- Non-Invasive Data Governance - Amazon link so you can see what the cover looks like. You might be able to get it from the State Library. <https://www.amazon.com/Non-Invasive-Data-Governance-Robert-Seiner/dp/1935504851>
- The restaurant kitchen analogy of Data Governance
Leela Richman: (comparing data governance) *to something we can relate to: a restaurant kitchen. Think of data like the ingredients that go into making a meal. There is usually a Head Chef that oversees other kitchen staff as they combine ingredients, use kitchen equipment and put together a meal. We expect them to follow certain health and safety protocols to avoid mishaps like food poisoning.*

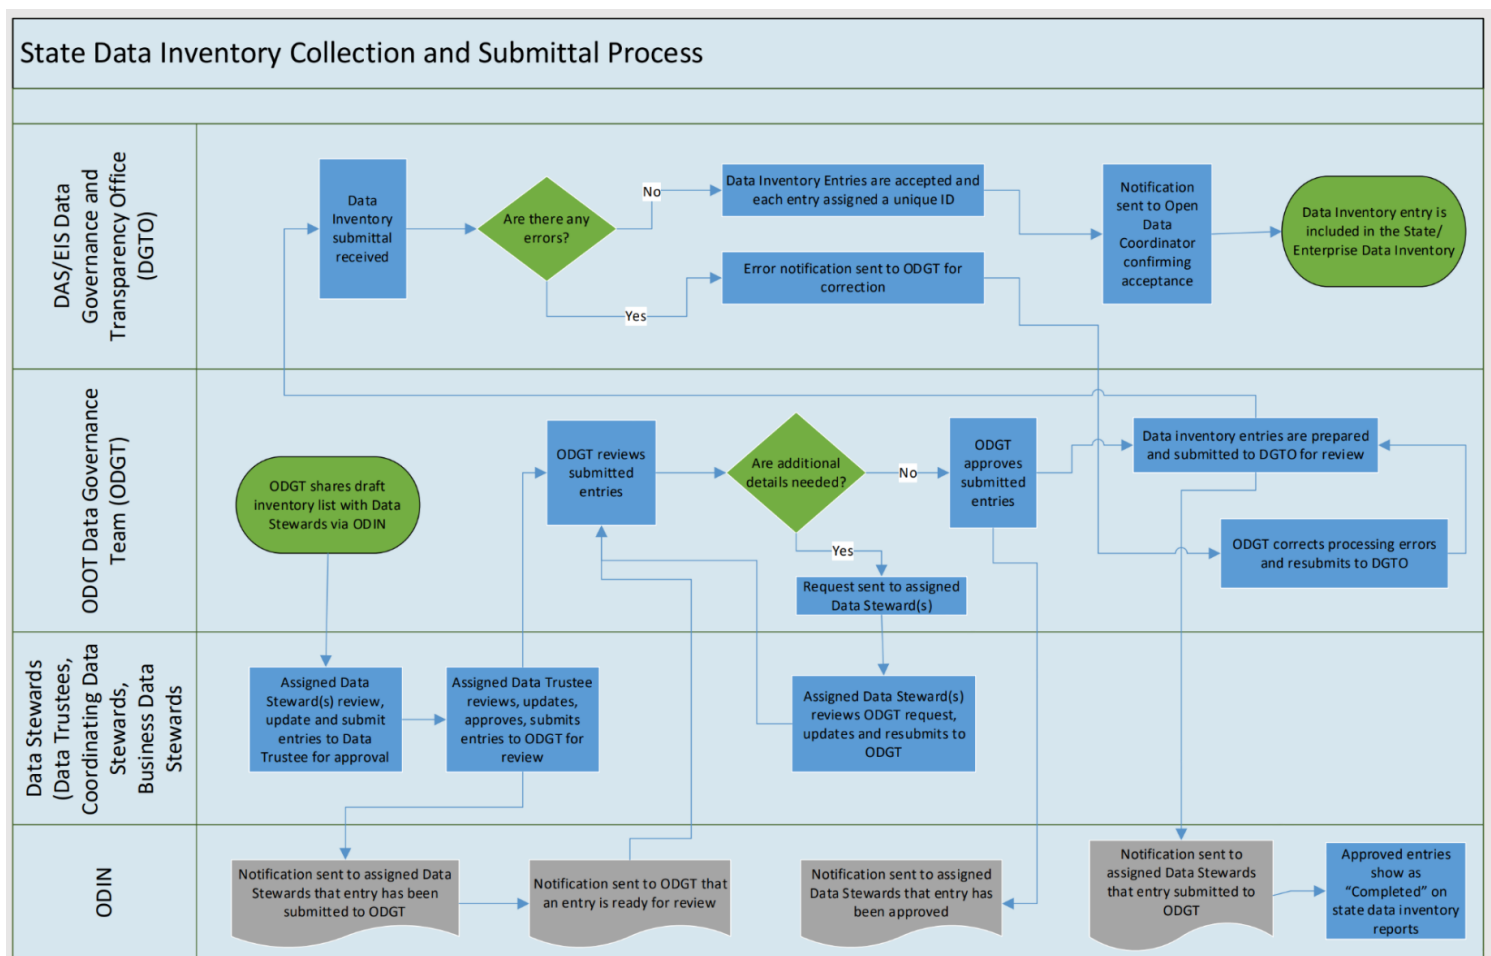

In a good kitchen, we know where the ingredients come from, how to combine them, what tools to use and how and who is doing what. We have ingredients, tools and people working together. Recipes, protocols and clear division of tasks keep the kitchen running smoothly.

Data governance works the same way. It sets out structure, standards and accountability for overseeing data assets.

Data Inventory Resources
