Oregon Department of Forestry,

Now that the smoke has cleared, an urgent and robust recovery effort is needed to remove dead trees from our burned forests. Leaving dead trees standing on the Santiam State Forest only leaves fuel for future fires.

One need only look to the Tillamook and Elliott State Forests and remember the devastating fires they succumbed to 80 years ago to see the value of a robust recovery effort to restore healthy watersheds, recreation, and local communities. Take action today to ensure that our future generation of Oregonians have forests to work in and enjoy.

Thank you,
Charles Volz

Oregon Department of Forestry,

Now that the smoke has cleared, an urgent and robust recovery effort is needed to remove dead trees from our burned forests. Leaving dead trees standing on the Santiam State Forest only leaves fuel for future fires.

One need only look to the Tillamook and Elliott State Forests and remember the devastating fires they succumbed to 80 years ago to see the value of a robust recovery effort to restore healthy watersheds, recreation, and local communities. Take action today to ensure that our future generation of Oregonians have forests to work in and enjoy.

Thank you,
Linda Marshall

Oregon Department of Forestry,

As a native of this state (Oregon) it pains me to see fire damaged forests left to rot. Immediate salvage and replanting is the correct way to manage all federal, state, and private forests. the six year intervals of the Tillamook Burn is a good example of what can happen if the snags and other fuels aren't cleaned up. Please expedite the sale of damaged timber and reforestation of all state lands and encourage as strongly as possible doing the same on federal lands. Time is critical. DON'T DELAY

Thanks you

Oregon Department of Forestry,

As an active motorcyclist for the past 50 years, both on-road and off-road, I have seen more of Oregon's forests than the average person.

The best example of multi-use sustained-yield is the Tillamook State Forest. I have ridden there since the 1970s, long enough to see an entire generation of trees planted, nurtured, thinned, and harvested. The resulting revenue provides jobs in Washington, Tillamook and Yamhill Counties, and also provides much-needed revenue for schools.

There has been ample protection for the Coast Rivers, and trout and salmon are gradually coming back. We have learned a lot about riparian zones.

This June, I also led a group through Ripplebrook and down to Detroit, and on previous off-roadrides, I have seen the Table Rock/Opal Creek/Lyons area. With proper forest management, this area did not have to burn. Unfortunately, many of the access roads have been closed, making it much harder to fight a fire. I have many friends in the Gates/Mill City area, and they are left with nothing unless these forests are planted and actively managed.

I encourage you to get to work, cut the red tape, and create a sustainable forest that will provide both revenues to local communities and multiple-use recreation opportunities.

Thank you,
Richard Campbell

Oregon Department of Forestry,

Having a relationship to forestry related issues, I send this message with strong encouragement. The standing burned timber will not convey any improvement to the State of Oregon unless harvested. Knowing the effects of not harvesting burned areas from the 1990's, I can attest to the fact that more than many industries will be adversely affected. The trickle effect is prominent and will only cause more separation and an unstable economy unless harvests are allowed. Now that the smoke has cleared, an urgent and robust recovery effort is needed to remove dead trees from our burned forests. Leaving dead trees standing on the Santiam State Forest only leaves fuel for future fires.

One need only look to the Tillamook and Elliott State Forests and remember the devastating fires they succumbed to 80 years ago to see the value of a robust recovery effort to restore healthy watersheds, recreation, and local communities. Now that the smoke has cleared, an urgent and robust recovery effort is needed to remove dead trees from our burned forests. Leaving dead trees standing on the Santiam State Forest only leaves fuel for future fires.

One need only look to the Tillamook and Elliott State Forests and remember the devastating fires they succumbed to 80 years ago to see the value of a robust recovery effort to restore healthy watersheds, recreation, and local communities. Take action today to ensure that our future generation of Oregonians have forests to work in and enjoy.

I absolutely agree that it is sad that our beautiful State of Oregon had so much of our forests, especially on Public lands, burned! Now because of those devastating fires everything is all caught up in red tape so recovery is almost impossible to get done! This MUST stop NOW! It is time to recover what we lost!

Now that the smoke has cleared, an urgent and robust recovery effort is needed to remove dead trees from our burned forests. Leaving dead trees standing on the Santiam State Forest only leaves fuel for future fires.

One need only look to the Tillamook and Elliott State Forests and remember the devastating fires they succumbed to 80 years ago to see the value of a robust recovery effort to restore healthy watersheds, recreation, and local communities. Take action today to ensure that our future generation of Oregonians have forests to work in and enjoy.

Oregon Department of Forestry,

As a solid waste company serving in South Tillamook County we understand and experienced the direct effect that these fires had on not only the victims but the ability to have roadways cleared for the safe removal of solid waste and debris. The true environmental impact is what happens when proper reforestation plans are usurped by the lack of true education and experience of past catastrophic events! Learn from these events!

Go to the Native Americans' plan book: clear and clean up and burn debris so that new forest can grow strong and tall!

The only thing that is stopping these horrific events that also kill and drive out our beloved wildlife is ignorance in lawmaking!

Let Oregon be a leader in making the right decisions for our citizens and their property as well as protecting our beautiful forests!

One need only look to the Tillamook and Elliott State Forests and remember the devastating fires they succumbed to 80 years ago to see the value of a robust recovery effort to restore healthy watersheds, recreation, and local communities. Take action today to ensure that our future generation of Oregonians have forests to work in and enjoy.

Thank you,
Sandra Dye

Oregon Department of Forestry,

Replant and reforest NOW!

Now that the smoke has cleared, an urgent and robust recovery effort is needed to remove dead trees from our burned forests. Leaving dead trees standing on the Santiam State Forest only leaves fuel for future fires.

One need only look to the Tillamook and Elliott State Forests and remember the devastating fires they succumbed to 80 years ago to see the value of a robust recovery effort to restore healthy watersheds, recreation, and local communities. Oregon Department of Forestry,

Since 1947 I have travelled over the beautiful Santiam & McKenzie highways always enjoying the great beauty of these areas. This fall I again drove these highways and knew I would never see it restored in my lifetime BUT.....get busy and start the restoration for my grand and great grand children who have been taken to these areas every summer to camp out & have learned to love it dearly. DO NOT DELAY!

Now that the smoke has cleared, an urgent and robust recovery effort is needed to remove dead trees from our burned forests. Leaving dead trees standing on the Santiam State Forest only leaves fuel for future fires.

One need only look to the Tillamook and Elliott State Forests and remember the devastating fires they succumbed to 80 years ago to see the value of a robust recovery effort to restore healthy watersheds, recreation, and local communities. Take action today to ensure that our future generation of Oregonians have forests to work in and enjoy.

Oregon Department of Forestry,

Dear Oregon Department of Forestry Oregon Department of Forestry.

It's time to clear the street of the homeless and put them to work replanting the forests of Oregon. Start a CC program that puts the homeless to work planting trees and clearing the hiking trails in Oregon. That would house, feed and teach them how to work again. Making them a new working class instead of a homeless mess.

This would also get them away from the drugs and booze that put them where they are today. I would rather see my tax dollars spent this way than hiring a bunch of Mexican boarder jumpers to do this same work. Granted there are some of these homeless people that would jump at the chance to do this and others that would be best sent by buss to California where it's warmer and drier.

What do you have to lose with this idea, it's a win win for the working tax payers of Oregon. Round them them up and put them to work or buss then out.

Soylint Green

Thank you,
ROBERT HAMMAN

Oregon Department of Forestry,

Do not listen to these far far leftist. They want to lock up our forests from the public. This group is not thinking of our best interests. Oregon Forest Forever is not interested in helping our forests but to receive moneys to help them close down our forest from us. A truly bad group of people that lies and lies to us on what their plan really is.

Thank you,
Kris Shelton
