- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a

necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Philip Carver

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management Plan for Western Oregon State Forests. As an Oregonian, I value our state forests for clean water, wildlife habitat, recreation, and the scenic landscapes that define our shared heritage. Old-growth and mature forests are a living legacy of Oregon's history—once lost, they cannot be replaced within any human timeframe. Protecting them must be a central priority of this plan.

For too long, state forest management has been out of balance, prioritizing short-term timber revenue over long-term ecological health and public values. This draft plan is an opportunity to correct that course by fully protecting remaining old-growth and complex mature forests, restoring damaged ecosystems, improving water quality, and supporting the recovery of imperiled species.

To achieve this, I urge ODF to base the Forest Management Plan on the best available science, comply with existing laws and performance measures requiring protection of older forests, end clearcutting of complex forest stands, reduce reliance on industrial-scale logging, and manage forests for climate resilience and clean water. I also ask that strategies be added to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek's Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

Oregon's old-growth forests are irreplaceable—protecting them now is essential to honoring our heritage and safeguarding these public lands for future generations.

Thank you for considering my comment.

Sincerely,
Austin Koontz

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I moved to Oregon from Minnesota in 1978 in order to attend graduated school at the University of Oregon. Part of my desire to move to Oregon was the fact that Oregon had Old Growth forests, lakes, rivers, and the Ocean. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices. We need our forests and all that they offer as habitat, open space, and a multitude of recreational opportunities.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these

species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

This summer I hiked and backpacked in the Eagle Cap wilderness,. I was astounded by the tremendous diversity of plant life there where I would easily see more than 24 species of ground cover plants and flowers in a 3 ft square area and dozens of shrub and tree species in a short walk. This summer. I hiked and camped in national Forests, BLM land and State Forests.

I hiked through proposed logging sales and I have measured and documented trees that are 45 to 67 inches in diameter in logging sale units that are claimed to be only 70 to 90 years old. I have seen proposed logging roads marked through the largest trees in the logging unit, trees that are 45 to 60 in in diameter would legslly be logged to make room for a road. I have also hiked through post logging units and seen that they frequently in no way resemble their stated goal for Forest Health, Improved Ecosystem Resilience:: or Wildlife Habitat Development: What they do resemble is a disaster zone!

I understand the need for having some plantation forests with uniform single species plantings.
I understand the need for providing lumbar for construction,
But I do not understand or agree with destroying our forest ecosystems and driving species to extinction.
And I do not agree with shipping our logged trees and lumbar out of this country while placing our own species at risk of extinction

I recommend:

The FMP must be based on the best available science for the health and diversity of the forest and streams: Add a requirement for all actions to be based on the best science available, as required under existing law.

Require accountability to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature.

Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law. Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek's Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery

of the 17 imperiled species clinging to to survival in our state forests.

I implore you to make changes to your management plan to decrease the damage to our forest and water ecosystems.

I implore you to makes changes to your management plan to truly increase healthy habitat for our more than 17 species that are at risk of extinction in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Rebecca Lipton

Dear Oregon Department of Forestry,

As a science and natural history author who has studied and spent extensive time with scientists in mature and ancient forests (with a 2026 book coming out from Chelsea Green Publishing: Feathered Forest: Aloft with Birds in Ancient Trees), I strongly oppose clearcutting as a industrial practice with horrendous consequences for ecosystems, including threatened and declining bird and ohter wildlife species. With private landowners clearcutting and now federal lands under dire threat of destructive practices under this Administrative, our state lands are more important than ever.

The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these

species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the forestry plan. I am strongly AGAINST clear cutting of our mature forests. I do not support any plan that maintains or increases the harvest of our important old trees. Please listen to the scientists and environmental groups on formulating a new plan. I want my grandchildren to be able to walk, smell and enjoy our mature forests.

Best regards,
Jan Halvorson

For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Amy Rossman

Dear Oregon Department of Forestry,

My husband and I have lived in Oregon almost 40 years. We enjoy hiking and exploring Oregon's public lands, including its lovely state forests. Over the years we have seen a raft of changes in our natural surroundings. So much of Oregon's forest have burned that many of places we used to frequent no longer look the same. Even worse, we are seeing recurring burns that appear to be altering the environment from forest to what appears to be a chaparral dominated by brambles, shrubs, and smaller trees (e.g., ceanothus; vine maple).

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public forests for current and future generations.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. I am an avid user of our ancient forests and truly value the ecosystem services that they provide. I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Joseph Danko

Dear Oregon Department of Forestry,

I am a volunteer trail worker, hiker, and backpacker who enjoys exploring Oregon's public lands, including its lovely state forests.
I also get to see firsthand the direct and indirect environmental impacts of large-scale logging of these lands, including increased mud and silt in streams, landslides, loss of wildlife habitat, and increasing adverse climate effects such as increasing susceptibility of forests to disease and increasing fire risk in parched forests. To protect Oregon's incomparable flora and fauna and our piece of the earth's fragile biosphere.

For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Cyndi Anderson

Dear Oregon Department of Forestry,

Biological diversity - both floral and faunal – knows no geopolitical bounds nor ecological/economic bounds. Species transcend whatever artificial bounds we attempt to place upon them. Certainly, the intrinsic ecological value of a biologically diverse forest far exceeds its economic value. It is a fool's errand, therefore, to decimate our forests and their constituent wildlife that contribute so very much to existence of the planet, including human lives, with destructive logging.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, we value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. As a resident of Oregon, I value our state's forests. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public forests for current and future generations.

Sincerely,
Kate Mills

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Benton Elliott

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Caroline Lichtenberger

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Jerry Rivers

Dear Oregon Department of Forestry,

The following represents my position in strong SUPPORT that ODF adopt a NEW Forest Management Plan that protects older forests and the imperiled wildlife and fish that call them home.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, (although I am a Californian) I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful

recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these CHANGES to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Audrey Collins

Dear Oregon Department of Forestry,

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

The overwhelming majority of climate scientists, often cited as 97% to over 99.9%, agree that climate change is real and primarily caused by human activities, with studies showing consensus levels rising over time, nearing near-unanimity in recent literature. This consensus includes major scientific organizations globally, like NASA, the IPCC, and national science academies, confirming human-induced warming as a fact, similar to consensus levels for evolution.

On behalf of my children, grandchildren and YOURS, I am asking you to reject the ridiculous requests by the Trump Administration to clearcut Oregon's mature forests that literally cool the planet, keep rivers clean and prosperous, store and reduce carbon to mitigate climate change, filter the drinking water of Oregonians, restore biodiversity that all species depend on, etc.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I recreate in the impacted lands west or Eugene, and west of Corvallis, and I am looking forward to exploring lands near Tillamook! Keep it wild! Or keep it headed that way!

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these

species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Matt Lutter

Dear Oregon Department of Forestry,

I've traveled to Oregon and hiked the wood and paths as a traveler, conservationist, visitor and it was the forests, wildlife and rivers which impressed me most and the only reason I would return. I watched Osprey fly overhead dipping into the river returning to its fledglings with a large fish. We are losing our natural heritage at an alarming rate and it isn't isolated to Oregon. Please protect your part of the country, our natural heritage. Keep it wild!

Thank you for this opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians and visitors like myself, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

Dear Oregon Department of Forestry,

I have lived the majority of my life in the Cascade foothills and the clearcut logging sites around me have always drawn my attention, but at least they seemed to be done in a limited fashion and with strategic intervals. In recent years the clearcut sections have become larger and less spaced out, and I question the impact on the health of our treasured forest land and the potential for increased erosion on hills that I once heard a geologist call giant mudslides. And so I say with personal conviction alongside many other concerned Oregonians that for too long now management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. As we experience the warmest fall and winter in living memory I find myself even more certain we need to do everything we can to protect our mature and old growth forests. The temperate forests of the Pacific Northwest are among the most valuable in the world because of their extraordinary capacity to store and sequester carbon. These forests are far and away the best technology we have for mitigating the effects of climate change and climate chaos we are already facing and will continue to face.Additionally, like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. I value state forests for the natural environment it provides Oregonians, tourists/recreation, fish and wildlife, healthy rivers and clean water for our communities. I do not support managing our state forests that heavily favor industrial-scale clearcutting and timber revenue.

I request that this management plan includes ecological forest management with emphasis on restoring damaged ecosystems.

I urge you to make the following amendments to the draft plan:

- Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Raphael PONCE

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

our Forests are natural allies is helping us to mitigate the harm being done to our earth thru fossil fuel burning.

We are dependent on and just one part of the natural environment that has existed for million of years with the intricate interaction evolved through evolution.
PLEASE, WE MUST RECOGNIZE AND PROTECT THE BALANCE OF THE NATURAL WORLD WITHOUT WHICH WE WILL NOT SURVIVE.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Linda Kelley

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Dear Oregon Department of Forestry,

ODF set a target to RETAIN 30-50% of older forests over a decade ago. BUT ODF HAS FAILED and FAILED MISERABLY AT ITS JOB

Currently, less than 14% of mature complex forest remains and that small percentage continues to be targeted for logging. STOP IT!

ODF is required to adopt a new Forest Management Plan that aligns with the --Habitat Conservation Plan (HCP)--- that the Board of Forestry adopted in 2024. The HCP represents important progress but --won't be enough-- to result in the recovery of endangered salmon and wildlife populations.

We need a FMP that STOPS ALL CLEARCUTTING,,, STOPS ALL LOGGING IMO. STOPS KILLING OUR FORESTS. STOPS KILLING OUR WILDLIFE. STOPS RUINING OUR WATER

Historically, these forests provided ample habitat for northern spotted owls and marbled murrelets and supported huge salmon runs. However, after decades of large-scale clearcuts and aggressive harvest, 17 species – including the coastal marten, red tree vole, northern spotted owl, marbled murrelets, and ten fish species – have been pushed to the brink of local extinction. Despite this, the ODF continues to clearcut mature (80 years and older), structurally complex forest stands that are the type of habitat these species need to survive and recover. These older forests not only provide important habitat but also filter drinking water, absorb climate pollution, and offer countless recreation opportunities to Oregonians and visitors.

** The FMP must be based on the best science available: Add a requirement for all actions to be based on the best science available, as required under existing law.

** Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry or the state legislature. Incorporate these by reference into the FMP.

** Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. It would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

** Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests until a minimum of 30% of the forests are in this condition, as required by current rules and policies. Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

** Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

** Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Dear Oregon Department of Forestry,

I am a lifelong Oregonian that frequently visits our state forest lands. Our state forest lands are loved by many and are home to many species that rely on complex habitats. We need to focus on fire resiliency, habitat restoration, carbon sequestration, water quality, water quantity, recreation, and other values that mature and old growth forests provide.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a

necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Andrew Simrin

Dear Oregon Department of Forestry,

Historically, State forests in Oregon provided ample habitat for imperiled northern spotted owls, marbled murrelets and huge salmon runs. However, after decades of large-scale clearcuts and aggressive harvest, 17 species – including the coastal marten, red tree vole, northern spotted owl, marbled murrelets, ten fish species, and more – have been pushed to the brink of local extinction.

I cannot understand why ODF allows continued clearcutting of mature stands (80 years and older). These stands provide structurally complex forest habitat, which are the precise habitats these species need to survive and recover.

These forests not only provide important habitat but also filter drinking water, absorb climate pollution, and offer recreation opportunities to Oregonians and visitors to our state. Currently, less than 14% of mature complex forest remains and that small percentage continues to be targeted for logging.

Clear cutting must end on Oregon's mature state forests.

Sincerely,
Peter Dragovich

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

Dear Oregon Department of Forestry,

I am sending this in alignment with Oregon Wild and the messages supported by that group.

My thoughts:

For far too long, Oregon has sought a "balance" between logging interest and environmental conservation that has tilted towards the saw. This must end. We must protect the environmental heritage of our state: it's the legacy that aligns with the values or Oregonians. You can see that in the pride we take in our forests, in our wetlands. Our state is full of people that love to spend the weekends camping and sit along the river after work.

Yet those natural places of beauty are every-more infringed upon. Little islands of healthy ecosystems inset between seas of rotating clearcuts. If you look at a satellite image of Western Oregon, it's a checkerboard pattern of "tree farms" that are close to ecologically dead and do not support the rich wildlife and spiritual fullness of a mature forest.

This is being exacerbated by the current rampage in our federal forests. The draft Forest Management Plan for Western Oregon State Forests gives us a chance to move the needle closer to the correct balance of forest management. I am strongly in support.

Thank you.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
David Todnem

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

Dear Oregon Department of Forestry,

So much is at stake as we think about our forests. I am following the minds and hearts of hundreds of thousands who pray our ways of living on planet earth will NOT eliminate them. Right now, it is unclear how this will go in the coming decades. Please act to help, not harm, the future.

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these

species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Judy Todd

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Taryn Joel

Dear Oregon Department of Forestry,

I understand that the OFD must be largely financially self-sustaining. The OFD is also charged with restoring and caring for the forests under their control. Two suggestions:
1) Is ODF engaging in carbon offset markets as a way to keep our carbon sequestering woodlands alive rather than clear cut?
2) Please consider selective horse logging on designated portions of forests under 80 years of age. This method employs more people, creates lower carbon emissions, conserves soil resources, and leaves much of the sequestered carbon in place. It also can enhance some habitat. All while still providing some harvest.
3) Please consider working to increase arboreal diversity in forests stands older than 80 years AND prohibiting clear cutting in these stands.
Good science conducted in Oregon shows that the most combustible forest structure is even aged, mono-species, stands between 20 and 40 years of age. This describes a planted tree farm very accurately. Clear cutting and monocrop planting enhances fire risk. It does not decrease that risk.

Thank you for considering these requests

Sincerely,
Jeff Baldwin

Dear Oregon Department of Forestry,

CLEARCUTTING OUR FORESTS IN 2026, WHEN WE ALL KNOW WHAT'S HAPPENING WITH CLIMATE CHANGE AND THE NEED TO SEQUESTER CARBON HOWEVER WE CAN, IS SIMPLY INSANITY. ALSO, WE ARE NOT THE ONLY SPECIES LIVING ON THIS PLANET. CAN WE NOT RESPECT, AND GIVE SOME SPACE TO, THE ANIMALS WE HAVEN'T YET DRIVEN TO EXTINCTION...BY CLEARCUTTING, OVERFISHING, AND POISONING WITH OUR PESTICIDES?

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. [You don't often get email from methowgratitude@everyactioncustom.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear Oregon Department of Forestry,

My story is that I was born and raised in Oregon to logging and timber family and when I learned along the way that the forest is more than trees, I've had focus on conservation and environmental values ever since. I earned a degree 1970 in biology, and have done paid and volunteer work in a long list of conservation and environmental projects. I still keep contact with Oregon friends and family and receive information about forestry issues.

The updated Forest Management Plan must include the increasing understanding of the forest being more than trees. The long term condition of forests depends on that understanding, not just short term logging. Clearcutting in almost all circumstances is out of date, in particular in mature and old forests. The forest being more than the trees definitely includes attention to watersheds, water quality, awareness of the essential connection of upland forests to downstream water supplies and drinking water, and the habitat importance to salmon and other species.

It is time for serious attention to change away from business as usual. I look forward to the Forest Management Plan moving toward a better outcome. Thank you for the opportunity to make public comment on important public forestry issues.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law. LOGGING IS NOT THE MOST IMPORTANT THING - THESE PEOPLE MUST FIND ANOTHER WAY OF MAKING A LIVING LIKE MANY OF US HAVE HAD TO DO IN OUR LIVES: THEY DO NOT HAVE THE RIGHT TO DESTROY DIVERSE, ELDER FORESTS JUST BECAUSE THEIR DADDY WAS A LOGGER - NO NO NO NO - SAVE ALL OF THE ELDER, HERITAGE FORESTS. THEY CAN LOG THE PLANTATIONS THEY HAVE CREATED.

THIS IS ABOUT MORE THAN JUST MONEY - THESE TREES ARE KEYSTONE TO OUR WATERSHEDS, ANIMAL HABITATS AND CLIMATE STABILIZERS. DO THE RIGHT THING - TRUMP IS A PEDOPHILE.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek's Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Lilith Gist

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Dear Oregon Department of Forestry,

Hello, and thank you all for being here. My name is Flora Booker, and I am a University of Oregon biology and environmental studies student working in a wildfire resilience lab on campus. My work involves measuring plant species composition across forests in Northern Oregon.

The nonprofit I work with manages their lands for complex, layered forest stands, encouraging the growth of more than 148 native plant species and all the life that depends on them. That includes the deer I see grazing through the site, families camping between meadows of lupine, and the constant chorus of birdsong.

Just south of their community forest, in an area of Oregon state forest land, that birdsong stops entirely. The reason is a massive clearcut. When you walk through this area, you see slash left strewn across the forest floor: ready-made ladder fuels waiting to ignite. Invasive cheatgrass has encroached on native species like Idaho fescue, creating problems not only for nearby farmers, but also for the wildlife that depends on native forbs to survive.

There is a clear solution to protect and restore balance in our state forests, and it must be reflected in the Forest Management Plan.
First, the Plan must require that all management actions be grounded in the best available science, as existing law already requires. Ecology and wildfire researchers like myself have invested countless hours collecting data across Oregon's forests to understand how ecosystems function and how communities can be kept safe. Ignoring this science puts both people and ecosystems at risk.
Second, the Plan must prioritize the restoration of healthy, mature forests by halting clearcut timber harvest in complex, layered forest stands on North Coast state forests until at least 30 percent of these forests meet this condition, as required under current policies. My fieldwork shows that these complex forests are more resilient to wildfire, more resistant to invasive species, and far more capable of supporting the wildlife and human communities that depend on them.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Flora Booker

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Michelle Nock

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians.

Climate Change and Climate Smart Forestry should be a part of every decision. Understandably the budget constraints placed on the department by the Common School Fund as well as the departments own budget requirements make decision making -- especially long-range ones -- inherently skewered. This budgetary arrangement needs to evolve.

The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Finally -- I hope with this plan the Department can succeed in building public trust. Ot course, this plan is only as good as its implementation, monitoring, and the transparency that goes along with it. For many years Industrial Forestry like Industrial Farming has bartered the long-term health of local ecosystems for a short-term monetary gain. I hope with this plan that will no longer be our legacy.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Sincerely,
Steve Kennett

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. I have been visiting Oregon's State Forests on the North Coast since I was a child, camping, hiking, gathering, walking streams with my family. These State Forests are owned by all Oregonians and they should be managed for the greatest benefit to all Oregonians. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. We need more emphasis on protection of cold, clean water, fish and wildlife habitat, climate mitigation and carbon storage, gathering, and recreation opportunities.

The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on protecting, and restoring the many valuable ecosystem services and societal values these forests provide.

Oregon's Coast Range State Forests are among the most productive, carbon dense forests on the planet, with incredible climate mitigation and biodiversity values. We need to allow more of these forests to grow older. There are few opportunities to allow forests to grow old on the private industrial plantations that dominate Oregon's Coast Range. Oregon's State Forests are the logical place to emphasize recovery of older forests in large blocks.

It is time for ODF to emphasize meeting the key performance measures that require the protection and enhancement of older and mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore mature and old forests: Protect all remaining old forests and establish the goal of recovering 50% of State Forests to an old/mature forest condition.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and move away from clear-cutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Dear Oregon Department of Forestry,

Dear ODF Representative,

I would like to take this opportunity to thank you for drafting your Forest Management for Western Oregon State Forests. I have lived my entire life in the PNW and I think I am similar to most Oregonians when I say that I cherish state forests for their fish and wildlife and cold clean rivers. I fish the rivers of the Oregon Coast range and they are a treasure to be protected and managed sensibly. The Oregon Coast Range mountains have unfortunately been managed heavily in favor of industrial-scale clearcutting. Timber revenue should not be the driving factor when it comes to land management. Your draft Forest Management Plan is a great opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems and improving water quality.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful

recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

Dear Oregon Department of Forestry,

In the administration's swift, dizzying effort to dismantle democracy, many things are going wrong for us, from fake news to military occupation of our streets to threats upon national parks and forests and denial of climate change.

When we have an opportunity to do something RIGHT, let us capitalize on it. Oregon has long history with clearcuts. They are an embarrassing blight on the landscape of many parts of our beautiful state, but worse, the science behind them is weak.

We have witnessed slide risks of clearcuts in the Northwest, often 10-20x greater than forested areas. In addition to the danger and tragedy of slides is the ruin of the soil transfer for future forests. Large older trees have deep roots that can penetrate bedrock, serving as anchors on forested hillsides.

While clearcuts might make sense for plantation forests, they don't make sense in our temperate rainforest regions, which store carbon, ensure clean drinking water, and provide haven for wildlife. Replanting a clearcut produces a hedgehog forest, which loses benefits of forest succession, including stability and shifts in tree species.

Before the 20th Century even began, upwards of 90% of California's redwood forests were logged. Thank God for Teddy Roosevelt's swift conservation measures in the early 1900s. California and the Northwest are indepted to him for protected lands. Our forests have great value for the natural world and for outdoor recreation.

The Forest Management Plan must strive to meet current and future environmental threats. We cannot get this wrong, because we are out of do-overs.

Sincerely,
Brenda Kameenui

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Harry Knapp

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Nina Fisher

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
James Jungwirth

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests.

I grew up here, in the Willamette Valley, and am familiar with the history of the Spotted Owl controversy, the push and pull of people valuing animals over human families who depend on the timber industry for their livelihood. We're finding ourselves in the same place: we need money. We're also finding ourselves in a different place: we know about carbon sequestering, habitat rehabilitation, and the earning power of ecotourism.

Industrial-scale clearcutting, despite its timber revenue, can't be mitigated by reforestation.

The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality. This is where we are at now. We can't approach this the same way we did in the 80s. We can't even approach it the way we did in the 90s, or early 2000s.

We have to be honest about the fact that for over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature.

ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance:

- Add a requirement for all actions to be based on the best science available, as required under existing law.

- The FMP must require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition. This is as required by current rules and policies, and it must be in the draft.

- Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities. This isn't just about salmon. This is about people who need safe water.

- Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting. This new kind of forestry has been discussed and under consideration since the 90s. Imagine how well acclimated we would be, had we begun practicing it then. We can't go back in time, AND we

can start now.

Thank you for making these changes. Thank you for seeing what we Oregonians need for the future of our forests.

Sincerely,
Marion Vitus

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Sandra Materi

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Michele Villeneuve

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value a stable climate, recreation locations, diverse ecosystems that provide many with physical and spiritual respite, as well as the inherit value in the life flora and fauna that live here. The industrial forest management techniques that have long been favored value profit over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices. If these techniques do not shift we will loose our forests faster due to climate stress and we will not have the safe beautiful and functional ecosystems we all desire and need to survive.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas.

My first experience with Oregon state "forestry" was a gut punch. I was visiting the Coast from Portland for the first time in 1998 or so, and the drive to the coast was a sea of horrific clearcuts. It was an eye-ooening, heartbreaking experience. State forestry is a little better today thanks to dedicated wildlife and climate activism, but not by much. We can do so much better.

For far too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Sue Schümmer

For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

Over 80 years old should be the red line for logging. Keep up sustainable logging but keep off the older trees. We need bigger buffer zones between streams and logging areas. Strep terain logging needs to be eliminated.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. As an Oregon born resident I'm ashamed to say that it was only a few years ago that I was given the chance to spend some time in the Tillamook State Forest. While its beauty even then was being desecrated by logging there were still many pristine stands of old growth trees where streams ran clear and nature thrived.

So, just as the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these

species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon's state-managed public forests for current and future generations.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
George Autry

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

Dear Oregon Department of Forestry,

I am an Oregonian who has deep reverence for the natural spaces we for the most show respect for, but I am deeply appalled by continued clear cutting that occurs in Western Oregon State Forest. To be frank, it is lazy and greedy and we MUST do better, and this is UNACCEPTABLE.

Historically these forests have provided ample habitat for some of my favorite wildlife on the planet; northern spotted owls and marbled murrelets. They have also supported huge salmon runs. However, after decades of large-scale clearcuts and aggressive harvest, these wildlife are imperil.

Like the vast majority of Oregonians, I value state forests for their clean rivers, wildlife, recreation opportunities, and scenic vistas. But for too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians.

The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to

longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won't lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Noah Angell

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Subject: Prioritize economic outcomes
Date: Wednesday, January 14, 2026 7:11:26 PM

Dear Forestry Department,

Thank you for the opportunity to provide input on the Western State Forest Management Plan.

I strongly encourage the Department to adopt a plan that prioritizes the needs of working forests and the rural communities that depend on them.

For the sake of balanced stewardship, financial stability, and the long-term health of Oregon's forests and rural communities, it is vital the Department move forward with a plan that emphasizes strong economic performance.

A substantial portion of state forestland has already been dedicated to wildlife habitat, and the Department's own projections show these areas will more than meet environmental objectives. Further restrictions are unwarranted.
With these conservation commitments already secured, the focus should now shift toward ensuring sustainable economic outcomes. Countless families and timber-reliant communities depend on responsible forest operations for steady jobs and economic stability.

Additionally, revenues from state forest harvests are vital for counties, schools and local taxing districts. Curtailing timber production threatens their ability to deliver essential public services and undermines the Department's requirement to remain financially self-supporting. ODF must continue generating the revenue needed to operate without shifting costs to taxpayers.

It is important that the Department resist ongoing pressure from anti-forestry groups seeking additional limitations that are neither necessary nor balanced.

As a consulting forester and urban forester/ arborist for over 40 years consulting and working in Oregon, we need to support working forests that protect rural jobs and communities. I oppose unnecessary restrictions. We need to restore balance and help to prevent our forests from wildfire. We need to ensure that ODF is self-sufficient in their operating costs as not to beg the legislature when the legislators constantly mismanage money and budgets and want to tax us citizens more for legislative errors in management. I work in the forests, I manage forests, I work on forest health and tree risk issues. I am a forest environmentalist.

Thank you for your consideration.

Subject: Restoring Balance in Oregon's State Forests
Date: Tuesday, January 13, 2026 1:31:45 PM

Dear Forestry Department,

Thank you for the opportunity to comment on the Western State Forest Management Plan.

Oregon's mandate for managing state forests is clear: Greatest Permanent Value requires a balanced approach that accounts equally for environmental, social, and economic benefits. In recent years, that balance has tilted heavily toward environmental and social objectives.

With the Habitat Conservation Plan, those objectives have been fully addressed. The HCP provides expansive habitat protections and long-term conservation certainty. Because these goals are already met, additional harvest restrictions are unnecessary and would only deepen the existing imbalance.

The management plan should now turn its attention to the third pillar of GPV - economic outcomes - by restoring active forest management. Responsible, well-planned harvests improve forest health, reduce susceptibility to disease and wildfire and support critical restoration work. At the same time, they provide dependable jobs, strengthen rural economies and ensure the Department can fund its own operations without shifting burdens to taxpayers.

Rebalancing Oregon's state forest management is essential to achieving true GPV. I encourage the Department to advance a plan that recognizes the equal importance of economic vitality alongside environmental and social stewardship.

Thank you for considering these comments.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Dear State Forests Division Justin Butteris,

As retirees and residents of the Wallowa Whitman National Forest area, we also deeply appreciate Oregon's state forests. They are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly-changing world, and carbon-storing powerhouses in the face of climate change. It is our strong opinion, as members and supporters of Oregon Wild, that these special places are not areas where you should be clearcutting. Jan concurs in this even as she admits to having been the owner of a log trucking company in a previous marriage. Circumstances driven by climate change have changed many perspectives, including our own.

We do appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands. The science is clear: mature forests are the foundation for saving our climate.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies." We certainly agree with that objective!

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change; it also requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Thank you for this opportunity to comment. We ask you to give our concerns and recommendation, and those of tens of thousands of Oregonians, your most serious and thoughtful consideration.

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

[You don't often get email from gailbee@everyactioncustom.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear Oregon Department of Forestry,

Thank you for the opportunity to comment on the draft Forest Management for Western Oregon State Forests. Like the vast majority of Oregonians, I value state forests for their fish and wildlife, cold clean rivers, recreation opportunities, and scenic vistas. For too long, management of these forests has been out of balance, heavily favoring industrial-scale clearcutting and timber revenue over multiple sustainable values cherished by Oregonians. The draft Forest Management Plan is an opportunity to restore balanced management to state forests by focusing on ecological forest management, restoring damaged ecosystems, improving water quality, and aiding the recovery of at-risk species pushed to the brink of extinction by decades of industrial forest practices.

For over a decade, the ODF has ignored requirements of its own rules and key performance measures that require the protection and enhancement of older mature forests adopted by the legislature. From now forward, the ODF must manage state forest in compliance with all existing rules and policies. The draft Forest Management Plan is an essential opportunity to start this paradigm shift toward accountability and compliance.

To restore this balance and accountability on state forests, I urge you to make the following amendments to the draft plan:

- The FMP must be based on the best available science: Add a requirement for all actions to be based on the best science available, as required under existing law.

- Require accountability: Amend the draft FMP to require compliance with applicable laws, policies, plans and key performance measures adopted by the Board of Forestry and the state legislature. Incorporate these by reference into the FMP.

- Bring balance back to state forests: Delete or amend Principle 3 in the draft FMP. Principle 3 would require revenue from timber harvest to fund all of state forest management activities, continuing to prioritize logging over all other values in state forests in violation of state law.

- Restore healthy mature forests: Stop all clearcut timber harvest of complex layered forest stands on North Coast state forests at least until a minimum of 30% of the forests are in this condition, as required by current rules and policies.

- Ensure clean healthy waterways for salmon and communities: Develop forest management and restoration plans for watersheds with impaired water quality to restore water quality to levels healthy for salmon and other aquatic species within ten years and support safe drinking water for communities.

- Fight climate change and build climate resilience: Add strategies to implement the Climate Change and Carbon Plan for state forests and meet directives in Governor Kotek’s Executive Order 25-26 on climate resilience. Shift to longer rotations between harvest and reduce reliance on large-scale clearcutting.

- Commit to the recovery of threatened and endangered species: The Habitat Conservation Plan (HCP) is a necessary step to prevent the local extinction of imperiled fish and wildlife, but it won’t lead to the recovery of these species by itself. The FMP should include specific strategies, in addition to the HCP, to contribute to the meaningful recovery of the 17 imperiled species clinging to to survival in our state forests.

Thank you in advance for making these changes to the draft plan and protecting Oregon’s state-managed public

forests for current and future generations.

Sincerely,
Gail Battaglia

Dear State Forests Division Justin Butteris,

I am writing you to take action to protect Oregon's forests. Our state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Amy Dineen

Dear State Forests Division Justin Butteris,

I live on the Oregon Coast and often drive Highway 20 to Portland and along Highway 101. Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Also given our lack of funding for Transportation Infrastructure, the landslides that have occurred where logging has been allowed to clearcut has left us with blocked highway and roads with no easy fixes.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Dear State Forests Division Justin Butteris,

As a long-time science educator, I did field studies and environmental restoration work with students for many years. Over and over again, I witnessed that work inspire those young people to value and understand the connection between a healthy future for themselves and the health of our public forests, rivers, wetlands and high deserts. It is their future that I think about every time those in charge of managing that finite resource make decisions. And it is their future you must safeguard.
You know that clean water, air and a moderated climate are essential to our future well-being. You know that clear-cutting is a short-sighted, unnecessary management tool, certainly for our maturing forests. You know that prioritizing conservation is NOT a sacrifice, but a necessity.
You must act in the best interests of ALL Oregonians, not just a few, when it comes to managing public lands. ALL Oregonians benefit directly from clean water, air and climate change mitigation. Only a few benefit from clear-cutting and other short-term management practices. You are charged with managing this resource for the greatest benefit of all of us. Act accordingly.

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

Dear State Forests Division Justin Butteris,

I am concerned about the management of Oregon's state forests. The priority should be conservation with no clear cutting allowed. By letting these forests thrive their incredible value can be preserved. They are essential for sequestering carbon and combating climate change, and they are a haven for plants and wildlife. At the same time they can be drivers for the outdoor recreation economy. These special places are not areas where you should be clearcutting. As an avid outdoor enthusiasts, once a forest is clear cut it is no longer an enjoyable place to visit for any sort of outdoor recreation. The land is ruined for generations to come all in the name of profits.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredibly valuable resource, providing vital habitat and water conservation. Our forests should be drivers of a strong outdoor recreation economy; they should be safe havens, and provide climate mitigation, for fish and wildlife in a rapidly changing world; and already provide vital carbon storage. These special places are NOT areas where you should be allowing and promoting clearcutting.

As a science educator and conservationist, I truly appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF needs now to ensure that ALL of our remaining mature forests are protected on state forest lands. We must preserve and work to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Dear State Forests Division Justin Butteris,

As a biologist, I can tell you that Oregon's state forests are irreplaceable, essential habitat. These forests should remain as safe havens for wildlife and carbon storage in the face of climate chaos. They should be completely off limits to clear-cutting or any other destructive practice.

We need solutions that match the magnitude of the threats humans have caused. ODF should ensure all remaining mature forests are completely protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource- a resource to be enjoyed, and treasured for our children.

These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Cathy Lewis-Dougherty

Dear State Forests Division Justin Butteris,

Stop logging our public lands. They are invaluable, irreplaceable legacies for the future of all and should not be squandered for the shortsighted financial “gain” of a few. Oregon’s state forests are essential for the clean air, clean water, viable soil and fungal diversity upon which all life depends. They should not be viewed as a commodity to be extracted. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Maya Holzman

Dear State Forests Division Justin Butteris,

I'm writing because whenever I drive to the coast from Portland, I turn my face away from the window when I pass the logged sections of the forest. The vanity strips and replanting can't replace the diversity and strength of a mature forest. Our forests are one of our most valuable resources. These forests should be preserved so they can drive the outdoor recreation economy, serve as safe havens for fish and wildlife in a rapidly changing world, and be carbon storing powerhouses in the face of climate change. That's why I feel so strongly about stopping clear cutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: “old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies.”

Further, the Governor’s recent Executive Order 25-26 specifically calls out the ability of Oregon’s forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon’s natural lands and waters over the next ten years. Please, don't let the interests of logging companies outweigh the interests of the people and wildlife who treasure our forests.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan. Please take my feedback into consideration. Thank you.

Sincerely,
Lauren Hobson

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Do you remember Earth First!?

Sincerely,
Susanna Askins

Dear State Forests Division Justin Butteris,

There is absolutely no justification, pragmatically or economically, to clear cut trees ANYWHERE. This behavior strip mines trees, pesticide poisons what's left, then plants row crop monoculture trees for harvesting by BigTimber. This is environmental and cultural rape.

We see the results every day traveling in Oregon and the US. Once diverse, resilient and beautiful tree and foliage forests with immense variety are reduced to pathetic pine-type, non-disiduous abominations of a corporate way of making money. Stripmine, steal and move on to the next area until it is also stripped of broad living value. When will everything become stripmined monoculture? When US elites like the Board of Forestry continue to allow clear cutting and do not institute sustainable forestry practices that retain diversity and pubic value while providing enough excellent lumber for future generations.

Non-clear cutting, sustainable Forest practices are used across the world successfully. Pandering to selfish, lazy and badly framed whining by timber companies is inexcusable. Maybe we should suggest socializing timber harvesting into the hands of public service enterprise is the next logical step if the private industry can't get a clue about diverse forest, sustainable forest practices. We the People will do this ourselves to serve our needs for sane forestry practices, and profit for the People, in one of the most wonderful forested areas on the planet!

Sincerely,
Marshall Sanders

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Monte Westerfield

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Ryan Fuchs

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
H Bojab

Dear State Forests Division Justin Butteris,

Our costal temperate rain forest has the capability for being a carbon sequestration machine like no other place on earth. When over a hundred and fifty years old our trees are just beginning their carbon sequestration power, and it accelerates every year after that. Eight billion people, all the worlds' people, are looking to us to do the right thing and husband this special forest! Therefore, place this goal as number one priority please.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Jessica Hendrickson

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Donna Steadman

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Dear State Forests Division Justin Butteris,

Hello Chair Kelly and OBF members,

I am submitting this comment regarding the proposed Western Oregon State Forests Management Plan. ODF's Notice is a comprehensive and well-thought-out document that properly identifies the changing needs and wants of society in reference to future use of our precious State forest resources.

I however find the response to the realities of the effects of the heating of the Climate, proliferation of invasive species, the seeming inexorable slide of iconic Oregon species closer to the oblivion of extinction, and the need to accommodate for expanded recreation and tourism pressures... lacking! The continued EMPHASIS on maximizing timber exploitation at the expense of the above is alarming, almost as if ODF is ignoring the warning signs this very report discusses.

I do support the multiple use concept of our State forests. We are fortunate to currently own forested land in both eastern and western forests, with ODF lands a near neighbor to one of them. That property has been sorely in need of forest health thinning for over 20 years to reduce the risk of insect infestation and a stand replacement fire due to the overgrown nature of the forest therein (that also includes and is adjacent to private and USFS lands with many healthy trees that are at risk from the overgrowth that surrounds them). Instead, ODF seems to disappointingly focuses on getting out the cut.

Our western forest stand is relatively healthy as a middle-aged low mixed forest that also shows signs of these building pressures - high levels of W Red Cedar mortality, and stands of unfortunately doomed Oregon Ash, with infestations of non-native species. The creek beds are gullied from the effects of previous upstream logging and heavier rains of the past few decades. We are actively working with local SWCD and even ODF in habitat restoration and forest health monitoring and would hope that ODF would show the same level of stewardship that we as private forest owners do. These middle-age to older "Legacy forests" in particular should be managed as the precious resource they represent for the future of Oregonians and the health of their publicly held forests. These legacy forests - unlike the younger more heavily managed younger stands - should NOT be clearcut and should instead be managed for wildlife, water quality, and non-impactful recreation to sustain future generations of human and non-human Oregonians.

Thank you for considering my comments.

Sincerely,
Keith Valachi

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Brianna Sullivan

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Erik Geiger

Dear State Forests Division Justin Butteris,

For a state that prides itself on its environmental record, every time I see a clear cut swath where forest used to be, I ask myself "is this really what the people of Oregon want?" Maybe the logging industry wants it, but I don't think the majority of people (voters) in Oregon want this to continue.

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Sarah Medley

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Anne Brown

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

We have already destroyed so much of our forests. I believe it was always possible to log and maintain healthy forests, yet it can't be done by logging almost everything! Short-term greed can't sustain healthy forests for our future. Only look to back east or in Europe to see where that all leads. How will logging be sustained then? It's not rocket science, people! Quit taking the money!! Think of the future and what you want your grandchildren and great-grandchildren to experience in Oregon. What about our river health? What about fishing as a commercial enterprise? Are you opposed to that, as well? The natural world isn't some kind of bank where you can just take out all of the asset you want and the rest will be fine on its own. it has to be done carefully, with sound environmental science behind it, not just with dollar signs in your eyes. People aren't opposed to logging, per se, it's the idiocy that has accompanied it all these years. The idea that all of it can be cut down and who cares about the consequences that people are opposed to. Why do the billionaires and wealthy corporations get to decide about the whole state's future environment? I don't understand why the Department of Forestry is just rolling over and letting them run rampant over our natural resources. It seems so counterintuitive that it seems something is rotten in Denmark.

Sincerely,
Nancy Nowlin
Medford, OR 97501

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Allison Mitchell

Dear State Forests Division Justin Butteris,

I strongly urge you to preserve Oregon's remaining old growth and mature forests for recreation, environmental mitigation, and habitat. They are worth far more to us alive than dead.

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

In light of the threat to Oregonians by a changing climate, I would term them essential management strategies.

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Dear State Forests Division Justin Butteris,

I am a forestland owner in Yamhill County. I have been working to improve my forest for twenty years. I also spend time enjoying public lands across Oregon. As a conservation biologist and naturalist I see the history of each forest in its current condition.

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storage.

More carbon is sequestered in old growth than younger forests. This has been studied and documented by Oregon scientists.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Stacy Drake

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan. Thank you.

Sincerely,
Kevin Lay

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Cristen Lincoln

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Jill Marks

Dear State Forests Division Justin Butteris,

I am writing to urge that the new forest plan value old growth, wildlife, water quality, recreation, and fighting climate change over disastrous clear cutting. I love Oregons old growth habitats and because there are so few left, we need to protect the ones we have left and allow younger forests to mature. I went hiking in the Tillamook state forest a few years ago and I was appalled at the massive clear cuts to that forest. In many places vast areas were reduced to nothing, like a war zone or moonscape. I have not been back to this area since then because I cannot bear the destruction. I noticed one of the bulletin boards states that the Tillamook state forest is an " actively managed forest" . If destroying forests and ecosystems for profit is active management then we need our new forest plan to adopt a different strategy— for the good of everyone and the planet. Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

Despite being miles from any large body of water, I live on an island. The island is covered with vegetation iconic of the great biodiversity of the Klamath-Siskiyou Bioregion, the most biodiverse conifer landscape in the world. Here pines shake hands with cedar, oaks caress firs, madrone mixes with mountain ash, and yew wood shades Oregon grape. On any given day you might see deer, bear, coyote, cougar and a wealth of wildlife.

Yet that biodiversity is disappearing, which is what created my island. Surrounding my home are industrial clearcuts that have completely upended the normal pace and life of nature here. When hillsides are scraped clean, particularly steep hillsides, more than the trees succumb to death.

Let's begin with the mycorrhizal fungi that create a beneficial association with trees (and other woody plants, this is called Ectomycorrhiza). These types of fungi have a broad spectrum of species that make a symbiotic relationship with trees, and help by making a very extensive underground network of connections between their hosts.

These species of fungi help with the exchange of sugars/carbon for nutrients and/or water. The trees are creating the sugars (carbon) that help feed the fungus, in turn the fungus give the trees water/nutrients that would otherwise be out of their root system's reach! There are also studies being conducted that these mycorrhizal networks help the trees all communicate in various ways, such as letting each other know there are invaders trying to breach their defenses (ex: bark beetles, pathogenic fungi, rusts, etc). Forester Peter Wohlleben described this in his fully researched seminal work "The Hidden Life of Trees."

Underlying Oregon's bounty is an ingredient we often overlook, but is key to the state's food systems: soil. Oregon is home to some of the most diverse soils in the world. It's more than dirt, it's the literal history of the land, a record of volcanic explosions and massive glacial floods tracing all the way back to the origin of all matter in the nuclear furnaces of ancient stars. It's also a fascinating ecosystem all to itself, infused with mind-boggling numbers of worms, microbes and fungal mycelial networks that we are only beginning to understand. Put it all together and you get an almost magical substance that's crucial to making Oregon's hops, berries, wine grapes and other crops famous around the world

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Carole Miles

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These lands are not appropriate for clearcutting.
The Habitat Conservation Plan (HCP) for Western Oregon state forests should not allow clearcutting at a time of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
James Langston

Dear State Forests Division Justin Butteris,

As an Oregonian and outdoor enthusiast I beg you to please protect our beautiful state forests from clear cutting! Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

This temperate rainforest region that stretches through the coastal PNW mountains has the potential store more carbon per acre than the Amazon, provide a haven to wildlife and salmon, and ensure clean, safe drinking water for communities. And they could become a draw for outdoor enthusiasts from around the world.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Dear State Forests Division Justin Butteris,

I am writing to express opposition to clearcutting of mature forests in our state forests. I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need to strengthen protections for mature forests. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: “old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies.”

Further, the Governor’s recent Executive Order 25-26 specifically calls out the ability of Oregon’s forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon’s natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Tracy Boyer

[You don't often get email from clabu0@everyactioncustom.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Claire Christy-Tirado

Dear State Forests Division Justin Butteris,

This letter is pre-written, and I agree with every word of it.

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Lucile W Brook

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

Clearcutting is not only unsightly, but creates runoff from steep slopes that chokes off healthy streams, damaging important fish and wildlife habitat. Also, replanting one single species of tree does not recreate a normal healthy forest ecosystem.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

I WILL CONTINUE TO MONITOR THIS ISSUE. I GREW UP IN OREGON, taking its beauty for granted really. We can't afford to do that any longer. We need to preserve these amazing resources.

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Sara Smith

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

Besides being ecologically damaging to fish and wildlife, clearcutting results in increased erosion that continues under-cutting Oregon's state highways -- literally eroding the base of state highways and causing them to collapse into rivers; for example, the recent collapse of State Highway 22 into the North Santiam River and State Highway 6 collapsing into the Wilson River.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Rebecca Haas

Dear State Forests Division Justin Butteris,

Biological diversity - both floral and faunal – knows no geopolitical bounds nor ecological/economic bounds. Species transcend whatever artificial bounds we attempt to place upon them. It is a fool's errand, therefore, to decimate our forests and their constituent wildlife that contribute so very much to existence of the planet, including human lives, with destructive logging.

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

The greatest good is served only by preserving and protecting biodiverse natural systems on which all life depends, habitats that comprise them, and wildlife that inhabit them.

We appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Vince Ready

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Paul Borcherding

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

Clearcutting is something that will likely be happening way too much very soon under the Trump Administration's directive for logging USFS and BLM land. Oregon and other states should keep this in mind and protect what we possess as a State and think in the much longer time span than the Trump Administration's ideas.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

Dear State Forests Division Justin Butteris,

Oregon's state forests are an incredible and undervalued resource. These forests should be drivers of the outdoor recreation economy, safe havens for fish and wildlife in a rapidly changing world, and carbon storing powerhouses in the face of climate change. These special places are not areas where you should be clearcutting.

I appreciate the work that has gone into the Habitat Conservation Plan (HCP) for Western Oregon state forests, but in the face of worsening climate change and intensifying biodiversity loss, we need solutions that match the magnitude of the threats we face. ODF should ensure all remaining mature forests are protected on state forest lands in order to recover old-growth forests across state lands.

The new Oregon Land-Based Net Carbon Inventory states: "old growth and mature forests in the Pacific Northwest have the greatest carbon densities of any forests in the U.S. Protecting carbon stocks in remaining mature and old growth forests, as well as managing mature forests to become old growth forests, are important management strategies."

Further, the Governor's recent Executive Order 25-26 specifically calls out the ability of Oregon's forests to increase carbon sequestration to mitigate climate change and requires conservation of an additional ten percent of Oregon's natural lands and waters over the next ten years.

Legacy forests on state lands will be a cornerstone of that ten percent, and ODF should recognize this in the Forest Management Plan and ensure it is reflected in the principles, goals and strategies of the final plan.

Sincerely,
Jane Heisler
