

## Calling all local governments, public education providers and Tribal Nations!

- Do you need help to support local warming or cooling centers?
- Do you need cleaner air spaces the public can use in emergencies?
- Do you need help to upgrade your HVAC smoke filtration system in your public buildings so they can be used as cleaner air spaces?

Grants and other supports are now available to help local governments, public education providers, and Tribal Nations provide:

- cleaner air spaces for emergency purposes, such as when wildfire smoke makes breathing difficult
- cooling and warming spaces for when extreme weather creates unhealthy conditions for people

Grant funds awarded may be used for:

- initial program startup costs
- purchase and installation of air filtration system improvements
- set up and improvement of warming, cooling and cleaner air spaces

**Good news!** A formal application is not required. Eligible entities will enter into an intergovernmental agreement or interagency agreement with ODHS to receive the grant funding or other supports.
