Private Forest Accord overview:

- SFISH – program is well set up but needs funding commensurate with demand.
- Stream Rules/Classification – program is getting the bugs worked out and is a necessary database to identify stream types and operational limitations.
- Implementation – rollout appears to be gaining traction but there continue to be SFOs that are disgruntled with the PFA.
- Post disturbance harvest rules – OSWA & OTFS continue to be concerned about the latest draft of the rules – options should be considered as noted in various testimonies.

Climate Smart Forestry

Make the Board's Vision regarding climate smart forestry a reality. The board should generate ideas and then act upon them to engage more SFOs in climate-related forestry activities.
