1. Introduction

Jacobs performed this Level 1 hazardous materials corridor study (HMCS) for the Oregon Department of Transportation (ODOT) K22985 Northwest Oregon 2024-2027 *Americans with Disabilities Act* (ADA) Curb Ramps Phase 2 Project (project). This report pertains to the Benton and Linn Counties' portion of the project in Corvallis and Philomath, Oregon. Appendix A depicts the project location. The project is located along the following routes:

- Philomath: Route 20 (Main Street) between mileposts 50.81 and 51.85 within Benton County
- Within the central core of downtown Corvallis: Southwest Fourth Street and Southwest Third Street, starting at Oregon Route (OR)-34 at its south end and Northwest Polk Avenue at its north end
- Outside the central core of downtown Corvallis: The intersections of Southwest Tunison Avenue and Southwest Third Street (OR-99W), Southeast Mayberry Avenue and Southwest Third Street, Pacific Highway West (OR-99W) and Northeast Circle Boulevard, OR-99W and Northwest Walnut Boulevard, OR-99W and Northwest Conifer Boulevard, and OR-99W and Northwest Elks Drive
- Outside the city of Corvallis boundary and within Benton County: The intersections of Northeast Seavy Avenue and Route 20 and Northeast Conifer Boulevard and Route 20
- Linn County at the intersection of OR-34 and Peoria Road

The purpose of this HMCS is to identify and evaluate potential sources of contamination along the project corridor that could affect worker safety, property value, and/or project costs. The primary proposed construction activity is installing ADA-compliant curb ramps. Other project elements may include stormwater inlet adjustment, storm sewer adjustment, sign relocation, pedestrian push-button installation, fire hydrant relocation or replacement, lighting relocation or replacement, and minor utility work.

This HMCS includes a review of potential hazardous materials sites located near both design-bid-build curb ramps and design-build curb ramps, which are proposed to be separate construction projects. Appendix A depicts the proposed ramp locations. Whether the proposed ramps are design-bid-build or design-build is based on the best available information at the time this report was prepared and may be subject to change.

2. Corridor Description

The project corridor lies within Corvallis, Oregon, Township 11S, Range 5W, Sections 23, 24, 26, 35, and 36, and Philomath, Oregon, Township 12S, Range 5W, Sections 1, 2, 11, and 14; Willamette Principal Meridian (Appendix A).

The land surrounding the project corridor is a mix of residential, commercial, light industrial, agricultural, and undeveloped land. The elevation of the project corridor ranges between approximately 200 to 230 feet above mean sea level in Corvallis and approximately 260 to 285 feet above mean sea level in Philomath (USGS n.d.) (Appendix A). The topography in the Philomath project area is generally flat but slopes downward toward Newton Creek at the junction of College Avenue and OR-34 and south toward Marys River. The topography in the Corvallis project area slopes downward east toward the Willamette River.

Groundwater depth and flow direction in Philomath was recorded through the Oregon Department of Environmental Quality (ODEQ) leaking underground storage tank (LUST) regulatory files for the Truax Corporation site located at 1914 Main Street (ODEQ n.d.c). According to groundwater monitoring reports associated with the Truax Corporation site, groundwater in Philomath typically flows south to southwest toward Marys River. However, groundwater flow direction in Philomath can vary based on site-specific conditions. Groundwater depths vary seasonally ranging from 4 to 13 feet below ground surface.

Groundwater depth and flow direction in Corvallis were available through several ODEQ Environmental Cleanup Site Information (ECSI) database summaries within the Environmental Data Resources, Inc. (EDR) *EDR Area/Corridor Report* and the LUST regulatory files for the Benton County Crisis Center site (formerly Rich Lindsay Exonn) located at 240 Northwest Fourth Street (EDR 2024a; ODEQ n.d.b). Groundwater in Corvallis typically flows toward the Willamette River but can vary based on site-specific conditions. Groundwater depths vary seasonally ranging from 4 to 20 feet below ground surface.

An in-depth review of ODEQ regulatory files at sites adjacent to proposed ramps may provide more details regarding groundwater flow direction and depths at specific locations.

3. Methodology

ODOT conducts a Level 1 HMCS prior to construction to identify risks associated with hazardous materials. The risks ODOT seeks to mitigate are primarily onsite worker safety, waste management, and disposal costs.

Relative to other ODOT projects, ADA ramp projects have inherently less risk of encountering hazardous materials because of the following characteristics: small disturbance footprints (approximately 1,000 square feet per location); shallow, predictable excavation depths (24 inches) with some exceptions for utilities relocation or adjustments (up to 10 feet); small volume of excavated soil per location (approximately 35 cubic yards); and zero or minimal sliver right-of-way (ROW) acquisition to complete the project (small wedge at corner of property).

This Level 1 HMCS generally follows the procedures outlined in ODOT's *HazMat Program Manual* (ODOT 2020), American Association of State Highway and Transportation Officials criteria for a corridor study, and ASTM International (ASTM) E1527-21 (ASTM 2022) for environmental site assessments. However, this HMCS does not represent an ASTM Standard Phase I Environmental Site Assessment because it excludes property owner interviews and certain record source reviews (for example, property tax files, building department records, and environmental liens), which are of limited value to this project. This HMCS process included hazardous materials database review, historical records review, and site reconnaissance to identify sites of interest (SOIs), which are those sites that may require additional onsite investigations or testing and management of potential contaminated media prior to or during construction.

This Level 1 HMCS data review methodology is proportionate to the relatively low risk associated with hazardous materials for ADA ramp projects when compared with more extensive ODOT roadway projects. Correspondingly, coarser screening criteria were used to identify SOIs in this HMCS than the typical ODOT hazardous materials study process. Subsequently, this HMCS report does not identify some documented hazardous materials sites in federal and state databases along the corridor as SOIs. The user of this report is encouraged to consult Appendix B and re-evaluate the findings of this report after preliminary design but before construction.

The following screening methods were used to filter hazardous materials database results and identify hazardous materials SOIs along the corridor:

- Distance between a hazardous materials site or spill and the construction footprint
    - Dismissed most hazardous materials sites as SOIs if they were not immediately adjacent to an ADA construction footprint.
- Assumed hydrogeologic relationship of the source of contamination to the project
    - Dismissed most hazardous materials sites as SOIs if they were located downgradient from an ADA construction footprint.
- Nature, extent, and status of known or suspected releases into soil, surface water, or groundwater
    - Dismissed most sites as SOIs that lacked confirmed releases. Exceptions include former gas stations or dry cleaners where no documented investigations have occurred.
    - Dismissed database sites as SOIs where only surface spills occurred, such as those reported to the Emergency Response Notification System and Oregon State Fire Marshal. These incidences are typically addressed immediately after notification, and any long-term remediation would be included in other databases, such as ODEQ's ECSI.
    - Dismissed heating oil tanks as SOIs because of the smaller size of the tanks and the lower risk of contamination migrating off the property.

4. Database Review

Hazardous materials databases and historical records were reviewed to identify SOIs along the project corridor. The following subsections summarize the database and records review.

4.1.1 Hazardous Materials Site Database Review

Jacobs contracted EDR to provide available federal, state, local, and tribal database listings, and records for documented hazardous waste sites within the ASTM-recommended search radius of up to 1 mile from the project corridor. A combined *EDR Area/Corridor Report* was requested for Philomath and Corvallis (EDR 2024a; Appendix B). The ODEQ online Facility Profiler (ODEQ n.d.a) was also reviewed.

Section 6 includes the hazardous materials SOIs identified during hazardous materials database review that have potential to impact the project. As discussed in Section 3, many sites were dismissed from review based on their low risk of impacting the project. The SOIs included in Section 6 warrant a closer review to determine whether contaminated media may be located within the construction footprint of proposed curb ramps near the site. Further review may include review of ODEQ regulatory files, subsurface investigations, and/or testing of waste soil or groundwater generated during construction activities.

4.1.2 Historical Records

Jacobs reviewed historical use information to identify previous land uses near the project corridor and assess these uses for potential hazardous materials impacts that may affect project construction. Historical sources listed in the following sections that were readily available and likely to provide useful information given the time and cost constraints of HMCS projects were reviewed. Section 6 lists the hazardous materials SOIs identified from the historical records review. Appendix A depicts these same SOIs.

4.1.3 Aerial Photographs

Jacobs completed a review of aerial photographs dated 1936, 1948, 1955, 1967, 1975, 1982, 1994, 2000-2001, 2005, 2009, 2012, 2016, and 2020 to clarify past land uses (EDR 2024b; Appendix B). The scale and poor quality of the aerial imagery make it difficult to identify specific hazardous materials sites adjacent to the project that were not already identified through EDR database review. Therefore, no specific SOIs were identified as part of the aerial imagery review. However, the aerial imagery confirms the historical presence of commercial properties along OR-34 in Philomath, commercial and industrial areas along OR-99W south of OR-34, and primarily commercial properties along OR-99W north of OR-34. The majority of the SOIs identified in these areas as part of the EDR *Area/Corridor Report* review consist of former or current gas stations (EDR 2024a; Appendix B).

4.1.4 Sanborn Fire Insurance Maps

Jacobs completed a review of Sanborn Fire Insurance Maps available for the year 1912 for downtown Corvallis (Sanborn Map Company 1912). No properties were identified adjacent to proposed curb ramps where hazardous materials use or storage would likely occur. The maps depict the former Portland, Eugene, and Eastern Railroad located along what is currently Southwest B Avenue. The former railroad corridor travels through the project area at Southwest Third Street and Southwest Fourth Street. Although it is possible there were past spills associated with railroad activities, this area is not located within the former railyard between Southwest Sixth Avenue and Southwest Seventh Avenue where substantial spills would be more likely to occur. In addition, the area has been redeveloped into Southwest Avenue B with surrounding residential and commercial property. Therefore, the Portland, Eugene, and Eastern Railroad would not likely impact the project. No SOIs were identified as part of the Sanborn Fire Insurance Maps review.

4.1.5 City Directory Information

Jacobs completed a review of city directories to identify past land uses (EDR 2024c, 2024d; Appendix B). The city directory coverage included the years 1951, 1955, 1959, 1963, 1968, 1973, 1978, 1983, 1988, 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020. The streets reviewed included Northwest Third Street, Northwest Fourth Street, Southwest Third Street, and Southwest Fourth Street in Corvallis and Main Street in Philomath. The search focused on land use with potential for hazardous materials use or storage and sites identified as part of the environmental database review. Most of the potential hazardous materials-related sites identified in the city directories were also identified in the *EDR Area/Corridor Report* (EDR 2024a; Appendix B). City directory review identified four SOIs that were not already listed in other databases. The sites are listed in Section 6 and include potential former gas stations and dry-cleaning operations.

5. Site Reconnaissance and Site Descriptions

Jacobs conducted a site reconnaissance on April 30, 2024, and May 1, 2024. The reconnaissance consisted of systematically traversing the corridor and viewing adjacent properties from roadways and public access areas. Table 1 summarizes potential sources of hazardous substances identified during the site reconnaissance.

Table 1. Potential Sources of Hazardous Substances Identified during the Site Reconnaissance

Potential Sources of Hazardous Substances	Present?
Heating oil tanks	Not Observed

Potential Sources of Hazardous Substances	Present?
ASTs	Yes
USTs, fill and vent pipes, fuel dispensers	Yes
Other hazardous substance containers	Possible (unmarked 55-gallon drums)
Hazardous waste generation	Not Observed
Oil/water separators, dry wells, or floor or storm drains	Not Observed
Septic systems	Not Observed
Stains or odors	Yes
Stressed vegetation	Not Observed
Solid waste	Not Observed
Suspect lead-based paint	Yes
Potential PCB-containing equipment	Yes
Fluorescent or mercury vapor light bulbs	Yes
Treated timbers	Yes
Monitoring wells	Not Observed
Shoulder soil	Yes

AST = aboveground storage tank

PCB = polychlorinated biphenyl

UST = underground storage tank

5.1 Aboveground Storage Tanks, Underground Storage Tanks, Fill and Vent Pipes, and Fuel Dispensers

AST and UST systems were present along the project corridor. The ASTs and USTs were associated with gas stations or fuel suppliers that were identified during database review and listed as SOIs in Section 6 due to past releases and remediation activities. Where the AST or UST systems were visible from the ROW or public property, there was no evidence of a release.

5.2 Other Hazardous Substance Containers

During site reconnaissance, one 55-gallon drum was identified at the Corvallis 76 gas station site (28788 OR-34), and one 55-gallon drum was identified at the Philomath Towne Pump (1841 Main Street). The 55-gallon drum at the Corvallis 76 was unmarked and located on the south side of the building over 100 feet away from proposed ramp construction on asphalt. The drum was in good condition, but there was minor surface staining on the asphalt below the drum. No releases have been documented at this site by regulatory agencies. Because the stains are minor, on pavement, and over 100 feet from the project footprint, it is unlikely to impact the project. However, the stains associated with the 55-gallon drums could be a sign of issues on the property as it relates to poor storage and management

of hazardous materials. Therefore, this site is listed as an SOI in Section 6 and depicted on the figures in Appendix A.

The 55-gallon drum at the Philomath Towne Pump was unmarked but in good condition. The drum is located at the north part of the property approximately 150 feet from the curb ramp construction footprint. No signs of a releases such as stained pavement were identified. Therefore, the 55-gallon drums would not likely impact the project. However, the Philomath Towne Pump is a LUST site and listed as an SOI in Section 6.

5.3 Polychlorinated Biphenyls and Fluorescent or Mercury Vapor Light Bulbs

Pole-mounted transformers and electrical boxes were identified along the corridor near proposed curb ramp construction and may contain PCBs. Electrical boxes and transformers were assumed to be PCB-containing unless marked as PCB-free or coordination with local power companies concludes that equipment is PCB-free.

Light poles (luminaires) were observed along the corridor and may require relocation. The luminaires may contain fluorescent or mercury vapor light bulbs.

5.4 Painted Surfaces

Painted curbs, fire hydrants, and light poles were identified along the project corridor and may contain regulated metals in the paint. Paint waste is subject to regulations under RCRA if the paint contains metals or other hazardous constituents. Treated Timbers

Timber utility poles and signs were observed throughout the project corridor and may be relocated or removed during construction. Timber poles and/or signposts may be treated with creosote or other chemicals.

5.5 Shoulder Soil

Areas of shoulder soil were identified beyond the existing sidewalks but within the ROW, where excavation may occur. Shoulder soil may contain non-point source roadway-related contaminants (metals, petroleum, hydrocarbons) at concentrations that do not meet ODEQ clean fill criteria.

6. Findings

The findings and conclusions were developed based on a review of the hazardous materials database, review of historical resources, and observation during the visual reconnaissance. No high-profile risk sites, such as Superfund or RCRA Corrective Action sites, were identified near the proposed construction activities. The majority of the SOIs are former or existing LUST or petroleum bulk sites, ECSI sites, former automobile service stations, and former dry-cleaning sites. The following is a summary of the findings:

- Twenty-seven SOIs were identified based on the screening methodology discussed in Section 3 and may impact the project. The SOIs may require additional investigation prior to or during construction including regulatory file review, subsurface investigation, geophysical surveys for USTs, and/or testing of potential contaminated waste media generated during construction. Table 2 includes the SOI information, data source, and regulatory status. Table 2 does not include all databases listed in the *EDR Area/Corridor Report* (EDR 2024a; Appendix B)—only sites deemed

relevant for review based on the screening methodology outlined in Section 3. Appendix A depicts the SOI locations.

- Areas of shoulder soil were identified beyond the existing hardscape but within the ROW, where excavation may occur. Shoulder soil may contain non-point source roadway-related contaminants (metals, petroleum, hydrocarbons) at concentrations that do not meet ODEQ clean fill criteria.
- Site reconnaissance identified only one area where there was visual evidence of contamination. Surface staining was identified next to a 55-gallon drum at the Corvallis 76 (28788 OR-34). Although the stains are minor, on pavement, and over 100 feet away from the project footprint, the stains could be a sign of issues on the property as it relates to poor storage and management of hazardous materials. Therefore, this site is listed as an SOI in Table 2.
- Painted roadway curbs, roadway surfaces, and fire hydrants were observed along corridor during site reconnaissance and may be disturbed during construction which may require testing for RCRA-related metals.
- Luminaires identified along the project corridor may contain fluorescent or mercury vapor light bulbs which may require special handling and disposal.
- Electrical equipment, such as pole-mounted transformers and electrical boxes, was identified and may contain PCBs.
- Timber utility poles and signs were observed throughout the project corridor and may be relocated or removed during construction. Timber poles and/or signposts may be treated with creosote or other chemicals.

Table 2. Hazardous Materials Sites of Interest

Site Name	Site Location	Data Source	Regulatory Status
Ladybug Laundry	1736 Main Street Philomath, OR	Dry Cleaners	Site not documented by regulatory agency
Former Taylor Station	1808 Main Street Philomath, OR	LUST (02-13-1100) EDR Hist Auto	NFA

EDR Hist Auto = EDR Exclusive Historic Automobile Stations

NFA = No Further Action

7. Incomplete Information and Data Gaps

This HMCS represents a due diligence effort to identify and evaluate potential hazardous materials relevant specifically to ADA ramp construction where ground disturbance is planned. ODOT Hazardous Materials Section identified the data sources presented in this HMCS as sufficient considering the lower risk nature of ADA ramp construction relative to other ODOT roadway projects. This HMCS did not include review of the following data sources that are common in the hazardous materials investigation industry for transportation projects or property transactions with higher risk:

- Environmental liens
- Property owner interviews
- Property tax files and building department records
- ODEQ records that require a separate public document request process

Even the most rigorous due diligence effort cannot predict all hazardous materials concerns. Construction may encounter unexpected contamination or USTs, which has occurred during other ODOT projects. In the case of spills, even if reported and cleaned up, residual contamination is commonly left at the soil/bedrock interface due to bedrock roughness or under the paved highway shoulder.

The user of this report is encouraged to consult Appendix B and re-evaluate the findings of this report after preliminary design but before construction.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System

JACK SCOVILLE LTD (Continued) **1004769876**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Narrative:
Narrative Id: 4679
Incident Id: 940082
Incident Narrative: A FARM TRUCK (PICKUP) WAS BEING TEST DRIVEN BY AAMCO TRANSMISSION SERVICE TECHNICIAN. TECHNICIAN STOPPED AT STOP SIGN AND MADE A FAST START INTO A RIGHT TURN CAUSING THE ONE GALLON CAN TO FALL AND RELEASE CONTENTS ONTO ROADWAY. PRODUCT WAS IDENTIFIED BY CONTAINER

(Continued) **S106165128**

LABEL AND AN MSDS WAS OBTAIN FROM ANOTHER SOURCE. CORVALLIS FIRE SECURED THE SCENE, IDENTIFIED THE HAZARD AND OBTAINED ASSISTANCE FROM CORVALLIS PUBLIC WORK TO CLEAN-UP SPILL AND CORVALLIS POLICE TO MANAGE TRAFFIC CONTROL. ABSORBANT WAS SPREAD OVER SPILL (RICE HULL ASN) AND ABSORBANT WAS SWEPT UP USING A STREET SWEEPER. PRODUCT IS USED AS A LIVESTOCK MARKING LIQUID WITH MINIMAL HEALTH HAZARDS AND DISPOSED OF AS NON-HAZARDOUS LANDFILL WASTE.

Incident Date: 5/24/1994

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Chemical:

Chemical Name:	MOTOR OIL
Physical Description:	LIQUID
Case Number:	64742547
Facility Id:	015183
Physical State Of The Substance:	2
Average Amount Possessed During The Year Code:	11
Maximum Amount Possessed During The Year Code:	20
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	D
Temperature Description:	STEEL DRUM
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	PETROLEUM HYDROCARBONS
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Combustible Material
Second Hazardous Class Code For Chemical:	Chronic Health Hazard
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.5
Hazard Class 2 Of The Chemical:	6.4
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	Not reported

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Remark:	132 dispatched for an odor investigation. 132 cancelled by 151. 132 cleared and returned to service. 151 requested a code 1 medic unit due to notes from dispatch. 125 dispatched code 1. 117 added to call. 151 arrived made contact with the PR. 151 investigated the car batteries that the Pr was calling about. 151 found nothing leaking or any smells from the batteries. 151 firefighter investigated the tattoo shop and the Auto sales business with the MSA 4 gas monitor. 151 firefighter found no abnormal reading on the 4 gas monitor. 151 made contact with the tattoo shop owner and he denied needing any medical need. 151 cancelled 125. 125 cleared and returned to service. 117 made contact with both business owners. 117 and 151 investigated both shops. The Auto sales offices smelled of cleaning supplies from the owner cleaning. The tattoo shop smelled of fresh paint from the owner painting. 117 cleared and returned to service. 151 spoke with both owners and explain nothing was found and that if they had any other issues to call us back and they understood that. 151 turned the building back over to the owners. 151 cleared and returned to service. 125 responded code one for an odor investigation. 151 canceled 125 prior to arrival. 132 dispatched for an odor investigation. 132 cancelled by 151. 132 cleared and returned to service. See basic narrative. See basic narrative.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Narrative:

NARR ID: 5735353
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (9/27/95 ACV/SAS) The site is a former bulk petroleum facility. Gasoline, diesel fuel, and chlorinated solvents were detected in soil and groundwater at the site. Over 4,000 cubic yards of soil were excavated over a period of three years (1991-1994), with some soil being treated on-site, and some disposed of at the Riverbend Landfill in Yamhill County and the Rebanco Landfill in Roosevelt, WA. Groundwater contamination exceeds federal Maximum Contaminant Levels (MCLs) for benzene, PCE, TCE, and vinyl chloride. Other breakdown products are present. The solvents may originate from the nearby Corvallis Rental property. See ECSI #1750 for more information.

Updated By: MCAMARA
Updated Date: 03/30/2005
Decode for NarcdID: General Site Description
NARR Comments: The former Chevron bulk facility is located at 1225 SE 3rd Street in Corvallis, Oregon. It is bordered on the north by a Southern Pacific Railroad line, on the east by Evanite Corporation and a vacant lot, on the south by Corvallis Rental, and on the west by State Highway 99W/3rd Street and another bulk petroluem facility (Oberson Oil). The former bulk plant is located on a fluvial terrace near the Willamette and Mary's Rivers. One intermittent stream exists along the east site boundary but is stagnant periodically during the year. An old <quot>Millrace<quot> is located approximately 400 feet east of the site and flows from north to south. A surface water intake pond for the Evanite facility is located approximately 500 feet east of the site and fed by the Millrace. Groundwater was encounted between 17 and 20 feet below the top-of-casing (TOC) elevations in monitoring wells on the site. The general groundwater flow direction was toward the northeast.

NARR Comments: (9/27/95 ACV/SAS) Chevron is continuing to monitor the groundwater

CHEVRON BULK PLANT-FORMER (Continued) **S105042483**

for BTEX constituents. The groundwater contamination needs to be addressed, as benzene and solvent levels exceed federal MCLs. The source of solvent contamination should be identified. The sufficiency of the soil cleanup should also be determined. The site priority was ranked a medium using the Site Assessment Prioritization System (SAPS). (9/13/04 M2C/VCP) Chevron is continuing to monitoring MW-4 for BTEX and solvents. In November 2003, benzene was 15 ug/L, toluene was 0.9 ug/L, ethylbenzene was 0.8 ug/L, xylenes was 1 ug/L, TCE was 1 ug/L, cis-1,2-DCE was 56 ug/L, and vinyl chloride was 24 ug/L. It appears that BTEX and solvent constituents are declining over time. However, benzene and TCE are above tap water PRGs. Additional work is required to evaluate the extent of contamination. (1/28/05 M2C/VCP) Monitoring well MW-4 was sampled on March 11, 2004 and December 2, 2004 by SECOR. BTEX and chlorinated solvents continued to be detected. (3/30/05 M2C/VCP) DEQ evaluated the site for current and future impacts to human and ecological receptors. Currently the site is vacant without buildings. There were several drinking water wells in the neighborhood to east. Due to the TCE contamination at Evanite, nearby residents with impacted drinking water wells, have been provided city water. The extent and source(s) of the TPH and solvent plume at the site have not been fully characterized. DEQ compared groundwater concentrations at the one existing on-site monitoring well to screening values for current and future exposures. Benzene, gasoline, diesel, and vinyl chloride (VC) concentrations exceed tap water screening values. Currently there are no drinking waters being used near the site. If residents or on-site occupants begin to use drinking water wells in the future, this pathway should be evaluated. VC concentrations in the one existing monitoring well exceed vapor intrusion screening values for residential, but not occupational, use. Concentrations of contaminants in groundwater could be higher in other areas of the site. Before the site is developed, additional evaluation (a Site Investigation) is needed to determine the actual concentrations of solvents and petroleum constituents in soil and groundwater, whether the source of those contaminants is on-site, and whether the contaminants would pose unacceptable risks to future on-site users and off-site receptors. Because the site is vacant and downgradient drinking water wells have been addressed by Evanite, the current priority for further action is considered by DEQ to be medium. Should the site be developed, the priority would increase to high. (7/19/05 M2C/VCP) The property owner (Ron Laux) would like to build a Honda motorcycle dealership on the vacant lot. Before that can happen the property owner wants a no further action determination from DEQ. DEQ has contacted Chevron requesting additional work to evaluate groundwater and soil contamination. The consultant, SECOR, is preparing a work plan. (12/2/05 M2C/VCP) SECOR provided a work plan on August 16, 2005. They are proposing to install four monitoring wells and collect several rounds of groundwater data to evaluate solvent and TPH contamination. They will also be collecting soil TPH data. This work is scheduled for January 2006. (12/15/06 M2C/VCP) In June 2006 SECOR installed 4 additonal monitoring wells (MW-15, -16, - 17, -18). One round of groundwater samples were collected from the new wells and MW-4 and analyzed for TPH and VOCs (8260). Benzene concentration at MW-16 (5 ppb) was above drinking water RBC of 0.35 ppb. Chloroform concentration at MW-15 (3 ppb) and at MW-18 (1 ppb) was above the drinking water RBC of 0.17 ppb. Soil samples were also collected during the installation of the monitoring wells and at two locations where jet fuel was previously detected.

CHEVRON BULK PLANT-FORMER (Continued) **S105042483**

The samples were analyzed for TPH, VOCs (8260), and MTBE. TPH gasoline, heavy oil, toluene and xylenes were detected in one or more samples. Concentrations were below risk-based screening values. SECOR will do the following remaining tasks: 1) conduct a final groundwater monitoring event in January-April as requested by DEQ; 2) attempt to locate and sample MW-2 during this sampling event; 3) search WRD database to determine the number of residential/irrigation wells within + mile of the site determine if prohibitions are currently in place to prevent the installation of wells onsite; and 4) use BIOSCREEN to model the extent of the local of facility (LOF). (2/20/09 BET/VCS) Completed Staff Report recommending No Further Action; public comment during Jan 09; comments addressed and final report issued as ROD.

NARR Comments: As part of the ROD, the Site requires a deed restriction not allowing resdiential use on site and also not allowing a daycare or children-occupancy type of facility on site due to residual soil contamination above RBCs for residential use. Commercial use is acceptable. A deed restriction was lodged with Benton County in February 09.

NARR Comments: Chevron operated a bulk petroleum storage facility at the site from 1921 through 1981. The facility used six above-ground storage tanks (ASTs) with associated piping, and warehouse building. One underground storage tank (UST), used to contain waste oil, was located at the southeast corner of the main building. In December 1981, Chevron decommissioned the facility by removing the pipes, ASTs, UST, and building.

NARR Comments: (9/27/95 ACV/SAS) The site is adjacent to the Chevron Bulk Plant where petroleum and solvent contamination was discovered. (See ECSI #1749 for more information.) The solvent contamination may originate from the Corvallis Rental site. Corvallis Rental decommissioned an underground storage tank (UST) in 1992 and did not submit appropriate documentation, so the possibility for soil and groundwater contamination at this site has not been determined. The UST decommissioning work was performed by UST Environmental, which was indicted in 1994 for falsifying work.

Remark:	111 and 131 responded in place of 136 for a reported odor of gasoline near SE 3rd St. and SE Bridgeway. 111 and 131 arrived and investigated. 131 and 111 were UTL any odors around the area and into the nearby neighborhood. 111 noted a Shell fuel station across the street and noted no spills in the area. 111 and 131 returned to service. E131 responded emergent to an odor investigation in place of E136 with 111. E131 arrived and was assigned to investigate under the bridge where a gas line runs. E131 found no signs of a gas leak in the area. E131 monitored the area with our 4 gas monitor as well. E131 and 111 UTL. E131 in service.JB 136 dispatched emergent to an odor investigation. 131 was closer and responded in place of 136. 136 cancelled enroute. See Basic narrative.

Incident Id: 080113
Incident Narrative: Dispatched for minor fuel spill/leak. On arrival found 1/2" gas pipe and grade level broken at threads just below where shut off valve was. Broken by excavation. Gas was heard flowing throughout cell, being well dispersed due to wind. Pipe plugged with wood plug and area monitored with aim. Remained on scene until NW Natural rep came on scene and pass down given. 125, 135 in service returning. For more info see form 10 report.

Property Number:	12511CC00100, 12511CC00200, 12511CC00700, 12511CC00800, 12511CC00900
Parcel size:	8.6799999999999997
Latitude:	44.536663686652403
Longitude:	-123.26682800781801
Highlights:	A Phase I ESA of the Property was completed in January 2019. The Property is agricultural, commercial, and residential in use. Tax lot -100 is undeveloped and tax lot -200 is developed with a wood barn built between 1955 and 1967. Tax lot -700 is the only area of the Property developed with a commercial structure, which was also built between 1955 and 1967. Tax lot -800 is developed with a single-family residence built in 1949, shed, detached garage, and carport with an attached garage. Tax lot -900 is developed with a single-family residence, a duplex, garage, and well house. The residence was built in 1947. Tax lots -100, -200, and -700 of the Property were first used for agriculture. Tax lots -800 and -900 were first developed for residential use. Historically, an additional residence was located on tax lot -100 (from at least 1936 to 1982); those on tax lots -800 and -900 are still present and occupied. The commercial building on tax lot -700 served as a heating and sheet metal shop from 1958 through approximately 2014. At the time of the reconnaissance, the building was occupied primarily by a computer hardware company, although the building also included a carpentry shop along with auto body and interior repair operations. The Phase I ESA identified several RECs and recommended further assessment to evaluate the presence of a heating oil underground storage tank, impacts from adjoining industrial sites, and hazardous building materials. A Phase II ESA was completed in August 2020. A heating oil underground storage tank was identified and was removed to allow for assessment of underlying soils. Petroleum impacts were identified in the underlying soil, and the property owner was informed of the requirements to clean up the release. Asbestos and lead paint were identified in property buildings, and the property owner was informed of the findings to help plan for safe demolition of the buildings during redevelopment. No other contamination requiring further assessment or cleanup was identified.

Tax lot -700 is the only area of the Property developed with a commercial structure, which was also built between 1955 and 1967. Tax lot -800 is developed with a single-family residence built in 1949, shed, detached garage, and carport with an attached garage. Tax lot -900 is developed with a single-family residence, a duplex, garage, and well house. The residence was built in 1947. Tax lots -100, -200, and -700 of the Property were first used for agriculture. Tax lots -800 and -900 were first developed for residential use. Historically, an additional residence was located on tax lot -100 (from at least 1936 to 1982); those on tax lots -800 and -900 are still present and occupied. The commercial building on tax lot -700 served as a heating and sheet metal shop from 1958 through approximately 2014. At the time of the reconnaissance, the building

WAKE ROBIN & SW 3RD ST (Continued) **1026464538**

was occupied primarily by a computer hardware company, although the building also included a carpentry shop along with auto body and interior repair operations. The Phase I ESA identified several RECs and recommended further assessment to evaluate the presence of a heating oil underground storage tank, impacts from adjoining industrial sites, and hazardous building materials. A Phase II ESA was completed in August 2020. A heating oil underground storage tank was identified and was removed to allow for assessment of underlying soils. Petroleum impacts were identified in the underlying soil, and the property owner was informed of the requirements to clean up the release. Asbestos and lead paint were identified in property buildings, and the property owner was informed of the findings to help plan for safe demolition of the buildings during redevelopment. No other contamination requiring further assessment or cleanup was identified.

NARR Comments: This site came to DEQ's attention when a sheen on stormwater runoff from the site was reported (Spill #WVR 774). The site is an automobile wrecking yard in southern Corvallis. The source of the release was a catch basin under a covered area adjacent to the parts house. To prevent similar releases from occurring in the future, a catch basin and 550-gallon oil/water separator connected to the sanitary sewer were installed in place of the pre-existing catch basin.

Updated Date: 09/08/2020
Decode for NarcdID: Current Site Summary Statement
NARR Comments: The site was developed as an automotive wrecking yard sometime between 1967 and 1982 and has remained in operation since its construction. In December 1992 during heavy rains a catch basin acting as an oil water separator flooded, releasing collected oil to the surrounding area. Soil and groundwater around the former catch basin have been impacted by the release. The catch basin was removed and a 550 gallon oil water separator was installed and plumbed into the sanitary sewer. Trace levels of petroleum in soil remain beneath the vehicle dismantling building, however significant concentrations of petroleum are seen in the groundwater here. Groundwater impacts do not appear to extend out beyond a roughly 100 foot diameter circular area from the former catch basin. The site is expected to remain a commercial property surrounded by residences all of which are connected to the city water supply. This determination only applies to the historic release from the catch basin that acted as an oil water separator. Due to the nature of wrecking yards there may be other potential sources of contamination that have not yet been investigated. Additional investigation of potential sources of contamination is strongly recommended prior to sale of the property or development of any portion of the property for any use other than a wrecking yard.

Name:	Not reported
Address:	3065 SE 3RD ST.
City,State,Zip:	CORVALLIS, OR 97333
Facility ID:	2016-1595
Incident Status:	Closed
Material:	Oil- Used Oil
Quantity:	500
Unit of Measure:	Gallons
Release Date:	07/05/2016
Description:	Corvallis dispatch reporting a two alarm fire at the B and R Wrecking Yard. Potential for release of various vehicle fluids along with fire suppression water.
Lat/Long:	44.53481 / -123.26620
Source:	Container
Media:	Air, Soil, Pavement, Surface Water
Responsible Company:	B&R Auto Wrecking
Responsible Address:	PO Box 546

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste

B & R AUTO BODY SHOP (Continued) **1004770534**

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Property Number: 12511CB00200, 12511CB00300

2580-2610 SW 3RD ST (Continued) **1026463896**

Parcel size:	0.97999999999999998
Latitude:	44.540813074383898
Longitude:	-123.266379171561
Highlights:	The 0.98-acre Property consists of Benton County tax lots 12511CB00200 (tax lot 200; 2580 SW 3rd Street) and 12511CB00300 (tax lot 300; 2610 SW 3rd Street) and is located on the western side of SW 3rd Street (Highway 99) and just south of SW Prairie Avenue in Corvallis, Oregon. The Property is located within an area zoned by the City as RS-12 (Medium-High Density Residential). Tax lot 200 is developed with a single-family residence (built in 1931). A garage which had been converted into living space was demolished on tax lot 200 in 2016/2017. Tax lot 300 is developed with a single-family residence (built in 1941) and garage. The western portion of the Property is grass-covered with no improvements. A geophysical survey was completed at tax lot 200 in 2016. The survey did not identify underground storage tanks (UST); however, the report indicated that a vertical pipe identified on the north side of the residence may have served a former aboveground storage tank (AST) in the basement, or that a former UST was filled in place at a burial depth that exceeds the capability of the instrumentation used during the geophysical survey. Based on the findings of the geophysical survey, it is likely that a heating oil tank was historically located in the basement. If any USTs are encountered during Property redevelopment, they should be decommissioned in accordance with Oregon Department of Environmental Quality (DEQ) regulations. During the site reconnaissance in October 2019, several car batteries, small quantities of gasoline, antifreeze, automatic transmission fluid, and other auto-related maintenance products/fluids were noted in addition to car parts and old vehicles at tax lot 300. Similar observations were reported in previous environmental reports reviewed as part of this Phase I ESA. The potential for releases to have occurred associated with automotive repair on tax lot 300 were identified as a REC for the Property, and sampling was recommended. Regulated building materials (RBM) such as asbestos-containing building components and lead paint on building components, as well as radon surveys are not within the scope of an ASTM E1527-13 Phase I ESA and these materials have not been evaluated as part of this assessment. However, past environmental assessments completed in 2016 at the Property did identify the presence of asbestos and lead in building materials at the Property. It is recommended that the Property owner retain an appropriately qualified abatement professional to ensure these materials are handled in accordance with applicable regulations during renovation or demolition. A Phase II ESA was conducted in March/April 2020. Analytical results in one soil gas sample indicated a potential area of elevated ethylbenzene and gasoline-range hydrocarbons. Supplemental soil gas and groundwater sampling was conducted to further evaluate the area. No gasoline-range hydrocarbons or ethylbenzene above DEQ standards were detected.

Based on the findings of the geophysical survey, it is likely that a heating oil tank was historically located in the basement. If any USTs are encountered during Property redevelopment, they should be decommissioned in accordance with Oregon Department of Environmental Quality (DEQ) regulations. During the site reconnaissance in October 2019, several car batteries, small quantities of gasoline, antifreeze, automatic transmission fluid, and other auto-related maintenance products/fluids were noted in addition to car parts and old vehicles at tax lot 300. Similar observations were reported in previous environmental reports reviewed as part of this Phase I ESA. The potential for releases to have occurred associated with automotive repair on tax lot 300 were identified as a REC for the Property, and sampling was recommended. Regulated building materials (RBM) such as asbestos-containing building components and lead paint on building components, as well as radon surveys are not within the scope of an ASTM E1527-13 Phase I ESA and these materials have not been evaluated as part of this assessment. However, past environmental assessments completed in 2016 at the Property did identify the presence of asbestos and lead in building materials at the Property. It is recommended that the Property owner retain an appropriately qualified abatement professional to ensure these materials are handled in accordance with applicable regulations during renovation or demolition. A Phase II ESA was conducted in March/April 2020. Analytical results in one soil gas sample indicated a potential area of elevated ethylbenzene and gasoline-range hydrocarbons. Supplemental soil gas and groundwater sampling was conducted to further evaluate the area. No gasoline-range hydrocarbons or ethylbenzene above DEQ standards were detected.

Name:	2580-2610 SW 3RD ST
Address:	2580 - 2610 SW 3RD ST
Recipient name:	City of Corvallis
Grant type:	Assessment
Property Number:	12511CB00200, 12511CB00300
Parcel size:	0.97999999999999998
Latitude:	44.540813074383898
Longitude:	-123.266379171561
Highlights:	The 0.98-acre Property consists of Benton County tax lots 12511CB00200 (tax lot 200; 2580 SW 3rd Street) and 12511CB00300 (tax lot 300; 2610 SW 3rd Street) and is located on the western side of SW 3rd Street (Highway 99) and just south of SW Prairie Avenue in Corvallis, Oregon. The Property is located within an area zoned by the City as RS-12 (Medium-High Density Residential). Tax lot 200 is developed with a single-family residence (built in 1931). A garage which had been converted into living space was demolished on tax lot 200 in 2016/2017. Tax lot 300 is developed with a single-family residence (built in 1941) and garage. The western portion of the Property is grass-covered with no improvements. A geophysical survey was completed at tax lot 200 in 2016. The survey did not identify underground storage tanks (UST); however, the report indicated that a vertical pipe identified on the north side of the residence may have served a former aboveground storage tank (AST) in the basement, or

2580-2610 SW 3RD ST (Continued) **1026463896**

that a former UST was filled in place at a burial depth that exceeds the capability of the instrumentation used during the geophysical survey. Based on the findings of the geophysical survey, it is likely that a heating oil tank was historically located in the basement. If any USTs are encountered during Property redevelopment, they should be decommissioned in accordance with Oregon Department of Environmental Quality (DEQ) regulations. During the site reconnaissance in October 2019, several car batteries, small quantities of gasoline, antifreeze, automatic transmission fluid, and other auto-related maintenance products/fluids were noted in addition to car parts and old vehicles at tax lot 300. Similar observations were reported in previous environmental reports reviewed as part of this Phase I ESA. The potential for releases to have occurred associated with automotive repair on tax lot 300 were identified as a REC for the Property, and sampling was recommended. Regulated building materials (RBM) such as asbestos-containing building components and lead paint on building components, as well as radon surveys are not within the scope of an ASTM E1527-13 Phase I ESA and these materials have not been evaluated as part of this assessment. However, past environmental assessments completed in 2016 at the Property did identify the presence of asbestos and lead in building materials at the Property. It is recommended that the Property owner retain an appropriately qualified abatement professional to ensure these materials are handled in accordance with applicable regulations during renovation or demolition. A Phase II ESA was conducted in March/April 2020. Analytical results in one soil gas sample indicated a potential area of elevated ethylbenzene and gasoline-range hydrocarbons. Supplemental soil gas and groundwater sampling was conducted to further evaluate the area. No gasoline-range hydrocarbons or ethylbenzene above DEQ standards were detected.

Incident Narrative: Vehicle pulling a cattle trailer was north bound on Hwy.99 W when a bracket mounting a gasoline tank broke pulling a fuel line loose. Approximately two gallons of unleaded gasoline leaked into the parking lot of a Safeway store. The vehicle owner repaired the broken fuel line and secured the tank to the vehicle. Corvallis Fire Dept applied absorbent material to the gasoline on the ground. The absorbent material was removed and disposed of by CFD.
Vehicle was a 2008 Chevrolet C4500, Oregon plate E-156285

JOHN'S AUTO REPAIR (Continued) **1006865666**

originating from a nearby auto-repair business. Waste oil and antifreeze contamination is likely in soil. Based on information from the City of Corvallis, the lateral line was likely crushed years ago. The current business owner sends oil to recycle, but has obtained permission from the City of Corvallis to discharge antifreeze. The excavation has been refilled.

Name: CORVALLIS AUCTION YARD
Focus Map: Address: 2415 AND 2535 SE 3RD STREET
18 Recipient name: City of Corvallis
Grant type: Assessment
Property Number: 12511CA00200, 12511CA06100
Parcel size: 6.9000000000000004
Latitude: 44.540835947256099
Longitude: -123.26630239711
Highlights: The 6.9-acre Property consists of Benton County taxlots 12511CA00200 (taxlot 200) and 12511CA06100 (taxlot 100). Taxlot 200 currently contains an approximately 10,048-square-foot dilapidated former livestock auction building constructed in 1952 with attached former shop and former boiler room. A small, dilapidated former hay barn and a shed containing an inactive groundwater production well are also currently located along the central southern taxlot boundary. Some areas of construction debris are present on the eastern portion of taxlot 200, and the remainder of the taxlot is undeveloped and overgrown. Taxlot 100 is a vacant lot with overgrown vegetation and no improvements. A previous Phase I & II ESA indicated the release from a UST removed in 2001, two ASTs, a pole-mounted transformer, asbestos and lead-based paint associated with the structures. Stantec's Phase I ESA for the property also revealed a slaughterhouse at the property and adjoining historical gas station which were both RECs. No analytes were detected in soil, groundwater, or soil vapor concentrations that indicate that a significant release of petroleum or hazardous substances has occurred from the historical operations on or near the Property. Based on this assessment and the planned reuse of the Property for mixed urban residential and commercial use, no indications of unacceptable risk to human health or the environment have been identified. If the planned future use of the Property changes or if groundwater use is anticipated, additional assessment may be warranted. Lead was detected in the composite soil sample from the northwestern area of the Property (AY-SC1) at a concentration slightly above the DEQ clean fill standard. Selenium

CORVALLIS AUCTION YARD (Continued) **1026464082**

was detected at concentrations above the DEQ clean fill/background concentration in each soil sample analyzed. No other metals were consistently detected above the clean fill screening levels, and there is no past use (e.g., copper mining) that would indicate the use or release of selenium. DEQ requires that soil with clean fill standard exceedances that is removed from a site be disposed as a solid waste (e.g., in a RCRA Subtitle D landfill). If soil removal is planned during Property redevelopment, additional assessment is recommended to plan for appropriate handling and offsite disposal of the soil. The Property owner may consider developing a Contaminated Media Management Plan outlining approaches to soil handling and disposal during redevelopment. Former Use: Historical aerial photographs, city directories, and other documents show that both taxlots were developed for residential and agricultural use by the 1930s. Taxlot 200 was developed with a residence and various buildings associated with a livestock auction yard by the 1950s. Taxlot 100 was developed with a residence and several small livestock-related buildings including a slaughterhouse by the 1960s. The auction yard ceased operations in 2001. The buildings on taxlot 100 were demolished between 2002 and 2006. The residence and an approximately 23,000-square-foot livestock building east of the main auction building on taxlot 100 were demolished in 2014.

Name:	CORVALLIS AUCTION YARD
Address:	2415 AND 2535 SE 3RD STREET
Recipient name:	City of Corvallis
Grant type:	Assessment
Property Number:	12511CA00200, 12511CA06100
Parcel size:	6.9000000000000004
Latitude:	44.540835947256099
Longitude:	-123.26630239711
Highlights:	The 6.9-acre Property consists of Benton County taxlots 12511CA00200 (taxlot 200) and 12511CA06100 (taxlot 100). Taxlot 200 currently contains an approximately 10,048-square-foot dilapidated former livestock auction building constructed in 1952 with attached former shop and former boiler room. A small, dilapidated former hay barn and a shed containing an inactive groundwater production well are also currently located along the central southern taxlot boundary. Some areas of construction debris are present on the eastern portion of taxlot 200, and the remainder of the taxlot is undeveloped and overgrown. Taxlot 100 is a vacant lot with overgrown vegetation and no improvements. A previous Phase I & II ESA indicated the release from a UST removed in 2001, two ASTs, a pole-mounted transformer, asbestos and lead-based paint associated with the structures. Stantec's Phase I ESA for the property also revealed a slaughterhouse at the property and adjoining historical gas station which were both RECs. No analytes were detected in soil, groundwater, or soil vapor concentrations that indicate that a significant release of petroleum or hazardous substances has occurred from the historical operations on or near the Property. Based on this assessment and the planned reuse of the Property for mixed urban residential and commercial use, no indications of unacceptable risk to human health or the environment have been identified. If the planned future use of the Property changes or if groundwater use is anticipated, additional

CORVALLIS AUCTION YARD (Continued) **1026464082**

assessment may be warranted. Lead was detected in the composite soil sample from the northwestern area of the Property (AY-SC1) at a concentration slightly above the DEQ clean fill standard. Selenium was detected at concentrations above the DEQ clean fill/background concentration in each soil sample analyzed. No other metals were consistently detected above the clean fill screening levels, and there is no past use (e.g., copper mining) that would indicate the use or release of selenium. DEQ requires that soil with clean fill standard exceedances that is removed from a site be disposed as a solid waste (e.g., in a RCRA Subtitle D landfill). If soil removal is planned during Property redevelopment, additional assessment is recommended to plan for appropriate handling and offsite disposal of the soil. The Property owner may consider developing a Contaminated Media Management Plan outlining approaches to soil handling and disposal during redevelopment. Former Use: Historical aerial photographs, city directories, and other documents show that both taxlots were developed for residential and agricultural use by the 1930s. Taxlot 200 was developed with a residence and various buildings associated with a livestock auction yard by the 1950s. Taxlot 100 was developed with a residence and several small livestock-related buildings including a slaughterhouse by the 1960s. The auction yard ceased operations in 2001. The buildings on taxlot 100 were demolished between 2002 and 2006. The residence and an approximately 23,000-square-foot livestock building east of the main auction building on taxlot 100 were demolished in 2014.

If the planned future use of the Property changes or if groundwater use is anticipated, additional assessment may be warranted. Lead was detected in the composite soil sample from the northwestern area of the Property (AY-SC1) at a concentration slightly above the DEQ clean fill standard. Selenium was detected at concentrations above the DEQ clean fill/background concentration in each soil sample analyzed. No other metals were consistently detected above the clean fill screening levels, and there is no past use (e.g., copper mining) that would indicate the use or release of selenium. DEQ requires that soil with clean fill standard exceedances that is removed from a site be disposed as a solid waste (e.g., in a RCRA Subtitle D landfill). If soil removal is planned during Property redevelopment, additional assessment is recommended to plan for appropriate handling and offsite disposal of the soil. The Property owner may consider developing a Contaminated Media Management Plan outlining approaches to soil handling and disposal during redevelopment. Former Use: Historical aerial photographs, city directories, and other documents show that both taxlots were developed for residential and agricultural use by the 1930s. Taxlot 200 was developed with a residence and various buildings associated with a livestock auction yard by the 1950s. Taxlot 100 was developed with a residence and several small livestock-related buildings including a slaughterhouse by the 1960s. The auction yard ceased operations in 2001. The buildings on taxlot 100 were demolished between 2002 and 2006. The residence and an approximately 23,000-square-foot livestock building east of the main auction building on taxlot 100 were demolished in 2014.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Incident Id:	930181
Incident Narrative:	131 RESPONDED TO REPORT OF SMALL DIESEL SPILL AT 1260 SW 3RD OBERSON OIL INC. UPON ARRIVAL, BENTON COUNTY DEPUTIES HAD SECURED THE SCENE AND SHUT OFF POWER TO FUEL PUMPS. THE #4 DIESEL PUMP HAD LEAKED APPROX 4 GALLONS OF FUEL ONTO THE CONCRETE AROUND IT. THE DIESEL WAS PICKED UP USING ABSORBENT PADS AND GREASE SWEEP. THE CAUSE OF THE LEAK WAS DETERMINED TO BE A CRACKED "BREAK AWAY FITTING". CONTAMINATED ABSORBENT MATERIALS WERE LEFT WITH RESPONSIBLE PARTY TO DISPOSE OF.

NARR Comments: (2011) Jiffy Lube #2570 in Corvallis operates as an automobile service center at the facility known as Minit Lube (due to a previous owner, 4). In 1988, the previous owners constructed this facility which operated as Minit Lube (a.k.a. Super Lube). The Minit Lube facility had a heating oil release in 1989 and initiated cleanup under DEQ s Leaking Underground Storage Tanks (LUST) program in 1992

JIFFY LUBE-CORVALLIS (Continued) **S110638453**

(Log #02-89-4049). Miscellaneous petroleum compounds were released from the facility, which affected soil and groundwater. Five wells were drilled, free product was removed, and groundwater and soil were delineated. The Minit Lube facility submitted a corrective plan of action that was approved by DEQ s LUST program. In 1997, the building was sold and is currently owned by Jackson Thompson of Corvallis and rented to Jiffy Lube.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NARR Comments: Currently there are six different zoning designations within the boundary of the site. Due to the size of the site a number of different zoning designations are expected to remain in the future. Currently, along SW 3rd Street (Highway 99W) are businesses within the site. The businesses are currently zoned either neighborhood community minor or professional and administrative office. Commercial use along the highway is expected to continue into the future. The remaining area of the site contains several different zoning designations however they are all either low or medium density residential designations.

NARR Comments: All soil pathways have been deemed incomplete because there are no known soil impacts and no source or sources have been identified. Groundwater concentrations are below all RBCs for the volatilization to outdoor air, vapor intrusion, and groundwater in excavation pathways. Groundwater ingestion for residential receptors is the primary concern within the study area, however city water is available to the entire study area. There are three known wells that continue to have detectable concentrations of TCE in their water. Two of the wells have taken ownership of the treatment systems that DEQ originally installed in 2001. These property owners have been informed of the monitoring and maintenance needs of these systems. Future risk to these residents is acceptable based on historical information showing the effectiveness of the carbon filtration systems and that the residents will continue to monitor and maintain the filtrations systems themselves. The remaining impacted well is no longer used and that property is connected to the city system.

NARR ID: 5742822

Updated Date: 10/23/2018
Decode for NarcdID: Remedial Action
NARR Comments: In spring 2001, DEQ sampled 21 drinking and irrigation wells on Thompson, Alexander, Debord, Craig, Mayberry, Lilly, Bridgeway, Atwood, Chester, Vera, and Crystal Lake Streets. The groundwater contamination appears to migrate along the groundwater gradient towards the Willamette River. Six of the drinking water wells were contaminated with TCE. One resident hooked up to Corvallis city water and DEQ installed carbon-treatment units on the other five wells. in August of 2004 EPA Region 10 conducted a preliminary assessment to identify the possible source(s) of TCE contamination. EPA determined they would not take further action under CERCLA. DEQ continued to maintain carbon treatment units on impacted drinking water wells until July of 2018. In July of 2018 the remaining two drinking water

MAYBERRY STREET STUDY AREA (Continued) **S106236681**

wells in use with impacts ccepted ownership of the carbon treatment units.

Updated By: CRICHAR
Updated Date: 10/23/2018
Decode for NarcdID: Residual Risk Assessment
NARR Comments: There does not appear to be unacceptable health risk from the solvent contamination within the Mayberry Street Study Area. There are two known impacted residential wells within the study area. Additionally there is one well used for irrigation which had a historical detection of TCE. In a well survey the resident at 630 Chester Ave. indicated the well is only used for irrigation. A sample from this well in 2001 showed TCE was present in the well at a concentration of one microgram per liter (g/L or part per billion). This property is about 500 feet northeast (down gradient) of 570 Bridgeway Ave which has not had detectable levels of TCE for three of the last four years. This indicates the down gradient edge of the contaminant plume is likely up gradient of 630 Chester Ave. Given the limited exposure to potential impacted water only during irrigation and that concentrations across the apparent plume have declined, there is no unacceptable risk from groundwater exposure at this property. The two impacted residential wells owners have accepted the carbon filtration system equipment and are responsible for maintaining the systems that have proven effective at removing the COIs in the groundwater. The systems were originally installed, sampled, and maintained by DEQ. The systems have shown to effectively remove contaminants to below laboratory detection limits. DEQ sent multiple letters to the property owners that DEQ would be discontinuing the maintenance of these filters. The letters informed the owners that city water is available in front of their property and that they could connect to the city water supply, take ownership of the filters, or drink impacted groundwater. The owners chose to take ownership of the treatment systems and be responsible for monitoring and maintaining the systems which eliminate the risk of exposure.

NARR Comments: The site is a large area south of the City of Corvallis and development has occurred over time. A 1913 topographic map indicates the site had one or two buildings present within the vicinity of the site however the land may have been used for farming or as a pasture. Topographic maps indicate that some development occurred especially at the southern end of the site between 1937 and 1942. By 1948 most of the infrastructure that currently exists had been built. Since that time topographic maps and aerials indicate that more lots have been developed and there has been an increase in residential density.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: In 2001, following a request from a resident concerned about their drinking water, their well water was sampled for TCE contamination from a nearby cleanup site. DEQ sampled a total of 23 wells in the area and determined there was another unknown source of the contamination. The exact cause of the area-wide groundwater contamination is unknown. A source of contamination was never identified following a Preliminary Assessment performed by the EPA. Only groundwater in the area is known to be impacted. No soil impacts were identified. In 2001, carbon filtration systems were installed on seven residential wells with impacts exceeding DEQ s residential risk-based concentration for tap water ingestion. Over time, five of the residences connected to municipal water. DEQ monitored and maintained the various filtration systems until 2018. At that time, the remaining two systems were given to the property owners who acknowledged their ownership and responsibility for sampling and maintaining the filtration systems. Groundwater in the area remains contaminated although concentrations have declined to near DEQ s residential screening level. The remaining TCE plume appears to be shrinking based on the available long-term sampling data. There are only two beneficial users of the impacted groundwater and they have filtration systems that remove the contamination. Properties within the study area are expected to remain primarily residential with some commercial property use along SW 3rd Street (Highway 99W). Municipal water is available to every property within the study area. There is currently little beneficial use of the groundwater, which is expected to remain the same or decline in the future. Public notice/opportunity to comment was given to all residents within the study area and the public. No comments on the proposed closure were received during the one-month comment period.

MAIN AUTO BODY INC (Continued) **S110638457**

Decode for NarcdID: General Site Description
NARR Comments: In 1958, the Corvallis branch of the Block and Supply Company called Pumilite was built and opened at 325 Circle Blvd in Corvallis. The business supplied and promoted masonry materials, with emphasis on lightweight concrete block. According to Benton County property records, the property was sold in 1994 to Willamette Greystone and again in 2000 to the current owners, Main Auto Body and Paint. Main Auto Body is listed in ODEQ s Hazardous Waste Site Report as a small quantity hazardous waste generator originating from fractionation/distillation and fuel blending practices. Current data on the facilities waste stream do not include chlorinated solvents, however, these compounds are common in auto maintainence facilities.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

WILSON MOTORS (Continued) **1004769877**

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NARR Comments: Gasoline and diesel were detected in the soil and groundwater samples from all of the borings sampled during a 2013 Phase II Environmental Assessment. Gasoline was the predominant species of petroleum in the samples, particularly in the groundwater samples. The sources of the contamination appear to be limited to two distinct areas. One of the areas is centered on boring B-7, which is the former location of the fuel off-loading pumps. The second area, near boring B-12, is located in an area where there has been no historic fuel storage or transfer. A rail spur that previously provided rail car access to the bulk plant ran through the area in the 1950's, and the contamination may be the result spills along the spur.

NARR Comments: The topography around the subject property is generally level. Regional topography slopes at a very gentle gradient to the southeast, toward the Willamette River. The elevation of the subject property is approximately 250 feet above mean sea level (msl). Existing site features include the auto shop building consisting of the main building with a wood-framed addition on the south side of the building that is used for general storage and radiator testing. A covered, paved area on the south side of the shop is also used for radiator repair. The gravel lot behind the building is used for vehicle storage.

NARR Comments: A Phase I Environmental Assessment report issued in May, 2013 recommended soil and groundwater sampling to ascertain the nature and extent of potential contamination at the facility. During May 2013, twelve direct-push borings were completed around the yard of the former bulk fuel plant and inside the building of the existing automobile repair shop. The sampling focused around the former aboveground bulk fuel tanks, two fueling racks, the former fuel off-loading pumps, a former underground hydraulic vehicle lift, and in locations downgradient of the former bulk oil plant. Soil and groundwater samples were collected from the borings and were analyzed for various petroleum hydrocarbons and related constituents. On January 6, 2015, DEQ entered into a Consent Judgment/Prospective Purchaser Agreement with Willamette Pacific, LLC. Under the terms of the PPA, Willamette Pacific agreed to: 1) remediate the historical petroleum product contamination at the site and 2) provide DEQ an Easement and Equitable Servitude for the site. In-situ remediation was performed by Bioremediation Specialists, LLC during September 2014 (performed in anticipation of receiving a Consent Judgment/PPA) to reduce petroleum hydrocarbon mass in soil to levels that meet the applicable DEQ risk-based concentration cleanup criteria for soil. Treatment areas included the former fuel off-loading pumps and the dedicated rail spur area.

NARR Comments: Tax lot 102 was the site of a bulk fuel distributor from 1926 until the early 1980's. The fuel was stored in four 20,000-gallon above-ground storage tanks located behind the building. The tanks contained, gasoline, diesel and stove oil. Loading and unloading racks were located to the northwest of the tanks and southwest of the building. The tanks were located on thick concrete pads equipped with no spill containment. The current owner, Mr. Walter Malone, purchased the property and distributorship in 1977 and discontinued the

WAUCOMAH AUTO REPAIR (Continued) **S117275277**

distributorship in the early 1980's, when he started Waucomah Auto Repair.

NARR Comments: The site is developed and most recently was being used as an automobile and radiator repair shop by Waucomah Auto Repair. This building historically housed a bulk petroleum distributor beginning in 1926. The eastern portion of the building has a wood floor and dirt crawl space while the western portion is concrete on grade. During September 2014, in-situ bioremediation was performed at the site to reduce residual contamination associated with the former bulk plant. DEQ issued a Certification of Completion for the site on <insert date>.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Remark:	133 was dispatched to a reported propane leak at a propane filling station at Fred Meyer's gas station. 133 arrived on scene to find a medium size Class C motorhome next to the propane filling station. Employees evacuated the 4 gas filling islands on the east side of the station and coned off the area, denying entry to the area. Staff met with 133's crew and advised the motorhome tank had a filling valve malfunction with a one-way valve frozen in the open position and the attendant was unable to disconnect the filling hose and the hose is still under pressure. The attendant advised the filling system is turned off and the motorhome is off with all sources of ignition mitigated. 119 added to the response. 119 established Fred Meyer command. 133 requested one addition engine. 133 stretched handline as safety and approached the vehicle and filling station in full PPE with 4 gas monitor and haz-mat response kit. slight odor of propane in the area the quickly dissipates. 133' found no gas flowing from system or motorhome tank. 131 arrived and mitigation of leak begins. Valve was reset and seated by using wooden mallet to free stuck valve. No pressure left on the system and all connection DC's by staff with no leak detected. 131 released. 119 terminated command and returned. 133 restored apparatus and equipment. remained on scene to insure the vehicle was safe. 133 cleared and returned. 131 requested code 1 at propane incident with 133. 131 arrived, face-to-faced with command and then was released. 131 in service returning. 119 self dispatches to an odor investigation at Fred Meyer Gas. Reports are that there is an RV still hooked up to a large propane tank and the RV tank is malfunctioning. 133 arrives first and reports that there is an RV still hooked up to the tank and there is a faint smell of propane in the area. 133 calls for a second engine prior to my arrival. Upon arrival I establish Fred Meyer Command. 133 is in position to address the issue, in full PPE and SCBA with hose line pulled. 131 arrives and they are given water supply and backup. 133 enters hot zone and mitigates the issue and the incident is under control. No further action is needed. See Basic Narrative.

Remark:	133 dispatched to a fuel spill at the Fred Meyer gas station on NW 9th. Cause of spill was a gas tank leak or hole. Service attendant was able to contain leak from sewer and had a catch basin collecting fuel from tank. 133 augmented spill with ultra sorb. Public works spill team member responded and provided guidance to service station for clean up. Vehicle was towed to Les Schwab on 9th per owners request. 133 assessed for leaking fuel at Les Schwab's, no fuel leak detected.

Remark:	133 dispatched non emergent to a report of a propane leak at a service station which fills propane cylinders. Today a cylinder they were filling was not sealing after removing the fill line. We established a safe area bled most of propane out and attempted to exercise the valve spring with a golf T. We were unable to stop the leak and allowed the tank to completely empty. We used PPV (electric fan) to ventilate the vehicle and under the vehicle. We also used our AIM Monitor to detect any LEL after ventilation. No LEL found and O2 was normal. A firefighter in turn outs started the vehicle and moved it to an area where the owner and family then entered and drove home.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110070330588

Environmental Interest/Information System:
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.

Temperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	PETROLEUM HYDROCARBONS
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Combustible Material
Second Hazardous Class Code For Chemical:	Chronic Health Hazard
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.5
Hazard Class 2 Of The Chemical:	6.4
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	Not reported
EPA Pesticide Registration Number:	Not reported
Contains 112R:	Not reported
Contains EHS:	Not reported
Fertilizer:	N
Pesticide:	N
Contains 313:	Not reported

Chemical Name:	USED MOTOR OIL
Physical Description:	LIQUID
Case Number:	000000
Facility Id:	037306
Physical State Of The Substance:	2
Average Amount Possessed During The Year Code:	10
Maximum Amount Possessed During The Year Code:	11
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	C
Description:	TANK INSIDE BUILDING
Type Code:	D
Temperature Description:	STEEL DRUM
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE

Comments: Not reported

Operations:
Operation Id: 132528
Operation Status: Active
Common Name: Corvallis Disposal Co.
Yrs of Operation: 30 years
Comments: Recycling center; provides curb-side service (recyclables stored on-site in drop boxes); on-site vehicle maintenance (garage with 6 full-time mechanics).

Narrative:

Narrative Id: 5399
Incident Id: 950269
Incident Narrative: CORVALLIS DISPOSAL PICKED UP GARBAGE IN SMALL 1 CU YD SCOOTER AND WHILE TRANSFERRING TO GARBAGE TRUCK, OPERATOR WAS EXPOSED TO VAPOR CLOUD AND NOTICED SMALL FIRE IN THE BACK OF TRUCK INVOLVING PAPER AND TOWEL/COTTON. CORVALLIS FIRE DEPT NOTIFIED VIA 911 TO RESPOND TO CORVALLIS DISPOSAL YARD. ON ARRIVAL THE GARBAGE TRUCK WAS PARKED AND A 30 FT CIRCLE OF ABSORBANT MATERIAL RINGED THE BACK OF THE TRUCK.
THE EXPOSED OPERATOR WAS COMPLAINING OF A HEADACHE AND WAS TOLD TO GO SHOWER/DECON AT THE COMPANY SHOWER AND WENT POV TO GOOD SAMARITAN HOSPITAL FOR OBSERVATION AND CHECK-UP. OREGON POISON CONTROL CONTACTED AND OPERATOR WAS IMMEDIATELY RELEASED AFTER BEING SEEN BY PHYSICIAN. CFD USED AIM 3000 AND MSA 261 PLUS SPYLFYTER CHEMICAL STRIP IN LEVEL D AND SCBA TO PERFORM RECON. ONLY EVIDENCE WAS BROKEN LAB GLASSWARE SIMILAR TO DOUBLE NECKED DISTILLATION VESSEL THAT HAD BOTH OPENING RUBBER STOPPERED AND DUCT TAPED. REDDISH RESIDUE ON INSIDE OF BROKEN GLASSWARE. RECON IDENTIFIED STRONG ACID PH OF RESIDUE. CFD USED 3 FT LONG TONGS TO PLACE BROKEN GLASSWARE IN OVERPACKED METAL DRUM. BASE ON TYPE OF GLASSWARE, PH, COLOR, REACTIVITY, AND OBSERVATIONS FROM OPERATOR AND ADVISE OF LAW ENFORCEMENT UNKNOWN. MOST LIKELY HYDROIODIC ACID. ACTION-NEUTRALIZED WITH WATER AND TRANSPORTED TO LANDFILL TO BE AIR DRIED AND LATER TO BE
BURIED.
ATTACHED REPORT FROM CORVALLIS CFD: 133 RESPONDED TO DISPOSAL COMPA NY FOR A REPORT OF SOMETHING GIVING OFF VAPORS AND "WHITE SMOKE" IN THE REAR OF A GARBAGE TRUCK. INVESTIGATION REVEALED (A) BROKEN GLASSWARE SUGGESTIVE OF A CLANDESTINE DRUG LAB. THE TWO PORTS HAD BEEN SEALED WITH DUCT TAPE. WE ONLY OBSERVED ONE SUCH FLASK AND WERE ONLY ABLE TO IDENTIFY THE CHEMICAL AS AN 'ACID'. TE GLASSWARE AND BURNED ITEMS WERE PLACED IN A METAL CONTAINER WITH ULTRASORB. THE METAL CONTAINER WAS LEFT WITH CORVALLIS DISPOSAL WITH INSTRUCTIONS TO DISPOSE OF IT PROPERLY.

Updated Date: 09/20/2011
Decode for NarcdID: Contamination
NARR Comments: (9/20/11 GMW/VCP) According to PPA application materials, the only known environmental conditions on the property involve the former Campbell s One Hour Cleaners, which operated at this site from 1959 to 1984. In 2003, as part of a due-diligence investigation associated with the purchase of the property, an environmental site assessment of the property was completed. Maul Foster & Alongi, Inc (MFA) installed five temporary borings on the property and collected groundwater samples from 30 and 50 feet below ground surface to investigate potential impacts from the former dry-cleaning operation. Perchloroethylene (PCE); trichloroethylene (TCE); cis -1,2,-dichloroethylene (DCE), and toluene were detected in groundwater samples from four borings installed downgradient of the former dry cleaners. Concentrations ranged from non-detect (ND) to 190 micrograms per liter (ug/L or ppb) for PCE; ND to 83 ug/L for TCE, and ND to 0.90 ug/L for DCE. There was also one detection of toluene at 0.84 ug/L at 50 feet below ground surface. For boring B1, located along the north property line, chlorinated VOC detections varied from 340 to 1,900 ug/L PCE; 6.8 to 320 ug/L TCE; ND to 84 ug/L cis-DCE; and ND to 30 ug/L trans DCE.

NARR Comments: The former Tum-A-Lum Lumber property at 1327 and 1335-1347 NW 9th St. in Corvallis is the location of the former Tum-A-Lum Lumber yard and adjacent retail businesses. The site s buildings are circa 1940s. Based on a review of aerial photographs, the buildings appear to have been constructed between 1944 and 1953. Campbell's One-Hour Cleaners (previously named Fred's Cleaners) operated out of the 1335 NW 9th St. building between 1959 and 1984.

NARR Comments: (9/28/11 GMW/VCP) A prospective buyer of this site has entered DEQ's Voluntary Cleanup Program, with the intention of working with the current owners and getting a better handle on site contamination and possible remedial-action needs. DEQ has concurrently begun crafting a Prospective Purchaser Agreement that will be designed to manage human health risks associated with the site and provide defined liability protection to the prospective purchaser.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [July. 2018] This site came to DEQ's attention in August 2011, when a prospective buyer convened a meeting with DEQ to discuss a possible Prospective Purchaser Agreement and accompaning Voluntary Cleanup Program participation, as a result of apparent releases from a dry-cleaning facility that operated at the site until 1984. On May 23, 2012 a Prospective Purchaser Agreement (PPA) between P&B Pence and the DEQ, in the form of a Consent Judgment, was filed with the Benton County Circuit Court. Pence contributed $30,000 toward cleanup of the site and agreed to redevelop the site. Pence also recorded a deed restriction prohibiting groundwater use at the site and requiring vapor resistant construction for new buildings. Certificate of completion for the PPA was filed with the court on 12/11/2012.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Decode for NarcdID: Contamination
NARR Comments: (1/11/00 PSR) During the RI/FS conducted for the site, all chemicals detected in soil and groundwater were screened to determine the substances that might pose potential risk to human health and the environment. The primary chemicals of concern in soil are dioxins/furans and PCP. The primary chemicals of concern in groundwater are PCP and PCE.

Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: (1/11/00 PSR) This site is the former office headquarters and electrical service and maintenance center of Consumers Power, Inc. (CPI). Operations conducted at the site between 1954 and 1976 included treatment and storage of power poles with a solution containing pentachlorophenol (PCP), servicing electrical transformers, some of which used an oil coolant containing polychlorinated biphenyls (PCBs), and truck repair. The primary contaminants in site soils include dioxins/furans, PCP, and PCBs. The primary contaminants in groundwater are PCP and the halogenated volatile organic compounds perchloroethylene (PCE) and trichloroethylene (TCE).

NARR Comments: (1/11/00 PSR) The exact manner and time of hazardous substance

CONSUMERS POWER INC. (FORMER) (Continued) **S105614115**

releases at the site are not known. It is likely that PCBs were released to site soils as a result of storage and/or maintenance of transformers at the transformer service building and the transformer dock. Treatment of utility poles involved dipping them into a tank of oil-based treating solution containing PCP. It is likely that PCP-containing treating oil was released to site soils as a result of leakage or spillage at the dip tank, drippage from the treated poles at the storage rack, and handling/storage of treating solutions. Dioxins and furans detected in site soils are most likely related to releases of the PCP treating oil, since these chemicals commonly occur as impurities in commercial PCP. Other constituents of the oil-based treating solution found at the site include volatile aromatic hydrocarbons (VAHs), polynuclear aromatic hydrocarbons (PAHs), and total petroleum hydrocarbons (TPH). Halogenated volatile organic compounds (HVOCS) are also present in groundwater beneath the site, including perchloroethylene (PCE), trichloroethylene (TCE), and associated breakdown products. These chemicals are common industrial and commercial solvents and degreasers. The on-site source of these contaminants is uncertain. It is possible that they were used at the CPI site for vehicle or equipment maintenance. Existing data suggests the highest concentrations of these chemicals are originating from an off-site source located upgradient (northwest) of the site.

Updated By: CRICHAR
Updated Date: 11/16/2020
Decode for NarcdID: Site Ownership
NARR Comments: (1/11/00 PSR) The site was formerly owned and operated by Consumers Power. It was sold to Century Properties in December 1998. In April 1999, Century Properties sold part of the site to Prime Commercial Partners. In October or November 1999, Prime Commercial Partners sold its part of the site to Hidden Springs Limited Partnership. Other parcels of the site remain for sale by Century Properties. (1/7/03 AMO/VCS) (MOTT 03/09/2018) The site later spilt into tax lots 10700, 10800, 10801, 01707, and 01704. Triple C Investors purchased tax lots 10700, 10800, and 10801 in 2017. A notice of pending sale from the owner of tax lot 1707 was recevied on 3/9/18 stating that Triple C Investors was buying that tax lot as well with an anticipated sale date of 4/13/18. Oregon State Credit Union owns tax lot 1704.

Updated Date: 12/17/2002
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: (1/11/00 PSR) Based on the reasonably likely future use of the site as a commercial development, the following exposure scenarios were evaluated in the RI/FS conducted for the site. For soils: on-site commercial worker exposed to shallow soils; on-site construction/utility worker exposed to shallow soils; on-site commercial worker exposed to deeper soils (were they to be excavated and left on the site); on-site construction utility worker exposed to

CONSUMERS POWER INC. (FORMER) (Continued) **S105614115**

deeper soils; and off-site resident exposed to wind-born dust from shallow soils generated during on-site construction activities. If contaminated groundwater were to be used by future on-site commercial businesses, or were the contaminants to migrate to off-site water wells, humans could be exposed to the contamination by drinking the water, showering, bathing, etc. However, the CPI site and surrounding properties are served by the City of Corvallis municipal water supply. On-site groundwater is not currently used, nor is it likely to be used in the future, given the City's ordinance requiring the use of municipal water for all new developments. The groundwater beneficial use survey showed the closest groundwater well to be approximately 600 feet south-southeast of the CPI site. This well supplied a motel and residence with potable water; however, the well has now been abandoned and the hotel demolished. PCP contaminateion will not migrate off-site at concentrations exceeding safe levels. HVOC concentrations in groundwater indicate that HVOCs have migrated off-site, although they have not been detected in the nearby motel/residence well. The extent of the HVOCs in off-site groundwater has not been determined.

Updated Date: 11/16/2020
Decode for NarcdID: Remedial Action
NARR Comments: The RI/FS was completed in 1998. The ROD was completed in 1999 and the remedial action (RA) was implemented in 1999. Formerly stockpiled soils were placed in a 7.5-foot deep excavation pit in the southeast portion of the site and capped with a geotextile fabric and 1.5 feet of crushed rock. The site has been thoroughly characterized with samples collected from upwards of 200 locations, over 18,000 tons of impacted soil was disposed of at the Coffin Butte Landfill, and additional soil was stored onsite in a repository.

NARR ID: 5737138
NARR Code: Health Threats
Created By: Not reported
Created Date: 12/17/2002
Updated By: MENGLIS
Updated Date: 08/04/2003
Decode for NarcdID: Health Threats
NARR Comments: (1/11/00 PSR) The maximum individual and cumulative potential excess cancer risk to on-site commercial workers exposed to shallow soils are 1x10^-6 and 5x10^-6 respectively, and therefore below levels of concern. Risk levels to construction/utility workers, although not evaluated quantitatively, would be less than for commercial workers, and are therefore also below levels of concern. The maximum individual and cumulative potential excess cancer risk to on-site commercial workers exposed to soils deeper than 15 feet in PCP area 3 are 3x10^-6 and 1x10^-5 respectively. The maximum individual excess cancer risk of 3x10^-6 exceeds the DEQ acceptable risk level. The maximum individual and cumulative potential excess cancer risk to off-site residents due to exposure to wind-borne dust during construction activities are 1x10^-7 and 5x10^-7 respectively, and are therefore below levels of concern. Based on the results of the risk

CONSUMERS POWER INC. (FORMER) (Continued) **S105614115**

assessment, DEQ considers that potential exposure to deep soils requires additional remedial action to be protective of human health, safety, and welfare. In addition, to assure that site-related groundwater contaminants are not migrating off-site and pose no risk, DEQ believes that additional groundwater monitoring is also required. These actions were required in the Record of Decision (ROD). The Focused Groundwater Beneficial Use Survey showed two PCE plumes beneath the site: a southeastern plume and a northern plume. PCE concentrations beneath the southeastern portion of the property are not likely to migrate to downgradient groundwater users. DEQ is working with the Former Circle 9 Dry Cleaners to establish the nature and extent at their site. It is possible that some or all of the PCE on the northern part of the site originates from the former dry cleaner. Pending result of work at the former dry cleaner, or other information, DEQ will re-evaluate the priority for further work at the site. As discussed in the E&ESs for this site, both tax lots have the following restrictions on use: (1) Soils 0-15 feet may contain hazardous constituents and classified as contaminated media and should be managed according to all applicable waste management regulations; (2) dust control; (3) Prohibited uses to include residential use, agriculture use, and use of any type that would involve regular, long-term exposure to site soils by children. In addition, the E&ES for tax lot 10800 lists the additional restrictions: (1) Soils in the Soil Placement Area are covered with a geotextile fabric and 1.5 feet of crushed rock. No site development activities shall breach the geotextile fabric or disturb the soil beneath the geotextile fabric without written notification to and prior written approval by DEQ.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This project site is a portion of the larger former Consumers Power, Inc. facility, which was used for headquarters and operations/maintenance between 1954 and 1976. In 1979 the facility was demolished and sat vacant until it was redeveloped for commercial use beginning in 1999. Contamination at the site is the result of its historic use as an operations and maintenance facility. This includes power pole treating, transformer and vehicle repair. Soil and groundwater beneath the site are contaminated with pentachlorophenol, PCBs, gasoline, VOCs, diesel, and polycyclic aromatic hydrocarbons (PAHs). The site has been thoroughly characterized with samples collected from upwards of 200 locations, over 18,000 tons of impacted soil was disposed of at the Coffin Butte Landfill, and additional soil was stored onsite in a repository. Lower levels of contaminated soil remain across much of the site at depths less than 15 feet, however soils deeper than 15 feet around the former pole dip tank remain heavily impacted. Groundwater around the former pole dip tank remains impacted but this contamination does not appear to extend offsite. An opportunity to comment on the proposed closure was provided to the neighboring property owners as well as the public. No comments were received in the one-month comment period. On September 21, 2020, an Easement and Equitable Servitudes was recorded on all of

CONSUMERS POWER INC. (FORMER) (Continued) **S105614115**

the property deeds. The EES prohibits residential and agricultural use of the property as well as any beneficial use of groundwater from beneath the properties. Additionally, an approved contaminated media management plan must be followed for all subsurface work on the properties. Most documentation for the Consumers Opwer facility is kept under this file. However some information is also present under Hidden Springs - Tax Lot 1707 (ECSI #3247) and Century Properties - Tax Lot #10600 (ECSI #3243). <a href=<quot>https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=3247&Screen=Load<quot>> Link to Hidden Springs - Tax Lot 1707 site information. <a href=<quot>https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=3243&Screen=Load<quot>> Link to Century Properties - Tax Lot #10600 site information.

Decode for NarcdID: Remedial Action
NARR Comments: The RI/FS was completed in 1998. The ROD was completed in 1999 and the remedial action (RA) was implemented in 1999. Formerly stockpiled soils were placed in a 7.5-foot deep excavation pit in the southeast portion of the site and capped with a geotextile fabric and 1.5 feet of crushed rock. The site has been thoroughly characterized with samples collected from upwards of 200 locations, over 18,000 tons of impacted soil was disposed of at the Coffin Butte Landfill, and additional soil was stored onsite in a repository.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This project site is a portion of the larger former Consumers Power, Inc. facility, which was used for headquarters and operations/maintenance between 1954 and 1976. In 1979 the facility was demolished and sat vacant until it was redeveloped for commercial use beginning in 1999. Contamination at the site is the result of its historic use as an operations and maintenance facility. This includes

CENTURY PROPERTIES - TAX LOT #10600 (Continued) **S106123751**

power pole treating, transformer and vehicle repair. Soil and groundwater beneath the site are contaminated with pentachlorophenol, PCBs, gasoline, VOCs, diesel, and polycyclic aromatic hydrocarbons (PAHs). The site has been thoroughly characterized with samples collected from upwards of 200 locations, over 18,000 tons of impacted soil was disposed of at the Coffin Butte Landfill, and additional soil was stored onsite in a repository. Lower levels of contaminated soil remain across much of the site at depths less than 15 feet, however soils deeper than 15 feet around the former pole dip tank remain heavily impacted. Groundwater around the former pole dip tank remains impacted but this contamination does not appear to extend offsite. An opportunity to comment on the proposed closure was provided to the neighboring property owners as well as the public. No comments were received in the one-month comment period. On September 21, 2020, an Easement and Equitable Servitudes was recorded on all of the property deeds. The EES prohibits residential and agricultural use of the property as well as any beneficial use of groundwater from beneath the properties. Additionally, an approved contaminated media management plan must be followed for all subsurface work on the properties. Most documentation for the Consumers Opwer facility is kept under the Consumers Power Inc. (Former) (ECSI #2092) file. However some information is also present under this file and Hidden Springs - Tax Lot 1707 (ECSI #3247). <a href=<quot>https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=2092&Screen=Load<quot>> Link to Consumers Power Inc. NARR Comments: The RI/FS was completed in 1998. The ROD was completed in 1999 and the remedial action (RA) was implemented in 1999. Formerly stockpiled soils were placed in a 7.5-foot deep excavation pit in the southeast portion of the site and capped with a geotextile fabric and 1.5 feet of crushed rock. The site has been thoroughly characterized with samples collected from upwards of 200 locations, over 18,000 tons of impacted soil was disposed of at the Coffin Butte Landfill, and additional soil was stored onsite in a repository.

Updated Date: 11/16/2020
Decode for NarcdID: Current Site Summary Statement
NARR Comments: This project site is a portion of the larger former Consumers Power, Inc. facility, which was used for headquarters and operations/maintenance between 1954 and 1976. In 1979 the facility was demolished and sat vacant until it was redeveloped for commercial use beginning in 1999. Contamination at the site is the result of its historic use as an operations and maintenance facility. This includes power pole treating, transformer and vehicle repair. Soil and

HIDDEN SPRINGS - TAX LOT 1707 (Continued) **S120538942**

groundwater beneath the site are contaminated with pentachlorophenol, PCBs, gasoline, VOCs, diesel, and polycyclic aromatic hydrocarbons (PAHs). The site has been thoroughly characterized with samples collected from upwards of 200 locations, over 18,000 tons of impacted soil was disposed of at the Coffin Butte Landfill, and additional soil was stored onsite in a repository. Lower levels of contaminated soil remain across much of the site at depths less than 15 feet, however soils deeper than 15 feet around the former pole dip tank remain heavily impacted. Groundwater around the former pole dip tank remains impacted but this contamination does not appear to extend offsite. An opportunity to comment on the proposed closure was provided to the neighboring property owners as well as the public. No comments were received in the one-month comment period. On September 21, 2020, an Easement and Equitable Servitudes was recorded on all of the property deeds. The EES prohibits residential and agricultural use of the property as well as any beneficial use of groundwater from beneath the properties. Additionally, an approved contaminated media management plan must be followed for all subsurface work on the properties. Most documentation for the Consumers Opwer facility is kept under the Consumers Power Inc. (Former) (ECSI #2092) file. However some information is also present under this file and Century Properties - Tax Lot #10600 (ECSI #3243). <a href=<quot>https://www.deq.state.or.us/Webdocs/Forms/Output/FPController.ashx?SourceIdType=11&SourceId=2092&Screen=Load<quot>> Link to Consumers Power Inc.
