Dear ODF Santiam State Forest,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Pamela Vasquez

Dear ODF Santiam State Forest,

I am writing to urge you to revise your current district Annual Operations Plan (AOP) to exclude timber sales that would log complex, older forests on the Santiam State Forest that burned in the 2020 wildfires. I am concerned that logging after wildfire impacts wildlife and their habitats, sends dirt into streams, and sets back forest recovery into a healthy ecosystem, sometimes by decades. I urge ODF to follow the Governor's Climate Executive Order and preserve these older, burned forests for their role in carbon storage. Logging them will release much of their stored carbon, an unwise action at this juncture of the climate crisis.

I am particularly concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively. Areas that ODF is working to designate as Habitat Conservation Areas for the benefit of rare and endangered species are also proposed for clearcut logging in the AOP. This is unacceptable.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Dear ODF Santiam State Forest,

Walking in pathless forest as I do, I often see trees that have been scorched by lightning or fires. They have recovered and are healthy. I think it is justifiable to wait through a season before cutting trees with green tops. Many of these trees will be strong and healthy if left alone. And citizens will be left with a forest and not a moonscape monoculture.

I am writing to urge you to revise your current district Annual Operations Plan (AOP) to exclude timber sales that would log complex, older forests on the Santiam State Forest that burned in the 2020 wildfires. Dear ODF Santiam State Forest,

THE UMPQUA, SANTIAM AND MCKENZIE RIVERS ARE SOURCES OF CLEAN WATER FOR HUMANS AND FISH. CLEAR CUTS WILL HARM THE RIPARIAN ZONE AND THE WATER QUALITY, AS WELL AS HARM THE SOIL AND OTHER NATIVE PLANTS IN THE LAND'S ATTEMPTS TO REGENERATE. AND AS YOU KNOW, LOGGING ROADS AND CLEAR CUTS CAUSE LANDSLIDES!

PLEASE INSIST ON A FULL ENVIRONMENTAL IMPACT REVIEW FOR EACH PART OF EACH AREA PROPOSED FOR LOGGING. SOME OF THOSE SCORCHED TREES WILL RECOVER, ESPECIALLY PONDEROSA PINE. SOME DEAD TREES ARE BETTER USED STANDING OR ON THE GROUND, THAN HARVESTED VIA CLEAR CUTS AND THEN DRAGGED ACROSS THE LANDSCAPE.

WE CITIZENS WHO ARE OPPOSED TO CLEAR CUTS SHOULD HAVE THE RIGHT TO VOTE ON THIS. THE TIMBER INDUSTRY HAS ACTED WITH IMPUNITY. OUR STATE LANDS BOARD IS A JOKE. THREE PEOPLE CAN DECIDE THE FATE OF ALL OUR STATE FORESTS?

NOW MORE THAN EVER ITS TIME TO STOP ALLOWNG INDUSTRY TO RAVAGE OUR PRECIOUS FORESTS. CLIMATE MITIGATION DEPENDS ON HEALTHY FORESTS. THANK YOU FOR REPRESENTING THE ENVIRONMENT, NOT CORPORATIONS.

I am writing to urge you to revise your current district Annual Operations Plan (AOP) to exclude timber sales that would log complex, older forests on the Santiam State Forest that burned in the 2020 wildfires. Dear ODF Santiam State Forest,

I am writing to urge you to revise your current district Annual Operations Plan (AOP) to exclude timber sales that would log complex, older forests on the Santiam State Forest that burned in the 2020 wildfires. I am concerned that logging after wildfire impacts wildlife and their habitats, sends dirt into streams, and sets back forest recovery into a healthy ecosystem, sometimes by decades. I urge ODF to follow the Governor's Climate Executive Order and preserve these older, burned forests for their role in carbon storage. Logging them will release much of their stored carbon, an unwise action at this juncture of the climate crisis.

I am particularly concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively. Areas that ODF is working to designate as Habitat Conservation Areas for the benefit of rare and endangered species are also proposed for clearcut logging in the AOP. This is unacceptable.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
stu lip

I am particularly concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively. Areas that ODF is working to designate as Habitat Conservation Areas for the benefit of rare and endangered species are also proposed for clearcut logging in the AOP. This is unacceptable.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Chris Aldrich

Dear ODF Santiam State Forest,

I am writing to urge you to revise your current district Annual Operations Plan (AOP) to exclude timber sales that would log complex, older forests on the Santiam State Forest that burned in the 2020 wildfires. I am concerned that logging after wildfire impacts wildlife and their habitats, sends dirt into streams, and sets back forest recovery into a healthy ecosystem, sometimes by decades. I urge ODF to follow the Governor's Climate Executive Order and preserve these older, burned forests for their role in carbon storage. Logging them will release much of their stored carbon, an unwise action at this juncture of the climate crisis.

I am particularly concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively. Dear ODF Santiam State Forest,

I am writing to urge you to revise your current district Annual Operations Plan (AOP) to exclude timber sales that would log complex, older forests on the Santiam State Forest that burned in the 2020 wildfires. I am concerned that logging after wildfire impacts wildlife and their habitats, sends dirt into streams, and sets back forest recovery into a healthy ecosystem, sometimes by decades. I urge ODF to follow the Governor's Climate Executive Order and preserve these older, burned forests for their role in carbon storage. Logging them will release much of their stored carbon, an unwise action at this juncture of the climate crisis.

I am particularly concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively. Areas that ODF is working to designate as Habitat Conservation Areas for the benefit of rare and endangered species are also proposed for clearcut logging in the AOP. This is unacceptable.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Steve Elliot

Dear ODF Santiam State Forest,

As a DOF with new members, you now have a special opportunity to rethink past practices that have harmed the long term health and viability of Oregon's treasured public forests. I am specifically writing to ask that you reconsider the current district Annual Operations Plan (AOP) and stop planned timber sales that would log the complex, older forests on the Santiam State Forest that were affected by the 2020 wildfires. Much research has shown that logging after wildfire does more harm than good, with serious negative impacts on wildlife and their habitats and on soil erosion and water quality. Such logging can delay the natural process of forest recovery and the return to a healthy ecosystem. Older, burned forests also have a role in carbon storage, as logging will release most of their stored carbon. Please adhere to the Governor's Climate Executive Order and preserve these trees.

I am particularly concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively. Areas that ODF is working to designate as Habitat Conservation Areas for the benefit of rare and endangered species are also proposed for clearcut logging in the AOP. This is unacceptable.

I am concerned that logging after wildfire impacts wildlife and their habitats, sends dirt into streams, and sets back forest recovery into a healthy ecosystem, sometimes by decades. I urge ODF to follow the Governor's Climate Executive Order and preserve these older, burned forests for their role in carbon storage. Logging them will release much of their stored carbon, an unwise action at this juncture of the climate crisis.

I am particularly concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively. Areas that ODF is working to designate as Habitat Conservation Areas for the benefit of rare and endangered species are also proposed for clearcut logging in the AOP. This is unacceptable.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy. We know clearcutting is never the best solution. Please stop this plan of destruction.

Sincerely,

Sincerely,
Susannah Gelbart

Subject: Restore the Santiam State Forest without Logging It
Date: Sunday, April 04, 2021 4:46:14 PM

Dear ODF Santiam State Forest,

On behalf of my family of ten (10)--environmentalists all, as well as ardent campers, hikers, devotees to Old Growth (and not-so-very-old-growth)-- I am writing to urge you to revise your current district Annual Operations Plan (AOP) to exclude timber sales that would log complex, older forests on the Santiam State Forest that burned in the 2020 wildfires. We all are concerned that logging after wildfire impacts wildlife and their habitats, sends dirt into streams, and sets back forest recovery into a healthy ecosystem, sometimes by decades. We urge ODF to follow the Governor's Climate Executive Order and preserve these older, burned forests for their role in carbon storage. Logging them will release much stored carbon, an unwise action at this juncture of the climate crisis.

We are particularly concerned that known Northern Spotted Owl forest habitat may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests; so do certain insect and bird species known to live almost exclusively in burned forests.

Areas that ODF is working to designate as Habitat Conservation Areas for the benefit of rare and endangered species are also proposed for clearcut logging in the AOP. This is both short-sighted and in opposition to the science.

We hope the Department takes an active role complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, left to recover naturally, can act as great carbon sinks; if left unmanaged, they will develop into mature and old-growth forest twice as fast as "salvage-logged" forests, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
