Oregon Department of Forestry,

When it comes to post-fire harvest and recovery of our forests, there's no time to waste. After the heat and flames of a fire, it only takes a few weeks for insects to make their way in and break down trees and other organic matter that holds our forest soils in place and filters our water.

By harvesting quickly, we may reclaim the wood and help offset the costs of reforestation efforts necessary to restore our forests back to healthy, thriving lands that protect soil and water quality.

Why not turn trees harvested from these devastating fires into essential building products by local manufacturing facilities that we can use to rebuild our communities? Please get to work now on recovering our forests.

Thank you,
Heath Curtiss

Oregon Department of Forestry,

When it comes to post-fire harvest and recovery of our forests, there's no time to waste. After the heat and flames of a fire, it only takes a few weeks for insects to make their way in and break down trees and other organic matter that holds our forest soils in place and filters our water.

By harvesting quickly, we may reclaim the wood and help offset the costs of reforestation efforts necessary to restore our forests back to healthy, thriving lands that protect soil and water quality.

Why not turn trees harvested from these devastating fires into essential building products by local manufacturing facilities that we can use to rebuild our communities? Please get to work now on recovering our forests.

Thank you,
John meyers

Oregon Department of Forestry,

When it comes to post-fire harvest and recovery of our forests, there's no time to waste. After the heat and flames of a fire, it only takes a few weeks for insects to make their way in and break down trees and other organic matter that holds our forest soils in place and filters our water.

By harvesting quickly, we may reclaim the wood and help offset the costs of reforestation efforts necessary to restore our forests back to healthy, thriving lands that protect soil and water quality.

Why not turn trees harvested from these devastating fires into essential building products by local manufacturing facilities that we can use to rebuild our communities? Please get to work now on recovering our forests.

Thank you,
Judith McLean

Oregon Department of Forestry,

After searching Oregon Forestry Department's webpage, I could not find the department's plan to remove forest fire debris and replant Oregon's burned forests. Is there a plan?

Oregon is known for its beautiful, green forests. If clean-up and reforestation aren't implemented immediately, then the burned forest floors will be damaged by winter weather. And don't forget that all the forest creatures that managed to escape with their lives have been left homeless.

Oregon's Department of Forestry's responsibility is to maintain its forests. It was not created to support interdepartmental bureaucracy.

Please, please put healing our forests first.

Very sincerely, Lorinda Gayl

Thank you,
Lorinda Gayl

Oregon Department of Forestry,

Please put your full support behind immediate remediation for the forests which have been so badly damaged by fire. This is necessary to prevent further and possible permanent trauma to the forests and harm to the water runoff.

By harvesting quickly, we may reclaim the wood and help offset the costs of reforestation efforts necessary to restore our forests back to healthy, thriving lands that protect soil and water quality.

Please let's get to work now on forest recovery.

Thank you,

Oregon Department of Forestry,

When it comes to post-fire harvest and recovery of our forests, there's no time to waste. After the heat and flames of a fire, it only takes a few weeks for insects to make their way in and break down trees and other organic matter that holds our forest soils in place and filters our water.

By harvesting quickly, we may reclaim the wood and help offset the costs of reforestation efforts necessary to restore our forests back to healthy, thriving lands that protect soil and water quality.

Why not turn trees harvested from these devastating fires into essential building products by local manufacturing facilities that we can use to rebuild our communities? Please get to work now on recovering our forests.

Thank you,

Oregon Department of Forestry,

I have been an Oregon resident for more than 50 years, and over the last 30 year's myself and many hardworking Oregonians have been ignored and belittled by the so called environmentalist, that have turned out to be nothing more than activists that scream loudly and throw temper tantrum and has done more damage than good.

When it comes to post-fire harvest and recovery of our forests, there's no time to waste. After the heat and flames of a fire, it only takes a few weeks for insects to make their way in and break down trees and other organic matter that holds our forest soils in place and filters our water.

When it comes to post-fire harvest and recovery of our forests, there's no time to waste. After the heat and flames of a fire, it only takes a few weeks for insects to make their way in and break down trees and other organic matter that holds our forest soils in place and filters our water.

By harvesting quickly, we may reclaim the wood and help offset the costs of reforestation efforts necessary to restore our forests back to healthy, thriving lands that protect soil and water quality.

Why not turn trees harvested from these devastating fires into essential building products by local manufacturing facilities that we can use to rebuild our communities? Please get to work now on recovering our forests.

Thank you,

Oregon Department of Forestry,

When it comes to post-fire harvest and recovery of our forests, there's no time to waste. After the heat and flames of a fire, it only takes a few weeks for insects to make their way in and break down trees and other organic matter that holds our forest soils in place and filters our water.

By harvesting quickly, we may reclaim the wood and help offset the costs of reforestation efforts necessary to restore our forests back to healthy, thriving lands that protect soil and water quality.

Why not turn trees harvested from these devastating fires into essential building products by local manufacturing facilities that we can use to rebuild our communities? Please get to work now on recovering our forests.

Thank you,
Michael Elsberry

Oregon Department of Forestry,

Good morning,

I am writing to support an effort to restore Oregon forests by harvesting and replanting in areas that have been burned.

Please make reasonable choices to manage our forests to the mutual benefit of the local communities as well as the forests themselves.

I am not a forester, so I cannot recommend specific practices, but I encourage you to use your best judgment and experience.

Thank you very much.

Thank you,
