Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Glynis Simmons

Dear Deputy Division Chief Ron Zilli,

Stop the salvage logging!

Stop the proposed post-fire implementation plan for the Santiam State Forest. The proposal gives inadequate consideration to a number of issues I--and all Oregonians who care about the water, forests, recreation, and animals--are concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

For example, Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

The Department must take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

I live in an area where I have witnessed an increase in the number of log trucks driving by my home. For the most part I believe these are logs coming off of private land that has burned. Please, we don't need to add in the public owned forests as well.
Sincerely,

Sincerely,

Date: Tuesday, December 22, 2020 8:42:40 AM

Dear Deputy Division Chief Ron Zilli,

I am a business owner living in Eugene. I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I understand that ODF has released a proposal that shows it is planning to clearcut up to 3,500 acres that burned in the Labor Day fires.

We know that burned forests provide healthy habitat for a myriad of wild plant and animal species, some found in no other kind of forest. So-called “salvage” logging after a fire destroys this precious habitat. Additionally, post-fire logging increases landslide risk and harms our fish populations by making it more likely our streams will fill with sediment from unprotected soils.

I am also concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown’s Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a “salvage-logged” forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Frank Van Bree

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Sandra Boylston

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Kirsten Wert

Dear Deputy Division Chief Ron Zilli,

News of the unsupportable plan to cut trees that survived the devastating fires that ravaged the Santiam State Forest compels me to write to demand you abandon this proposal.

Decades of forest plans that prioritize industrial logging over healthy ecosystems contributed to the devastating fire that ravaged the Santiam State Forest.

Hasn't the agency heard the news that the world is in a climate emergency?

This plan is nothing but a timber grab by an industry whose approach is horribly outdated & scientifically unsound.

Shame on ODF for even considering such a preposterous heist by an industry that serves only itself -- what a tone deaf response to the urgent need to PROTECT forests!

Before the ODF rams this misguided plan through., I urge the agency to carefully consider the dual threats to a planet under siege: climate change & species extermination.

A forest functions well with intact habitats running with clean water where aquatic & terrestrial wildlife live with sufficient food & cover. Forests store and sequester carbon. Causing further damage to a forest whose health has been compromised by disastrous fires will not restore the intricate ecosystems in need of time to recover & renew. Your plan will compromise a forest needing restoration.

Although the fires of 2020 were of great magnitude, fire remains an integral part of a forest's life cycle. Flora & fauna, like the Northern spotted owl, rely on fire for regeneration.

As part of the review process, I trust ODF will conduct its thorough review to ensure it complies with Governor Brown's Climate Action Plan (EO 20-04). As it stands, ODF's plan only offers a gift to the timber industry, which risks worsening, rather than mitigating, the impacts of climate change.

When allowed to recover without human interventions, burned forests resume their function as carbon sinks. If left to rejuvenate, a burned forest will mature twice as fast as a "salvage-logged" forest, providing abundant habitat and carbon storage as the trees grow. Cutting trees releases stored carbon into the atmosphere.

Before caving to the demands of the timber industry, I request your agency conduct a thorough, careful analysis of the myriad ecological benefits of the Santiam State Forest. By sparing the forest further damage from industrial logging, its recovery will provide intact habitat & develop resilience to the impacts of a warming climate.

Without thorough evaluation of the risks posed by kowtowing to the timber industry, the ODF will once again shirk its public duty to conserve Oregon's finite natural treasures.

ODF is directed to serve the public interest, not the interests of private entities.

The only way to "Keep Oregon Green" is to safeguard its fragile forests. Science, not profit, must determine the fate of the Santiam State Forest.

For Earth,
Eliza Muphy

Sincerely,
eliza murphy

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Bill O'Brien

Dear Deputy Division Chief Ron Zilli,

I hope this email finds you well. I am reaching out to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. Like many other Oregonians, I love our state's lush green spaces, and I am concerned that the proposal gives inadequate consideration to the impacts to wildlife and habitats, streams, water quality, and carbon storage.

Specifically, I have heard that Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging, which would be especially devastating since spotted owls rely on burned forests. Moreover, a number of insect and bird species are known to live in burned forests almost exclusively, and I fear they would be negatively impacted as well.

I would also like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. If left unmanaged, instead of logged as proposed, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please withdraw this logging plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Thank you for your time and consideration, and I urge you to prioritize wildlife, habits, and the potential for carbon storage and step back from this plan.

Sincerely,

Sincerely,
Brendan Adamczyk

Dear Deputy Division Chief Ron Zilli,

STOP POST WILDFIRE CLEARCUTTING OF THE SANTIAM STATE FOREST. THERE ARE SCIENTIFIC AND ECOLOGICAL REASONS WHY CLEARCUTTING AFTER A FIRE IS EXACTLY THE WRONG THING TO DO.

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Salvage logging is one of those things that sounds like a good idea, but actually is not. Please follow the science, not the call to extract profits. We need our forests, including those that have been burned, to support our wildlife, as burned forests do far better than logged ones, and provide carbon sinks. Both these functions are vital to the ongoing health of both the environment, and we humans who are a part of it.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Date: Monday, December 21, 2020 7:50:36 PM

Dear Deputy Division Chief Ron Zilli,

I'm concerned about the proposed post-fire implementation plan for the Santiam State Forest. It does not look as if impacts to wildlife and habitats, streams, water quality, and carbon storage are being adequately considered.

People too will be affected when the stability of burned land is clear cut.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks and mature twice as fast as a "salvage-logged" forest. Some birds only live in fire ravaged areas, and the remains of the trees are their refuge.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

You have seen how the clear cut forests have recovered from the fires and how those with diverse species and ages of trees fared. We need these forests to be intact as possible. We are a carbon sink for the world and we need to do whatever we can to protect the tiny fraction of forests with old growth character that are left. If we do not we will face more severe drought and more intense fires in the future. Let nature recover the forest otherwise there will soon not be a habitable climate for any logging as the majority of firs are dying now due to drought that has been worsened by clear cutting.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Natalie Stameroff

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Myriam Alaux

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to stop the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal is not well thought out and gives inadequate consideration to a number of issues, including impacts to wildlife and habitats, streams, water quality, and most importantly climate change and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I want to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Joana KIRCHHOFF

Dear Deputy Division Chief Ron Zilli,

Please reconsider your proposed post-fire implementation plan for the Santiam State Forest. Let's take some time to think about the long term and permanent impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take a forward thinking and active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Carol Jagiello

Subject: Focus on Santiam State Forest restoration, not logging
Date: Monday, December 21, 2020 5:58:47 PM

Dear Deputy Division Chief Ron Zilli,

I am writing you regarding the proposed you have for a post-fire implementation plan in the Santiam State Forest. This plan is problematic on a number of levels and I am asking your office to stop the proposal. The proposal as written does not adequately consider a multitude of impacts to wildlife and forest habitats, streams, water quality, and Co2 storage. I am also very troubled and concerned about the impact to the Northern spotted owl as their habitat will certainly be destroyed by the extensive post-fire logging you have planned. Spotted owls rely on the burned forests of the Santiam. A

I would ask that Department of Forestry take a more active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

I ask that you pull back from implementing this plan to do a more comprehensive evaluation of how the Santiam State Forest could contribute to our climate goals and habitat protection before moving ahead with this profit-driven timber plan that harms our forests.

Sincerely,

Sincerely,
Anthony Silvaggio

Dear Deputy Division Chief Ron Zilli,

Please do not rush to clear cut!

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Karen Fletcher

And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

I love this forest and it brings so much needed joy to people that recreate in it. Especially now when social distancing is the norm--being in nature can have a stress reducing influence on folk, so we truly need to protect our wild places and the animals that call Santiam home.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Kerry Scannell

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Kiva Mitrea

Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

-----Even people without degrees in forestry such as me know that forests that have burned grow back lush and healthy. For the life of me I can not fathom why the Forest Service would clear cut the Santiam State Forest. Clear cutting in any instance is bad for forests, wildlife, and the environment in general. The risks and other negatives certainly outweigh any reasons the Forest Service may have for this proposal. Climate change is upon us and every forest is vital to staving it off as much as possible. In the end it is wildlife who will suffer the most as such a large swath of their home will be destroyed. Where are they to go? Their habitat has shrunk so much already and continues to do so putting them in peril. All in all I feel this is a very bad plan. Clear cutting should never be a choice especially when the Santiam will grow back so well and be rejuvenated all on its own.----

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Kate Kenner

Dear Deputy Division Chief Ron Zilli,

Dear Sir,

Logging soon after a fire is the worst time for any stakeholder other than those privileged few who will make some quick bucks.

After a stand-replacing fire, the last thing a forest needs is a genetics-replacing treatment.

The wise thing to do is let nature take her course and recover the area as it has for 10,000 years.

Please do the wise thing.

Thank you for considering my request.

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Lasha Wells

Sincerely,

>>>My personal opinion is that a total 100 percent clear-cutting goes too far, and that 50 percent clear-cutting would be better for the recovery of the burned forest area. I also suggest a lottery to raise money for the rehabilitation of the forest. The Scratchers type of lottery tickets is popular.<<<<<

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you strongly to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively. You may wonder why I am concerned. It has to do with my upbringing. My father who worked for the USFS taught me to respect all life, including for wildlife and wilderness areas, something I have passed down to my daughter.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy. I look forward to hearing that you have done the right thing, the responsible thing. Thank you.

Sincerely,

Sincerely,
Sara Hayes

Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage. Similar clearing after a wildfire in El Dorado County, CA recently led to a fast spread wildfire this year into the former burn area that lasted for weeks--a mistake not to be repeated anywhere.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Dear Deputy Division Chief Ron Zilli,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage. I live less than 30 miles from the site of the Holiday Farm Fire, which is a classic example of what can happen when an area is clear cut, and mixed forests are replaced with tightly packed, single species forest "plantations."

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow. The Oregon department of forestry should not be bending to the will of the timber industry. If ANY logging is allowed, it should only be on a selective basis. Clear-cutting has no place in our forests and we have allowed it for too long. The timber industry needs to do the right thing for all of us, instead of taking the easy way out so they can make maximum profit off our forests.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Lisa Mazzola

Dear ODF Santiam State Forest,

Hello,

I am one of many people who oppose post-fire clear cutting and am asking you to stop the proposed post-fire implementation plan for the Santiam State Forest. It is really a short-sighted solution to taking care of these burned areas. Fire is an essential regeneration force, but not if we interfere by clear cutting. This scarred land will be the healthiest if we let it stand and allow the animals, birds, and plants to use this area for their habitat, and leave all this carbon in place. I am deeply concerned that the proposal gives inadequate consideration to a number of issues, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department TAKE AN ACTIVE ROLE in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,
Briana Martinez

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
NICHOLAS SIMPSON

Dear ODF Santiam State Forest,

I am dismayed by your backwards and poorly conceived plan to clearcut thousands of acres of Santiam State Forest trees burned by our recent fires.

This is bad forest management and destructive of an already traumatized ecosystem. It doesn't improve future growth; it inhibits it. As the ODF - you already know this.

You know that it creates conditions for landslides and increases climate change.

I expect more intelligent and forward thinking by a state agency. You are here to serve the public and the state, and help forests - not destroy thousands of acres and impair recovery. Follow the guidelines of EO 20-04, for goodness sakes.

I would appreciate your keeping these thoughts in mind - and immediately halt this dangerous plan.

Thank you,

Sincerely,
Helen Caswell

Dear ODF Santiam State Forest,

Please pause the proposed post-fire implementation plan for the Santiam State Forest and rethink the suitability of this option. I am concerned for many reasons, the most dear to me now being carbon storage. Many of us, maybe you as well, are learning that the forests of the Pacific Northwest are one of our nation's greatest assets in dealing with climate change because they act as huge carbon sinks. If the recovering forests are left to heal on their own, my understanding is, they will grow mature trees that eventually become old-growth forests at a rate much faster than so called salvage logging management of forests. Salvage logging adds more carbon to our atmosphere and leaves less trees to continue growing to reach old growth quality, sequestering carbon as they grow.

This is a timely opportunity for your department to comply with Governor Brown's Climate Action Plan (EO 20-04).

You work for all Oregonians. Please reflect on how to do the most good for all of us and more fully evaluate how the Santiam State Forest might contribute to healthy salmon and other habitat and helping meet the climate goals for Oregon and the US.

Thank you for your time and for your hard work for our state. Wishing you a good holiday season.

Sincerely,

Sincerely,

Dear ODF Santiam State Forest,

Other than roadside and trailside dangerous burnt trees, there is very good reason to leave as many standing snags as possible for the future of wildlife and native plants. Historical studies by James Johnston and Beverley Law at OSU have shown the value of letting post fire stands remain in place for the future of a healthy forest.

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

Date: Wednesday, December 23, 2020 10:13:19 AM

Dear ODF Santiam State Forest,

I am writing to urge you to reconsider your proposed fast-track clear-cut in the Santiam State Forest.

We are facing climate chaos if we don't alter our "business as usual" approach to the planet. When burned forests are not logged and left to recover naturally, they lock away significant amounts of carbon. They develop into old-growth forest twice as fast as forests that have been salvage logged. Researchers from Oregon State University found that the largest one percent of trees in mature and old-growth forests comprise 50 percent of the biomass—storing half the forest's carbon. The biggest step Oregon can take to address climate change would be to protect and grow its forests to sequester more carbon.

The Department should take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04).

The clear-cutting proposal also endangers streams and rivers, and fish habitat. It would be incredibly destructive to wildlife, which you are charged with supporting. It would increase landslides.

Please reconsider this ill-advised and hasty plan. Santiam State Forest should be left to re-grow into one of the state's treasures. I urge you to place wildlife, forest habitat, water quality, recreation, the public and climate action above the short-term profits of timber companies.

Sincerely,

Sincerely,
Nadene LeCheminant

Dear ODF Santiam State Forest,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

I work for a watershed council and am devoted to continuing to understand the intersection of supporting healthy ecosystems and human economies. We are at a critical point in history with climate change, destructive wildfires, and pandemics. It is not a time for business as usual. I believe there are ways we can sustain a robust local wood-products and timber economy without sacrificing the ecosystems we depend on for life. It is time to reach outside of our norms, talk to each other across political or ethical lines, and creatively find ways to move ahead that will sustain humanity and the planet. I urge you to take a pause on salvage logging and re-examine logging practices to be sure they are in alignment with ecological needs.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Dear ODF Santiam State Forest,

I urge you not to permit clearcutting of post-fire acreage in the Santiam State Forest. Those acres should be allowed to recover NATURALLY to avoid impacts, including landslides, on wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat in the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

It would be a positive step for carbon reduction in our atmosphere if the Department took an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Thank you,
Julie Starita

Science matters in deciding the fate of enormous swaths of forest. There is no 2nd chance when choosing whether to log and allow natural regeneration. The a Yale University publication Yale 360, Ed Struzik writes a definitive treatise on letting forests recover on thier on. Please have courage to read it- <https://e360.yale.edu/features/does-a-fire-ravaged-forest-need-human-help-to-recover>

Dear ODF Santiam State Forest,

The letter below expresses my personal concerns and hopes. We need forests more than ever, even those which have burned will recover and help our entire ecosystem. I'm especially opposed to new roads in any wilderness areas or on State forest land. Perhaps its possible to do some salvage logging near existing roads, as clean up effort. But not in the majority of the forest. THANK YOU FOR CONSIDERING OUR OPINIONS. PLEASE PUT ENVIRONMENTAL HEALTH FIRST, BEFORE PROFITS...

Dear ODF Santiam State Forest,

I was born and raised in Oregon, and have lived here all of my 64+ years.

I love our beautiful state.

I know that it is tempting to take lumber from the burned trees in Santiam State Forest, but I am asking you to please take a different route, one that prioritizes the nature that we love so much, the beauty that brings people to Oregon.

For the prevention of mudslides and siltifying the streams, for the habitat of the owls and certain bird and insect species, for the carbon sequestered in the burned forests that will not stay sequestered if logged.

I know it is tempting, and yet we must make these kinds of decisions if we are to have a world to live in.

Thank you so much for your time, and for truly caring for the corner of the world over which you have some jurisdiction...

Respectfully,
Sara Hubbe

Dear ODF Santiam State Forest,

We are in a climate emergency and we have seven years before feedback loops begin the irreversible collapse of our habitat.

Fires and the burned trees are Natures way of reviving the forest. Cutting burned trees deprives the forest of the needed resources that these trees provide.

Cutting burned forests deprives wildlife of the the habitat benefits left from the fire.

Please stop destroying our forests so that some people/corporations (often private hedge"equity firms") and can increase their profits.

Forests are held in public trust and the people do not want any more destruction! We will have an increase in fores and a reduction of snow pack in Oregon.

The time to stop "salvage" logging is now. RESpect the people not the profits.

Sincerely,
Patricia S. Hine

Dear ODF Santiam State Forest,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Salvage logging results in a monoculture of plant life, that does not foster the diversity that is needed for a forest to recover from a fire in a healthy way. We MUST consider more than just profit in this, and other logging sales if we are to preserve our heritage. To cast out the ecological value of this timber in favor of expedient money making is to make the most foolish and short-sighted of decisions. Please consider the future of the youth of Oregon as well as the wildlife who can thrive in this space when you make your decision.

Not only will future fires be prevented by leaving these forests intact, but landslides as well.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,
Carlan Kephart

Subject: Focus on Santiam State Forest restoration, not logging
Date: Sunday, January 03, 2021 9:20:34 PM

Dear ODF Santiam State Forest,

As we begin the new year, many of us are thinking about renewal and regrowth. The fires that burned the Santiam Forest this past year will lead to rejuvenation and recovery of that forest, providing habitat for many species, but only if the burned areas are allowed to recover naturally. Unfortunately, the salvage logging planned on the Santiam State Forest will bring that recovery to a halt by stripping the land of habitat trees and increasing run-off.

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the current proposal gives inadequate consideration to the impacts to wildlife and habitats, streams, water quality, and carbon storage.

Northern spotted owls and many woodpecker and insect species rely on burned forests for survival. These species are important to our forests. In addition, the increased sedimentation from post-fire logging will harm salmon reproduction by spoiling streams.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,

Date: Saturday, January 02, 2021 6:36:41 PM

Dear ODF Santiam State Forest,

As a fire ecologist and Oregonian, I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage. Dead and downed wood is very beneficial to ecosystem health. Its presence enhances soil and allows plants to grow back more quickly, which increases habitat quality for wildlife. Post-fire logging is likely to destroy Northern spotted owl habitat as well as the habitat of other insect and bird species.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Subject: Focus on Santiam State Forest restoration, not logging
Date: Saturday, January 02, 2021 6:34:23 PM

Dear ODF Santiam State Forest,

I am writing to urge you to change your plan to salvage log 3.500 acres of the Santiam State Forest. Salvage logging has disastrous results for communities and the environment. Salvage Logging leads to removal of the remaining carbon in the forests, and causes erosion that is very damaging to water quality. Many rural communities depend on these rivers for their water supply.

You must pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow. These values are no less important to Oregonians than short-term harvest revenues.

As a 16 year old my future depends on keeping as much carbon in the atmosphere to prevent the deadly effects of climate change. Every action to limit the effects of climate change is so important to the future life of everyone on this planet, which is why you must change your plan to Salvage log the Santaim River Basin.

Sincerely,
Matt Stevenson

From: [Fiona McLary](#)
To: [SFCOMMENTS ODF * ODF](#)
Subject: Focus on Santiam State Forest restoration, not logging
Date: Saturday, January 02, 2021 6:32:28 PM

Dear ODF Santiam State Forest,

Thank you to the ODF fire division for their work this past fall, when they worked in harrowing conditions to protect Oregonians. I understand that significant restoration efforts will need to take place in the Santiam State Forest in the upcoming years in order to ensure public safety and to improve forest conditions. However, upon review of the proposed implementation plan I am concerned that approximately 3500 acres is proposed to be harvested in FY21, and possibly up to that number in each of FY22 and FY23 (p.9 of IP), with no explanation of why such a large acreage is justified by the objectives listed in the introduction. The plan states that 16,600 acres of the Santiam State Forest were damaged by the fires, with approximately 2800 acres at low severity (based on the graph on p.3 of IP), so the proposal is to salvage harvest a quarter of the areas that has been severely burned, with no clear justification. The existing FY21 AOP for the North Cascade District already calls for modified clear cuts on 541 acres (1% of the district), so this new IP is proposing more than 6 times that acreage.

Salvage logging hinders the recovery of our forests and can cause lasting damage to the soils. Burned forests continue to be a store of carbon, and the snags and downed logs provide critical habitat as they slowly decompose. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow. On the other hand, the majority of the carbon in harvested wood volume is released to the atmosphere within a short period of time from harvest. I request that you reassess the acreage that actually needs salvage logging and provide clear justification for the proposal, including your considerations of the impact on habitat and on carbon storage. These values are no less important to Oregonians than short-term harvest revenues.

Sincerely,

Sincerely,
Fiona McLary

Dear ODF Santiam State Forest,

I am writing to urge you to pause the proposed post-fire implementation plan for the Santiam State Forest. I am concerned that the proposal gives inadequate consideration to a number of issues I am concerned with, including impacts to wildlife and habitats, streams, water quality, and carbon storage.

In particular, I am concerned that known Northern spotted owl habitat on the forest may be destroyed by extensive post-fire logging. Spotted owls rely on burned forests. And certain insect and bird species are known to live in burned forests almost exclusively.

I would like to see the Department take an active role in complying with Governor Brown's Climate Action Plan (EO 20-04). Burned forests, when left to recover naturally, can act as great carbon sinks. And, if left unmanaged, they will develop into mature and old-growth forest twice as fast as a "salvage-logged" forest, providing wonderful habitat and carbon storage as they grow.

Please step back from this hasty plan and fully evaluate how the Santiam State Forest could contribute to healthy habitat and climate goals before moving forward with this profit-driven timber strategy.

Sincerely,

Sincerely,
Mel Green

Dear ODF Santiam State Forest,

The state should take a longer view when working to restore the Santiam Canyon fire area. Logging, salvage logging, will disturb the soil. leading to erosion, slides, and sediment. the Gorge, Eagle Creek, fire left the land undisturbed because it was fragile. It was so fragile the public was kept out three years. Santiam Canyon is no different. Are the salvage trees more or less valuable than the soil? The state should have longer goals than a few jobs right now. It will cost less in the long run to let the Santiam Canyon regenerate without disturbance.

Sincerely,
Keta Tom
