- a. Identify the source of stand inventory information. Use the following codes: M = Measured SLI data, I = Imputed SLI data, P = Pre-Cruise Plots, O = other (if other, describe below).
- b. Net Acres have been rounded to the nearest whole acre in this table. Stand that comprise less than one acre of a harvest unit are not reported in this table, so the total "Net Acres" per unit in this table may not equal the total "Net Acres" per unit in table 1.
- These stands were planted, and small portions of Units 169 and 170 were commercially thinned in 2010 and a portion of Unit 917 was retention cut in 2004.
 - The younger stand ages listed for all three units reflect the small portions of the units that were previously harvested. Although yarding, and some harvest will occur, the younger trees in these acres will not be targeted for harvest.

☐ MMMA (BA required) ☒ None
- Are Surveys for NSO being conducted for any portion of this operation?
☐ No ☒ Density Surveys ☐ Operational Surveys ☐ Combination (Density/Operational)

Notes:

- Are Surveys for MM being conducted for any portion of this operation?
☒ Yes (in progress/completed) ☐ No (Not habitat) ☐ N/A (outside of MM survey zone)

Notes: Surveys conducted in 2022 and 2023 for units 169 and 170. Surveys expire 4/1/2029.

- **Leave Tree Considerations:** Foresters will work with wildlife biologist during sale layout. The following should be considered when determining final leave tree arrangements.
 - **Stand Characteristics:** Prioritize minor species, larger diameter, and open grown trees from previous harvests as part of the retention strategy.
 - **Geotechnical:** Additional wind firm leave trees will be concentrated around the No Harvest Areas within the sale shown on the Exhibit A map. Foresters will evaluate stand and topographic conditions to determine sites appropriate for these buffer areas.
- **Reforestation Considerations:** Following the completion of harvest, the unit will be planted with a mixture of species native to the geographic area.

V. HARVESTING AND ACCESS CONSIDERATIONS:

Table 6. Harvest System and Access Summary

Unit	Harvest System		Slope (%)	Unit Access	Seasonal Access

1. Haul Route: Smith Wright Road, Doe Flats Road, South Fork Cook Creek Road, Cook Creek Road.
 - There are no locked gates on the haul route.
2. Haul Route Condition: Cook Creek will be improved by the FY 2025 Tin Pants timber sale. South Fork Cook Creek Road needs a medium lift of rock from Smith Wright Road up, as well as some brushing and minor road repairs. Smith Wright Road needs light grading and a medium lift of rock to the switchback. Doe Flats Road needs some light to medium grading, spot rocking.
3. Are easements required for the haul route? ☐ No ☒ Yes
 - Cook Creek Road through Oregon State Parks (311.29046).

- **Geotech Review:** Initial geotechnical reviews have been completed, and slope protections have been incorporated into No Harvest buffers shown on the map. Some slope protections are dependent on further field review or on stream surveys that have not yet been completed. Consultation with the Geotechnical Specialist is required during sale layout and as streams surveys are completed in order to determine if additional protections are required.

VIII. RECREATION RESOURCES:

1. Recreation issues/coordination: ☒ No ☐ Yes, please describe:

IX. HISTORIC AND CULTURAL RESOURCES:

1. Has the sale been reviewed by a qualified archaeologist for potential historic or cultural resource presence? ☐ No ☒ Yes

X. SCENIC RESOURCES:

1. Are there scenic resources in the vicinity of this operation that need additional consideration? ☒ No ☐ Yes, please describe:

XI. OTHER RESOURCE CONSIDERATIONS:

1. Has a review of the FLMCS layer determined that any resources not mentioned in the report above need additional planning? ☒ No ☐ Yes
2. Are there any other resources present that need additional consideration? ☐ No ☒ Yes, please describe:
 - **No Harvest (Other):**
 - Unit 169 – Previously harvested areas that may need to be yarded through and/or accommodate landing locations.
 - **Unit Size:** The current sale shapes (Unit 169 and 917) are over 120 acres. There are multiple streams within the sale that require stream surveys. Depending on the results of these surveys the acreage of the sale may drop to below 120 acres. If it does not, modifications will be made to the sale boundaries to ensure compliance with the FPA.
