- a. Identify the source of stand inventory information. Use the following codes: M = Measure SLI data, I = Imputed SLI data, P = Pre-Cruise Plots, O = other (if other, describe below).
- b. Net Acres have been rounded to the nearest whole acre in this table. Stand that comprise less than one acre of a harvest unit are not reported in this table, so the total "Net Acres" per unit in this table may not equal the total "Net Acres" per unit in table 1.

**Table 3. Additional Stand Information**

Unit	Stand ID	Snags/Acre <sup>a</sup>	Down Wood/Acre <sup>b</sup>	Forest Health		
				SNC	Phellinus	Other <sup>c</sup>
1	40100	0	14	--	--	--
1	40101	1	274	--	--	--
1	40103	2	277	--	--	--
1	40104	0	0	--	--	--

- a. Identify the number of hard snags per acre (decay classes 1 and 2)
- b. Identify the cubic feet per acre of hard down wood (decay classes 1 and 2)
- c. Describe "Other" forest health issue.

- Where feasible, opportunities for snag creation of small to medium diameter trees will be assessed during sale layout.

III. WILDLIFE AND T&E SPECIES CONSIDERATIONS:

Foresters need to request the Biological Survey Tracking Form (BSTF) from the ODF Wildlife Biologist prior to sale layout in order to ensure all T&E related information is complete and understood.

- 1. A portion of the operation is within a NSO Circle or Home:  
☒ No    ☐ Yes, BA required
- 2. Are Surveys for NSO being conducted for any portion of this operation?  
☒ Yes    ☐ No    ☐ Density surveys
  - Note: Two year NSO monitoring surveys done every 5 years with surveys scheduled for 2024 and 2025. No operational surveys required with long range plan.
- 3. Are there any additional considerations (FPA Resource Sites, Species of Concern sites/Plants [from ORBIC<sup>1</sup>])?  
☐ No    ☒ Yes, please describe:
  - Sun Creek, which contains Bull Trout, is immediately adjacent to the sale area but is outside the harvest boundary. There may be potential for stream enhancement by adding large wood to Sun Creek along the eastern border of the sale. The “SOC Plants” layer indicates the possible presence of “Crater Lake rock-cress” along the northern and southern boundaries of sale area. This is currently listed as species of concern and has no legal protection requirements at this time.

IV. PROPOSED MANAGEMENT PRESCRIPTION AND PROPOSED OUTCOME:

Table 4. Partial Cut Prescription (Complete only for Partial Cut Harvests)

Unit	Harvest Type	Harvest Species	Residual			
			Species	TPA	BA	% SDI
1	PC-R	PP WF	PP WF	40	70	--

- **Prescription Considerations:**
  - Harvest in this area is intended to reduce stocking levels while retaining the uneven aged characteristics of the stand. Trees will be individually selected for removal across all age classes. Group selection cuts may be incorporated into the marking prescription if neccessary. Groups will be limited to 2-5 acre patches not to exceed 10% of the total sale area. Highly defective trees will be marked reserved in order to provide snags and down wood for wildlife habitat.
- **Reforestation Considerations:** Post-harvest the group selects will be planted with ponderosa pine. Interplanting of understocked areas will occur as well if needed. The remaining stand will be grown forward with another entry anticipated in approximately 20 years.
