMP) should be amended in the following ways:

Add a requirement for all actions to be based on the best science available, as required under existing law.

Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by
the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Delete or amend the draft FMP which requires revenue from timber harvest to fund all of state forest management activities, which prioritizes logging over all other values in state forests.

Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within 10 years.

Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting, and establish a carbon market program. Logging can be done selectively or in small patches to protect soil carbon which is 40% or more of all forest carbon.

The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it alone won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to survival in our state forests.

Our state forests should place a priority on practicing climate-smart forestry. Climate-smart forestry involves optimizing carbon sequestration, storage and resilience while minimizing greenhouse gas emissions. Practices include protecting our mature and old-growth trees, growing trees longer, and maintaining a diversity of species, ages, and structures.

Western Oregon's state forests—more than 630,000 acres from the crest of the Cascade Mountains to the Oregon Coast—are vital to the survival of wild salmon in Oregon. These public forests also provide clean drinking water to 500,000 residents, habitat for threatened wildlife, recreation, and a tremendous capacity to absorb carbon to mitigate climate change. While ODF's Climate Change and Carbon Plan calls for growing older trees and setting aside carbon reserves, the draft Western Oregon forest management plan
continues a business-as-usual approach that prioritizes timber sales and revenue over climate-

smart forestry.

Thank you

Subject: Comments on the Draft Forest Management Plan
Date: Friday, January 09, 2026 9:36:53 AM

[You don't often get email from haloegrace@gmail.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear ODF Staff,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation and scenic vistas. For too long, management of these forests has been out of balance, favoring industrial-scale clearcutting and timber revenue over multiple values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring ecosystems, improving water quality and the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its rules and legislatively adopted key performance measures that require protection and enhancement of older mature forests. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is a great place to start this paradigm shift toward accountability.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan.

The FMP must be based on the best science available. Add a requirement for all actions to be based on the best science available, as required under existing law.

Improve accountability by amending the draft FMP to require compliance with applicable laws, policies, plans and performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

Bring balance back to state forests by deleting or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of the law.

Restore healthy mature forests: Halt all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy watersheds for salmon and communities. Develop forest management and restoration plans for watersheds with impaired water quality. Restore water quality to levels healthy for salmon and other aquatic species within 10 year.

Fight climate change and build climate resilience. Add strategies to implement the Climate Change and Carbon Plan for state forests. Shift to longer rotations between harvest, reduce reliance on large-scale clearcutting and establish a carbon market program.

Commit to the recovery of threatened and endangered species. The HCP is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting the state forests for our children and

future generations.

Subject:	Don"t leave rural Oregon behind
Date:	Tuesday, January 27, 2026 8:31:56 AM

Dear Forestry Department,

Thank you for the opportunity to provide input on the Western State Forest Management Plan.

I strongly encourage the Department to adopt a plan that prioritizes the needs of working forests and the rural communities that depend on them.

For the sake of balanced stewardship, financial stability, and the long-term health of Oregon's forests and rural communities, it is vital the Department move forward with a plan that emphasizes strong economic performance.

A substantial portion of state forestland has already been dedicated to wildlife habitat, and the Department's own projections show these areas will more than meet environmental objectives. Further restrictions are unwarranted.

With these conservation commitments already secured, the focus should now shift toward ensuring sustainable economic outcomes. Countless families and timber-reliant communities depend on responsible forest operations for steady jobs and economic stability.

Additionally, revenues from state forest harvests are vital for counties, schools and local taxing districts. Curtailing timber production threatens their ability to deliver essential public services and undermines the Department's requirement to remain financially self-supporting. ODF must continue generating the revenue needed to operate without shifting costs to taxpayers.

It is important that the Department resist ongoing pressure from anti-forestry groups seeking additional limitations that are neither necessary nor balanced.

Thank you for your consideration.

Dear Forestry Department,

Thank you for the opportunity to submit comments on the Western State Forest Management Plan.

The Department of Forestry is tasked with managing state forests for Greatest Permanent Value, which includes a balance between environmental, social and economic outcomes.

The state's Habitat Conservation Plan definitively checks the environmental and social boxes. Those goals have been thoroughly met. There is absolutely no need to consider additional restrictions on harvest.

Instead, the management plan should focus on active forest management and meeting the third goal of GPV: economics.

That will not compromise other goals. Responsible harvests strengthen forest health, reduce disease and wildfire risk and support restoration activities — all while sustaining Oregon's rural economies and the Department's own budget.

Thank you for the opportunity to comment.

You don't often get email from contact@advocatevoice.com. Learn why this is important

Dear Forestry Department,

As you are considering comments on the Western State Forest Management Plan, disregard calls by special interest groups to lock up more of our state forests.

Enough already. They clearly don't understand the definition of balance; they will only be satisfied when every acre of Oregon's forests is off-limits to timber harvest.

Despite the fact that the Board of Forestry advanced a Habitat Conservation Plan that delivers an abundance of wildlife habitat and protections for at risk species, they continue to assert it's not enough. Because it will never be enough for them.

Now is the time to deliver on outcomes for the rest of Oregonians who depend on timber harvests for the health of our rural communities. We can have responsible timber harvests while protecting the environment – this is what Oregon does best.

Please develop a management plan that demonstrates to us that rural communities are important, too. Please, apply the lense of being any kind of farmer to your plan. Would you vote to do the same to wheat farmers? Blueberry farmers, etc? Trees are simply a crop that need to be grown sustainably for our air, our livelihoods, and our future. Follow the science! Don't tie up forest lands just to rot. Think if you did the same to pumpkin farms.
Thank you.

Dear Forestry Department,

DEAR LAWMAKERS. It is time to take care of our state lands by harvesting, cleaning under growth and replanting burned areas in our state forests. We need to use our natural resources by logging and replanting. Please manage our forest, don't just lock them up. We will all benifit from replanting burned and harvested areas of our Western State Forest. Management Plan, disregard calls by special interest groups to lock up more of our state forests.

Enough already. They clearly don't understand the definition of balance; they will only be satisfied when every acre of Oregon's forests is off-limits to timber harvest.

Despite the fact that the Board of Forestry advanced a Habitat Conservation Plan that delivers an abundance of wildlife habitat and protections for at risk species, they continue to assert it's not enough. Because it will never be enough for them.

Now is the time to deliver on outcomes for the rest of Oregonians who depend on timber harvests for the health of our

Sincerely,

Vanessa Keys

The ODF timber sale program is immensely important to me as it is how I make a living, but also how generations before me did so as well. Rural communities and local contractors depend on the jobs that a successful timber sale program creates through a constant and sustainable supply of timber. Foresters, loggers, road builders, truck drivers, mill employees, and construction companies are just a few examples of the professions that rely on a constant and sustainable timber supply. It is essential that we set the highest sustainable harvest levels for the FMP to support the workforce, communities and schools. The rural communities and schools rely on the funding from the timber receipts. I went to a school that received these timber receipts growing up, and they still rely on this funding today. Through harvesting renewable resources, we can truly give back to these communities and schools who do need support from the timber program. It is time we prioritize our school and youth to give them the best resources possible to be successful, and a successful timber sale program is a direct answer to these needs, not limiting the land base and harvest targets going forward.

Thank you,
Tanner Olson

I am submitting my testimony in strong opposition to the current draft forest management plan.
I have lived in Oregon my entire life. I have enjoyed every aspect of this beautiful state. When I was a young there were no closed roads. I could visit any place wanted. The forests were logged and rural Oregon thrived on the money generated by this logging. There was an abundance of Deer, Elk, Game birds and fish. Now I am old. You are closing roads so I can no longer go to places I could walk to when I was young. I can no longer walk like I used to and now I can't even drive to them because you are closing roads.
The forests were lush and green. Now they are over grown with brush and briers. There were very few forest fires and if there was one it was small and put out right away. Now every year there are massive forest fires. Some are allowed to burn (the bedrock fire comes to mind). Then after the fires have destroyed the forest no one is allowed to come in an harvest the marketable timber. The timber sits on the forest floor to rot and fuel future fires. Note it is hard to fight a forest fire with no roads. These fires kill wildlife and endangered species. The air we breathe in the summer is so polluted by smoke it makes marginal health people stay indoors.

The economy of our rural cities has taken a terrible down turn because the forests are locked up.

I could go on and on with detrimental forest practices Oregon is using. Why don't you start running ODF like a business out to make a profit. I am very disappointed in the way I've seen our forest decline since I was a young man. Please allow more logging, open the roads and let people enjoy Oregon.

Sincerely

Tim Baker

Dear Mr. Butteris,

Please keep Oregon state forests as working forests. These lands should keep providing wood products, family wage jobs, and support for rural communities. Timber revenue also helps fund local services.

Please restore balance and avoid new, unnecessary regulations and operational complexities. Forest operators and loggers already work alongside ODF under strong environmental regulations and requirements. More limits on harvest and management will hurt rural communities and will not match the state's duty to manage for Greatest Permanent Value for all Oregonians.

Please support active, sustainable forestry and keep ODF financially stable. Active management improves forest health, supports climate-friendly wood products, and helps ODF stay financially self-sufficient without shifting costs to taxpayers. A plan that makes harvest less predictable will also make it harder for contractors and mills to keep workers employed.

Studies tied to the plan show scenarios with legal, sustainable harvest that maximize volume and net present value (NPV) lead to the greatest support to jobs and workforce development and the strongest local economies, while still meeting the goals and strategies of the plan and the companion HCP. Without loggers, forest contractors, and service providers, ODF cannot meet its goals on the ground.

Forest operators are on the land every day. We are extra eyes and ears during fire season. Many of us also provide equipment and skilled help during wildfire response. Loggers are firefighters, and we are a key part of a complete and coordinated wildfire suppression system.

Finally, please use practical, science-based forestry tools. In Douglas-fir forests, clearcut harvest is a sustainable silvicultural method because Douglas-fir needs full sunlight to regenerate well. Outside habitat conservation areas and riparian conservation areas, the remaining harvest acres must carry a larger share of planned volume so ODF can meet Greatest Permanent Value across the full landscape.

Thank you for considering my comments and for your work managing Oregon's state forests.

Sincerely,

Rick Kriege

My name is Mark Villers and I am the president of Blue Ridge Timber Cutting, Inc. and I would like to comment on the Western Oregon State Forest Management Plan. I have been working on state forest land for 40 years. Originally as a timber faller and for the last almost 30 years as a stream restoration contractor. I want to comment on the value of state owned forest land to our rural communities for timber and the jobs that go along with that, also to their value to fish and wildlife.

I have placed thousands of boulders and logs in the West Fork Millicoma River watershed in the Elliot State Forest for over two decades, and now that watershed has some of the highest coho salmon spawner return numbers in the state. This work was done at a time when the forest was being actively managed for timber production. Often our work was connected to logging operations. On many occasions the logging plan included logs dedicated to be placed in the stream or boulders created from road construction which were used in engineered log jams in the river. I just wanted to point out the symbiotic relationship between a working forest and fish and wildlife. They do not have to be mutually exclusive as so many people think. Please keep State Forest Land productive for timber and fish.

Thank you,
Mark Villers

- Dear ODF,
- I am a native Oregonian and Oregon has always used our natural resources such as our timber forests to provide jobs and support the local economies for Oregon residents. Responsible harvest of timber needs to be restored for the sake of our unemployed citizens.
- Reduce regulations that strangle growth and prosperity for our state.
- **Maintain Working Forests & Support Rural Communities:** State forests must remain working forests that provide jobs, sustain rural economies and fund local governments and schools.
- **Restore Balance & Reject Unnecessary Restrictions:** Current management already exceeds environmental requirements; additional restrictions are unwarranted, harmful to communities and inconsistent with the balanced mandate of Greatest Permanent Value.
- **Promote Sustainable Forestry & Ensure ODF Financial Stability:** Active management supports forest health, provides climate-friendly wood products and is essential for ODF to remain financially self-sufficient without burdening taxpayers.

Dear Forestry Department,

As you are considering comments on the Western State Forest Management Plan, disregard calls by special interest groups to lock up more of our state forests.

Enough already. They clearly don't understand the definition of balance; they will only be satisfied when every acre of Oregon's forests is off-limits to timber harvest.

Despite the fact that the Board of Forestry advanced a Habitat Conservation Plan that delivers an abundance of wildlife habitat and protections for at risk species, they continue to assert it's not enough. Because it will never be enough for them.

Now is the time to deliver on outcomes for the rest of Oregonians who depend on timber harvests for the health of our rural communities. We can have responsible timber harvests while protecting the environment – this is what Oregon does best.

Please develop a management plan that demonstrates to us that rural communities are important, too.
Thank you.

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan.
I urge the Department to advance a management plan that supports working forests and rural communities. Please do not give in to anti-forestry activists' insatiable demands for more restrictions.
Over half of state forests have already been set aside for wildlife habitat and the Department's own modeling demonstrates those acres will over-deliver on environmental outcomes. Enough is enough.
Now is the time to focus on economic outcomes that will not compromise conservation goals already in place. Timber-dependent communities and families rely on these forests for stable employment and economic vitality.
Counties, taxing districts and schools depend on revenue from state forests for their budgets. Reductions in timber harvests not only jeopardize their ability to provide crucial services to their communities but also jeopardize the Department's self-sufficiency. ODF must generate revenue to sustain operations without burdening taxpayers.
For the sake of balanced management, fiscal responsibility and the long-term vitality of Oregon's forests and communities, please advance a forest management plan that focuses on economic outcomes.
Thank you for your time and consideration.

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan.
I urge the Department to advance a management plan that supports working forests and rural communities. Please do not give in to anti-forestry activists' insatiable demands for more restrictions.
Over half of state forests have already been set aside for wildlife habitat and the Department's own modeling demonstrates those acres will over-deliver on environmental outcomes. Enough is enough.
Now is the time to focus on economic outcomes that will not compromise conservation goals already in place. Timber-dependent communities and families rely on these forests for stable employment and economic vitality.
Counties, taxing districts and schools depend on revenue from state forests for their budgets. Reductions in timber harvests not only jeopardize their ability to provide crucial services to their communities but also jeopardize the Department's self-sufficiency. ODF must generate revenue to sustain operations without burdening taxpayers.
For the sake of balanced management, fiscal responsibility and the long-term vitality of Oregon's forests and communities, please advance a forest management plan that focuses on economic outcomes.
Thank you for your time and consideration.

Sincerely,

Stacey E. Bowman

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan.

Oregon's mandate for managing state forests is clear: Greatest Permanent Value requires a balanced approach that accounts equally for environmental, social, and economic benefits. In recent years, that balance has tilted heavily toward environmental and social objectives.

With the Habitat Conservation Plan, those objectives have been fully addressed. The HCP provides expansive habitat protections and long-term conservation certainty. Because these goals are already met, additional harvest restrictions are unnecessary and would only deepen the existing imbalance.

The management plan should now turn its attention to the third pillar of GPV - economic outcomes - by restoring active forest management. Responsible, well-planned harvests improve forest health, reduce susceptibility to disease and wildfire and support critical restoration work. At the same time, they provide dependable jobs, strengthen rural economies and ensure the Department can fund its own operations without shifting burdens to taxpayers.

Rebalancing Oregon's state forest management is essential to achieving true GPV. I encourage the Department to advance a plan that recognizes the equal importance of economic vitality alongside environmental and social stewardship.

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan. Stagnate overstocked forests don't sequestered as much carbon as healthy managed forests. Go to the Elliot Forest and start cutting on a sustained yield and send the money to the school fund where it belongs and maybe the governor will quit screaming about needing more money for schools.

Dear Forestry Department,

Please accept the following comments on the Western State Forest Management Plan.

The governor's recent executive order tasked state agencies with evaluating the climate resilience of Oregon's communities and natural and working lands.

This should include the production of climate friendly building materials that also help meet the governor's housing goals and increase the economic viability of our rural communities.

Wood products are the only building material that stores carbon long term – and state forests should be focusing on contributing to the state's production of lumber! Not only does responsible harvest create lumber, it also employs rural Oregonians with green jobs that support our families.

Please adopt a forest management plan that supports climate smart forestry, including sustainable production of wood products.

Dear Forestry Department,

Thank you for the opportunity to submit comments on the Western State Forest Management Plan.

The Department of Forestry is tasked with managing state forests for Greatest Permanent Value, which includes a balance between environmental, social and economic outcomes.

The state's Habitat Conservation Plan definitively checks the environmental and social boxes. Those goals have been thoroughly met. There is absolutely no need to consider additional restrictions on harvest.

Instead, the management plan should focus on active forest management and meeting the third goal of GPV: economics.

That will not compromise other goals. Responsible harvests strengthen forest health, reduce disease and wildfire risk and support restoration activities — all while sustaining Oregon's rural economies and the Department's own budget.

Thank you for the opportunity to comment.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Chris Aldrich

Dear Oregon Department of Forestry,

Like most Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

MOSTLY, I CARE ABOUT THE FUTURE OF OUR CHILDREN AND LEAVING THEM A WORLD WITH BREATHABLE AIR AND CLEAN WATER! WE NEED TO TAKE EVERY STEP WE CAN TO ASSURE A LIVABLE WORLD FOR THE NEXT GENERATIONS!

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

THINK OF THE WORLD WE ARE LEAVING OUR CHILDREN!

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a

necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you for reading this.

Sincerely,
Marilyn O'Malley

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Michelle VanCromphaut

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Jack Dodson

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Dear Oregon Department of Forestry,

At this critical point in human history, we are at a crossroads: Do we preserve and protect our forests that are important wildlife habitat and provide many ecosystem services OR do we cave to the greed of the logging industry as has been done in the past?

I am writing to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these

species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. I have been campaigning to protect mature forests since 1977. It is painful to see, all these years later, that governments have not learned the basic lesson that standing mature trees are far more valuable than the cash generated by their destruction. And now we have the matter of climate change to consider. The single most powerful antidote to climate change is - mature forests. To cut those forests for cash is utterly counterproductive We need those trees to remain standing to ameliorate climate change. Have you considered that?

I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Robin Swanson

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

Dear Oregon Department of Forestry,

In the mid-1970's I worked for several years with the Hoedads Tree Planting Co-op. I, myself, have planted half a million trees. With 250 Hoedad members, we planted a significatn amount of trees on logged units in the Pacific Northwest. Some of those units are now being harvested.

Please re-consider not cutting legacy old growth timber. There is nothing we can get from those forests that can't be obtained in re-planting and harvesting re-planted units. There is a lot to lose in harvesting old growth forests. Y'all work in places where you know what's at stake first hand.

As a daughter of Oregon Pioneers, I have had a long and loving relationship with our forests. We need the legacy of protection for the wild habitats. Those are not ours to use wantonly. The state is the cartaker for maintaing balance in our forests. Please do this through an ecological approach to forest management. Allow my daughter and granddaughters to carry on the love and protection for our natural forest lands.

Sincerely,
Darlene Colborn

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians.

The draft Forest Management Plan could restore rational, long term values to the management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 50% of the forests are in this condition, as required by current rules and policies.

- Reduce industrial logging to prevent landslides and the heating / drying that leads to wildfires.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek's Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Susan Ostlie

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management Plan for Western Oregon State Forests. I am a third generation Oregonian, a parent, owner and steward of a small forest outside of Elmira, and also a wildlife biologist. I cherish our state forests for recreation, solace, foraging, and fun.

Like most Oregonians, I care deeply about our state forests for the wildlife they support, clean cold rivers, recreation, and the natural beauty they provide. For too long, forest management has been out of balance, with industrial clearcutting and timber revenue taking priority over the many other values these forests provide. This draft plan is a real opportunity to course-correct by focusing on ecological forest management, repairing damaged ecosystems, improving water quality, and helping at-risk species recover.

For more than a decade, the Oregon Department of Forestry has failed to follow its own rules - especially those requiring protection and development of older, more complex forests. Moving forward, state forests must be managed in compliance with existing laws and policies. This draft plan should mark a clear shift toward accountability.

To restore balance and responsible management, I urge you to make the following changes to the draft plan:

-Require all forest management decisions to be based on the best available science.

-Clearly require compliance with all applicable laws, policies, and performance measures adopted by the legislature and Board of Forestry.

-Revise or remove Principle 3, which continues to prioritize timber revenue over other forest values by requiring logging to fund all state forest management.

-Stop clearcutting complex, mature forest stands on the North Coast until at least 30% of the forest meets mature forest conditions, as current rules already require.

-Develop restoration plans for watersheds with impaired water quality so rivers can support salmon and provide safe drinking water within the next decade.

-Include clear strategies to address climate change, including longer harvest rotations and reduced reliance on large-scale clearcutting, consistent with the state's climate commitments.

-Go beyond the Habitat Conservation Plan by including specific actions to help recover the 17 threatened and endangered species that depend on state forests.

Thank you for taking these recommendations seriously and for working to protect Oregon's state forests for the long term.

Sincerely,
Shalynn Pack
Junction City, OR 97448-8517

Dear Oregon Department of Forestry,

I am a retired biologist living in Bend and I spend a lot of time hiking on the Oregon coast. I am very concerned about the clearcutting of Oregon's west side forests. I spent much of my childhood in the deep shade of coastal redwood forests in California.

My concern is that logging mature trees and clearcutting in the west side forests will remove the habitat for a diverse array of species, increase erosion and loss of water retention and decrease the cooling shade provided by forest canopy. The wet forests of the Pacific states also provide great benefits of climate amelioration and water cycling. With mature tree logging and clearcutting, adjacent areas become drier, heat stressed and more susceptible to severe wildfire or insect damage.

One could think that increasing logging could decrease the chance of wildfires. The opposite would occur. Increasing logging and bulldozing roads opens sun penetration and creates dryer conditions and higher wind speeds that increase wildfire risk.

If the mature trees are allowed to continue to grow, their bark thickens, giving them a natural resistance to wildfires, fortifying the overall resilience of the forest. Old-growth stands are often cooler, holding moisture that can moderate wildfire behaviour, and help wildlife find refuge from extreme heat during the height of summer.

Our mature and old-growth trees and forests are worth more standing. They capture and purify fresh water and continuously remove disproportionately large amounts of CO2 from our atmosphere, storing the carbon in their branches, trunks and roots while they provide habitat and refuge for wildlife.

Please do not let the profits, for a few, derived from logging destroy the outstanding benefits for millions of organisms, including humans, that standing mature forests provide.

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek's Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Dear Oregon Department of Forestry,

Hello and thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. I know that you all want to do the right thing and that you love the forests as much as we do. Protecting the little complex layered forest stands, old growth and legacy forests for the youngsters is the absolute least we can do! I appreciate your time and attention to this and for requesting comments from Oregonians.

As I am sure you can guess, I value state forests - mostly for the serenity and pleasure I feel spending time in nature with natural silence and the trees all around. Of course, the fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas are a draw too for myself and most other state forest visitors.

For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Debbie Kappel

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Paul Steege

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

My comment is this: In places that I know about and have visited personally, forests that have been cut down never

renew themselves. Such renewal requires more active stewardship than what is usually done. Let's choose differently for our beautiful state! Let's choose to take action while we have old growth lands, even 14%. We will not regret it.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. As an avid hiker and someone who loves to visit the PNW, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians and Americans as a whole. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

There should be no logging of any old growth trees. Full stop.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Leslie Shimmin

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Jill Schwab

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.I am a high school student at a local high school, and I am the co-president of an environmental club at my school. I have been passionate about the protection of our forests and our climate in Oregon since I was an early elementary schooler. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Judy Rees

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians.

When I studied silviculture clearcutting was treated as a harvest option for use in "optimal conditions." We have very few such areas in Oregon, yet that has become the dominant, nearly default option for most forest harvests. St3ep hills, rugged terrain, and thin soils in many places in Oregon are now showing the huge negative impacts of scraping landscapes bare. Impacts on soil, water, air and wildlife can continue for decades after a clearcut.

The draft Forest Management Plan is an opportunity to restore balanced mannt to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

Dear Oregon Department of Forestry,

I am a student at a local high school. As an Oregonian the forest are very important to me because the forest has always been a safe and peaceful space not only to me but the wildlife that live there.
This bill is going to be very impactful to our states future and well being. I understand logging's economical purpose, but I believe we should prioritize the safety of Oregon's beautiful wild life and plants. Our forest make up Oregon's identity and I believe that we should embrace the gift of our natural land.
Thank you for reading and please consider putting the safety of our forest first.

Dear Oregon Department of Forestry,

Re: Draft Forest Management Plan for Western Oregon State Forests.

Oregon' state forests are important and beloved for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has heavily favored clearcutting and timber revenue over the forests' multi use values. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the critical recovery of at-risk species.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an opportunity to start this paradigm shift toward accountability and compliance.

Please make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

On behalf of our grandchildren, thank you in advance for making these changes to the draft plan.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Robert Harrington

Dear Oregon Department of Forestry,

I am writing to comment on the draft Forest Management for Western Oregon. My family values our state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic views.

The draft Forest Management Plan needs to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of federal and private lands industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public forests for current and future generations.

Sincerely,
George Hutchinson

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations. I am a tax-paying professional and have loved these forests for decade. i think this is where we find renewal individually and collectively during these difficult times. AND these forests stabilized the biome we live in. Please, please be apublic servant and see that these stands are protected. Thank you!

Sincerely,
Kerstin Britz

Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations. Protect these living treasures.....don't destroy them!

Sincerely,
Laura Manz

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Dear Oregon Department of Forestry,

I value state forests for their FISH and WILDLIFE, COLD CLEAN RIVERS, backpacking..... all of which do NOT coexist with logging, or hunting, or roads.

At the very least stay the freak away from old growth, and waaaay away from rivers. No hunting, no roads.

BUT YOU GUYS ARE GREEDY

BLM data show that the timber sales through the office totalled 290.6 million board-feet this year, an increase of 66.8 million from the previous year.

According to the data, which covers annual sales back to 2005, 2025 was the third-highest year for BLM timber sales through the Oregon office by both board-feet and sale price, topped only by 2019 and 2021.

Sales this year brought in $63.7 million.

2025 was also the second-highest year for the appraised value of BLM timber sold

For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. Dear Oregon Department of Forestry,

I strongly oppose the logging of mature forests on public land. What little remains of Oregon's once vast Oregon ecosystems MUST be managed for the health of the ecosystem, which includes wildlife habitat, soil health, water quality, and carbon sequestration. Evidence based science, not timber industry profits, must guide forest management in this era of ecosystem collapse. Environmental laws must be obeyed.

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Tobin Cox

Dear Oregon Department of Forestry,

We absolutely need to protect the older trees and the old growth. These trees are helping to mitigate climate change. They also create oxygen and rain. They're the lungs of the planet. WE MUST PRESERVE THEM. If we keep destroying nature we will die.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful

recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Rena Zaman-Zade

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

Dear Oregon Department of Forestry,

Hello! I am a student at a local high school, and Oregon's beautiful forests are very important as a place to marvel now and in the future. As a member of the next generation, it will soon be my responsibility to care for these places, but I rely on those currently in power to protect them for me. I would prefer not to worry about the state of our forests, but there is too much at stake to ignore their peril. I hope that enough changes can be made to preserve our forests and the wildlife they care for, which are crucial in climate change mitigation, biodiversity, ecological health, water and air quality, and recreational revenue.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored the requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
diana kolaski

Dear Oregon Department of Forestry,

I am commenting on the draft Forest Management for Western Oregon State Forests.

Stop cutting mature and older, "old-growth" forests and stop all clearcutting.

Prioritize wildlife habitat over commercial forestry.

Sincerely,
JAMES FLYNN

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas.

I have a Ph.D. in Natural Resource Economics from Johns Hopkins U. (1978). From 1980 to 2017 I worked for the Oregon Dept. of Energy and briefly for the Oregon Public Utility Commission (as staff).

For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.
