

EXHIBIT E: MINIMUM RAMP RUN MEASUREMENTS

NOTES:

1. Ramps may be of different lengths adjacent to the turn space/landing.

2. Measure the surfaces in 1 to 2 foot increments up and down ramp runs. The number of measurements will depend on surface size of the curb ramp system.

3. Level placements shown are minimums. Specified slopes shall be compliant when measured anywhere on the ramp surface. Take additional measurements where there is a visible irregularity on the surface.

RAMP LENGTH (L)	RUNNING SLOPE	CROSS SLOPE	CROSS SLOPE
< 4'			
4' - 7'			
7' - 10'			
10' - 15'
