1. Introduction

Jacobs performed this Level 1 hazardous materials corridor study (HMCS) for the Oregon Department of Transportation (ODOT) K22985 Northwest Oregon 2024-2027 *Americans with Disabilities Act* (ADA) Curb Ramps Phase 2 project (project). This report pertains to the Yamhill County portion of the project in Dundee and Newberg, Oregon. Appendix A depicts the project location. The project is located along the following routes:

- Oregon Route (OR)-99W between milepost (MP) 23.53 (Southwest First Street) and MP 26.46 (Southeast Parks Drive) in Dundee
- OR-99W (locally signed as First Street, East Hancock Street, and East Portland Road) from MP 24.40 (Northeast Home Acres Road) to MP 21.80 (Brutscher Street) in Newberg and vicinity
- OR-240 between MP 11.04 (North Morton Street) and MP 11.39 (Sheridan Street) in Newberg
- OR-219 between MP 18.35 (North Terrace Drive) and MP 20.10 (Sheridan Street), and between MP 20.63 (South Church Street) and MP 20.90 (North Sitka Street) in Newberg and vicinity
- OR-18 at MP 60.01 (Northeast Wilsonville Road) in Newberg

The purpose of this HMCS is to identify and evaluate potential sources of contamination along the project corridor that could affect worker safety, property value, and/or project costs. The primary proposed construction activity is installing ADA-compliant curb ramps. Other project elements may include stormwater inlet adjustment, storm sewer adjustment, sign relocation, pedestrian push-button installation, fire hydrant relocation or replacement, lighting relocation or replacement, and minor utility work.

This HMCS includes a review of potential hazardous materials sites located near both design-bid-build curb ramps and design-build curb ramps, which are proposed to be separate construction projects. Appendix A depicts the proposed ramp locations. Whether the proposed ramps are design-bid-build or design-build is based on the best available information at the time this report was prepared and may be subject to change.

2. Corridor Description

The project corridor lies within Newberg, Oregon 7.5-minute, Township 3S, Range 2W, Sections 7, 16, 18–20, and 24, and Dundee, Oregon 7.5-minute, Township 3S, Range 3W, Sections 25 and 26; Willamette Principal Meridian (Appendix A).

The land surrounding the project corridor is a mix of residential, commercial, light industrial, recreational, and undeveloped land. The elevation of the project corridor ranges between approximately 200 and 220 feet above mean sea level in Dundee and approximately 150 and 240 feet above mean sea level in Newberg (USGS n.d.a, n.d.b) (Appendix A). The topography in Dundee primarily slopes down to the southeast and toward the Willamette River. The topography in Newberg primarily slopes down to the south toward the Willamette River but also toward Chehalem Creek southwest of Newberg, Hess Creek near central Newberg, and Spring Brook southeast of Newberg.

Groundwater depth and flow direction in Dundee were available through the Oregon Department of Environmental Quality (ODEQ) leaking underground storage tank (LUST) regulatory files for the former Dundee Gas Station site located at 509 Southeast OR-99W (ODEQ n.d.b). According to the Dundee Gas Station files, groundwater in Dundee typically flows east to southeast toward Willamette River, which is expected based on local topography. However, groundwater flow direction in Dundee can vary based on

site-specific conditions. Groundwater depths vary seasonally, ranging from 3 to 7 feet below ground surface (ODEQ n.d.b).

Groundwater depth in Newberg was available through the ODEQ LUST regulatory files for the former U.S National Bank of Oregon site located at 515 East First Street and the former Howard Butler site located at 303 East First Street. According to the LUST files, groundwater depths in Newberg vary seasonally, ranging from 2.5 to 8 feet below ground surface (ODEQ n.d.c, n.d.d). A consistent groundwater flow direction was difficult to identify with available information. Groundwater would likely flow from higher to lower elevations. Within the project corridor in Newberg, groundwater would likely flow toward local surface waters, such as Chehalem Creek southwest of Newberg, Hess Creek near central Newberg, and Spring Brook southeast of Newberg. An in-depth review of ODEQ regulatory files at sites adjacent to proposed curb ramps may provide more details regarding groundwater flow direction and depths at specific locations.

3. Methodology

ODOT conducts a Level 1 HMCS prior to construction to identify risks associated with hazardous materials. The risks ODOT seeks to mitigate are primarily onsite worker safety, waste management, and disposal costs.

Relative to other ODOT projects, ADA ramp projects have inherently less risk of encountering hazardous materials because of the following characteristics: small disturbance footprints (approximately 1,000 square feet per location); shallow, predictable excavation depths (24 inches) with some exceptions for utilities relocation or adjustments (up to 10 feet); small volume of excavated soil per location (approximately 35 cubic yards); and zero or minimal sliver right-of-way (ROW) acquisition to complete the project (small wedge at corner of property).

This Level 1 HMCS generally follows the procedures outlined in ODOT's *HazMat Program Manual* (ODOT 2020), American Association of State Highway and Transportation Officials criteria for a corridor study, and ASTM International (ASTM) E1527-21 (ASTM 2022) for environmental site assessments. However, this HMCS does not represent an ASTM Standard Phase I Environmental Site Assessment because it excludes property owner interviews and certain record source reviews (for example, property tax files, building department records, and environmental liens), which are of limited value to this project. This HMCS process included hazardous materials database review, historical records review, and site reconnaissance to identify sites of interest (SOIs), which are those sites that may require additional onsite investigations or testing and management of potential contaminated media prior to or during construction.

This Level 1 HMCS data review methodology is proportionate to the relatively low risk associated with hazardous materials for ADA ramp projects when compared with more extensive ODOT roadway projects. Correspondingly, coarser screening criteria were used to identify SOIs in this HMCS than the typical ODOT hazardous materials study process. Subsequently, this HMCS report does not identify some documented hazardous materials sites in federal and state databases along the corridor as SOIs. The user of this report is encouraged to consult Appendix B and re-evaluate the findings of this report after preliminary design but before construction.

The following screening methods were used to filter hazardous materials database results and identify hazardous materials SOIs along the corridor:

- Distance between a hazardous materials site or spill and the construction footprint

  - Dismissed most hazardous materials sites as SOIs if they were not immediately adjacent to an ADA construction footprint.
- Assumed hydrogeologic relationship of the source of contamination to the project
  - Dismissed most hazardous materials sites as SOIs if they were located downgradient from an ADA construction footprint.
- Nature, extent, and status of known or suspected releases into soil, surface water, or groundwater
  - Dismissed most sites as SOIs that lacked confirmed releases. Exceptions include former gas stations or dry cleaners where no documented investigations have occurred.
  - Dismissed database sites as SOIs where only surface spills occurred, such as those reported to the Emergency Response Notification System and Oregon State Fire Marshal. These incidences are typically addressed immediately after notification, and any long-term remediation would be included in other databases, such as ODEQ's Environmental Cleanup Site Information (ECSI).
  - Dismissed heating oil tanks as SOIs because of the smaller size of the tanks and the lower risk of contamination migrating off the property.

4. Database Review

Hazardous materials databases and historical records were reviewed to identify SOIs along the project corridor. The following subsections summarize the database and records review.

4.1 Hazardous Materials Site Database Review

Jacobs contracted Environmental Data Resources, Inc. (EDR) to provide available federal, state, local, and tribal database listings, and records for documented hazardous waste sites within the ASTM-recommended search radius of up to 1 mile from the project corridor. A combined *EDR Area/Corridor Report* was requested for Dundee and Newberg (EDR 2024b; Appendix B). The ODEQ online Facility Profiler (ODEQ n.d.a) was also reviewed.

Section 6 includes the hazardous materials SOIs identified during hazardous materials database review that have potential to impact the project. As discussed in Section 3, many sites were dismissed from review based on their low risk of impacting the project. The SOIs included in Section 6 warrant a closer review to determine whether contaminated media may be located within the construction footprint of proposed curb ramps near the site. Further review may include review of ODEQ regulatory files, subsurface investigations, and/or testing of waste soil or groundwater generated during construction activities.

4.2 Historical Records

Jacobs reviewed historical use information to identify previous land uses near the project corridor and assess these uses for potential hazardous materials impacts that may affect project construction. Historical sources listed in the following sections that were readily available and likely to provide useful information given the time and cost constraints of HMCS projects were reviewed. Section 6 lists the hazardous materials SOIs identified from the historical records review. Appendix A depicts these same SOIs.

4.2.1 Aerial Photographs

Jacobs completed a review of aerial photographs dated 1936, 1947, 1952, 1955, 1960, 1970, 1975, 1981, 1994, 2000, 2009, 2012, 2016, and 2020 to clarify past land uses (EDR 2024c; Appendix B). The scale and poor quality of the aerial imagery make it difficult to identify specific hazardous materials sites

adjacent to the project that were not already identified through EDR database review. Therefore, no specific SOIs were identified as part of the aerial imagery review. However, the aerial imagery confirms the historical presence of commercial areas along the project corridor in Dundee and Newberg. The majority of the SOIs identified in these areas as part of the *EDR Area/Corridor Report* review consist of former or current gas stations, an automobile service station, and manufacturing and dry-cleaning operations (EDR 2024b; Appendix B).The aerial imagery depicts a railroad corridor (Portland and Western/Union Pacific) running parallel to OR-99W in Dundee and intersecting the project corridor in Newberg at OR-99W and Hancock Street, OR-240 and Sherman Street, and OR-219 and Illinois Street as far back as the 1930s. Hazardous materials spills associated with railroad operations may have occurred in the past. However, a review of hazardous material databases did not identify spills near curbs ramps that were related to the railroad operations. In addition, it is less likely a spill would have occurred at railroad crossings than a railyard where frequent stops, loading, and unloading materials would occur.

4.2.2 Sanborn Fire Insurance Maps

Jacobs completed a review of Sanborn Fire Insurance Maps available for the years 1912 and 1929–1934 along the project corridor in Newberg (Sanborn Map Company 1912, 1929–1934). The 1929–1934 maps depicted several areas along First Street and Hancock Street labeled as "Gas and Oil." All but one of these sites were identified as a SOI during EDR database review and/or site reconnaissance. The Sanborn Fire Insurance Maps identified an automobile service station with a label "Gas and Oil" located near West First Street. This property is at a similar location to Advanced Diesel Services at 616 West First Street. Based on the past use and current use of the property, this site is identified as an SOI and listed in Section 6. No other properties were identified adjacent to proposed curb ramps where hazardous materials use or storage would likely occur that were not already identified as SOIs.

4.2.3 City Directory Information

Jacobs completed a review of the city directory to identify past land uses (EDR 2024a; Appendix B). The city directory coverage included the years 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020 for East First Street, East Hancock Street, OR-99W, North College Street, North Main Street, and Portland Road. The search focused on land use with potential for hazardous materials use or storage and sites identified as part of the environmental database review. The potential hazardous materials-related sites identified in the city directory were also identified in the *EDR Area/Corridor Report* (EDR 2024b; Appendix B). The city directory review did not identify any SOIs that were not already included the *EDR Area/Corridor Report* or the ODEQ Facility Profiler (ODEQ n.d.a).

5. Site Reconnaissance and Site Descriptions

Jacobs conducted a site reconnaissance on April 23 and 24, 2024. The reconnaissance consisted of systematically traversing the corridor and viewing adjacent properties from roadways and public access areas. Table 1 summarizes potential sources of hazardous substances identified during the site reconnaissance.

Table 1. Potential Sources of Hazardous Substances Identified during the Site Reconnaissance

Potential Sources of Hazardous Substances	Present?
Heating oil tanks	Not Observed
ASTs	Yes
USTs, fill and vent pipes, fuel dispensers	Yes

Potential Sources of Hazardous Substances	Present?
Other hazardous substance containers	Not Observed
Hazardous waste generation	Not Observed
Oil/water separators, dry wells, or floor or storm drains	Not Observed
Septic systems	Not Observed
Stains or odors	Not Observed
Stressed vegetation	Not Observed
Solid waste	Not Observed
Suspect lead-based paint	Yes
Potential PCB-containing equipment	Yes
Fluorescent or mercury vapor light bulbs	Yes
Treated timbers	Yes
Monitoring wells	Not Observed
Shoulder soil	Yes

AST = aboveground storage tank
PCB = polychlorinated biphenyl
UST = underground storage tank

5.1 Aboveground Storage Tanks, Underground Storage Tanks, Fill and Vent Pipes, and Fuel Dispensers

AST and UST systems were present along the project corridor. ASTs and USTs were associated with gas stations or other commercials businesses that were identified during database review and listed as SOIs in Section 6 due to past releases and remediation activities. Where the AST or UST systems were visible from the ROW, there was no evidence of a release.

5.2 Polychlorinated Biphenyls and Fluorescent or Mercury Vapor Light Bulbs

Pole-mounted transformers and electrical boxes were identified along the corridor near proposed curb ramp construction and may contain PCBs. Electrical boxes and transformers were assumed to be PCB-containing unless marked as PCB-free or coordination with local power companies concludes that equipment is PCB-free.

Light poles (luminaires) were observed along the corridor and may require relocation. The luminaires may contain fluorescent or mercury vapor light bulbs.

5.3 Painted Surfaces

Painted curbs, fire hydrants, light poles, and concrete bollards were identified along the project corridor and may contain regulated metals in the paint. Paint waste is subject to regulations under RCRA if the paint contains metals or other hazardous constituents.

5.4 Treated Timbers

Timber utility poles and signs were observed throughout the project corridor and may be relocated or removed during construction. Timber poles and/or signposts may be treated with creosote or other chemicals.

5.5 Shoulder Soil

Areas of shoulder soil were identified beyond the existing sidewalks but within the ROW, where excavation may occur. Shoulder soils may contain non-point-source, roadway-related contaminants (metals, petroleum, hydrocarbons) at concentrations that do not meet ODEQ clean fill criteria.

6. Findings

The findings and conclusions were developed based on a review of the hazardous materials database, review of historical resources, and observation during the visual reconnaissance. No high-profile risk sites, such as Superfund or RCRA Corrective Action sites, were identified near the proposed construction activities. The majority of the SOIs are former or existing LUST or petroleum bulk sites, ECSI sites, former automobile service stations, and former dry-cleaning sites. The following is a summary of the findings:

- Thirty-four SOIs were identified based on the screening methodology discussed in Section 3 and may impact the project. The SOIs may require additional investigation prior to or during construction including regulatory file review, subsurface investigation, geophysical surveys for USTs, and/or testing of potential contaminated waste media generated during construction. Table 2 includes the SOI information, data source, and regulatory status. Table 2 does not include all databases listed in the *EDR Area/Corridor Report* (EDR 2024b; Appendix B)—only sites deemed relevant for review based on the screening methodology outlined in Section 3. Appendix A depicts the SOI locations.
- Areas of shoulder soil were identified beyond the existing hardscape but within the ROW, where excavation may occur. Shoulder soil may contain non-point-source, roadway-related contaminants (metals, petroleum, hydrocarbons) at concentrations that do not meet ODEQ clean fill criteria.
- Site reconnaissance did not identify visual evidence of contamination.
- Painted roadway curbs, roadway surfaces, concrete bollards, and fire hydrants were observed along corridor during site reconnaissance and may be disturbed during construction, which may require testing for RCRA-related metals.
- Luminaires identified along the project corridor may contain fluorescent or mercury vapor light bulbs which may require special handling and disposal.
- Electrical equipment, such as pole-mounted transformers and electrical boxes, was identified and may contain PCBs.
- Timber utility poles and signs were observed throughout the project corridor and may be relocated or removed during construction. Timber poles and/or signposts may be treated with creosote or other chemicals.

Table 2. Hazardous Materials Sites of Interest

Site Name	Site Location	Data Source	Regulatory Status
Shell Oil	204 OR-99W Newberg, OR	LUST (36-95-4054 and 36-07-1437), EDR Hist Auto	NFA
Advanced Diesel Services (past "Oil and Gas" site on Sanborn Fire Insurance Maps)	616 West First Street Newberg, OR	Sanborn Fire Insurance Maps	Site not documented by regulatory agency
Former J.L. Investments, LLC	105 North Main Street Newberg, OR	ECSI (6414)	Suspect site requiring further investigation

EDR Hist Auto = EDR Exclusive Historic Automobile Stations

EDR Hist Cleaners = EDR Exclusive Historic Cleaners (potential dry-cleaning sites)

NFA = No Further Action

7. Incomplete Information and Data Gaps

This HMCS represents a due diligence effort to identify and evaluate potential hazardous materials relevant specifically to ADA ramp construction where ground disturbance is planned. ODOT Hazardous Materials Section identified the data sources presented in this HMCS as sufficient considering the lower risk nature of ADA ramp construction relative to other ODOT roadway projects. This HMCS did not include review of the following data sources that are common in the hazardous materials investigation industry for transportation projects or property transactions with higher risk:

- Environmental liens
- Property owner interviews
- Property tax files and building department records
- ODEQ records that require a separate public document request process

Even the most rigorous due diligence effort cannot predict all hazardous materials concerns. Construction may encounter unexpected contamination or USTs, which has occurred during other ODOT projects. In the case of spills, even if reported and cleaned up, residual contamination is commonly left at the soil/bedrock interface due to bedrock roughness or under the paved highway shoulder.

The user of this report is encouraged to consult Appendix C and re-evaluate the findings of this report after preliminary design but before construction.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

Copyright 2024 by Environmental Data Resources, LLC. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, LLC, or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, LLC or its affiliates. All other trademarks used herein are the property of their respective owners.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Name:	Not reported
Address:	HWY 99W / PROVIDENCE DR
City,State,Zip:	NEWBERG, OR 97132
Facility ID:	2021-1577
Incident Status:	Closed
Material:	Natural Gas
Quantity:	unknown
Unit of Measure:	MCF (natural gas)
Release Date:	06/18/2021
Description:	Hazmat 9 reported a natural gas leak in the area. The line is being shut off and they are not requesting additional assistance. The situation is being handled and did not need a SFM Duty Officer contact. Construction equipment severed a 4-ich natural gas line. The pipeline was leaking for about an hour before it was secured. TVF&R issued shelter in place orders for Newberg Hospital and Providence Newberg Medical Center, but no evacuations were necessary. They got one slight hit on an air monitor at the main entrance of the hospital. Natural gas has now dissipated.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Remark:	E20 found a pickup with a leaking propane cylinder in the bed due to an open valve. E20 closed the valve, righted the cylinder, and asked the RP to allow the tank components to thaw before restoring in the pickup or resuming travel. E20 cleared and returned to quarters.

Environmental Interest/Information System:
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.

NARR Comments: (1/29/2003 JG/LUST) A release was first reported at this facility in March 1991, although there is evidence that contamination was present at the site as early as 1984. DEQ's Leaking Underground Storage Tank (LUST) Program requested that the site be investigated, but no investigation occurred. In August 1997, petroleum contamination was rediscovered in the soil and shallow groundwater during an upgrade of the fuel transfer pipes. An investigation was finally conducted in 1999. As part of the investigation, three groundwater monitoring wells were installed at the site. High levels of contamination were observed in all three wells, with free-product in one of the wells.

NARR Comments: (1/29/2003 JG/LUST) The three groundwater wells continue to be monitored; however, no cleanup has occurred. In January 2002, DEQ determined that the Morris family was financially unable to investigate or clean up the site. DEQ designated Morris Texaco as an Orphan project in June 2002. A combination Site Investigation and Corrective Action Plan was initiated in July 2002. The SI/CAP is on-going. (8/24/10 DEH/CU) DEQ Tanks Program staff oversaw investigation and removal action activities between 2002 and 2010. Removal actions conducted between June and August 2005 by DEQ's Orphan contractor included: 1) Approximately 67 tons of petrolelum contaminated soil were removed from the former Drive Slab (south of dispenser islands); 2) ventilation of volatile organic vapors from beneath the former Drive Slab; 3) and sealing of a floor vault to prevent VOC migration into the building. Free product that had been observed in monitoring wells in the Drive Slab area was not observed following the removal action. In November 2005 DEQ received and reviewed a risk-based proposal for closure. The DEQ Tanks program issued a conditional NFA for the site on June 7, 2010. The NFA required recording of an Easement and Equitable Servitude that: 1) restricts future groundwater usage, 2) restricts the use of the property for residential purposes, 3) restricts new construction south of the existing buildings without vapor mitigation measures, and 4) requires a health and safety plan be developed and implemented if excavation within the three remaining areas of contamination is performed. Details regarding the NFA and associated land and groundwater restrictions can be found in the NFA letter that is included in this database, and in the DEQ Tanks files for USTC #36-91-4079 and USTC#36-97-4233.

NARR Comments: [August 2010] The property, previously known as the Morris Texaco, and currently in business as the Newberg Shell Service Center, has been used as a retail gas station since the 1920s. The property has been in private ownership for over 100 years and is currently owned by Archie Morris. Petroleum contamination was discovered in 1991 when soil and groundwater contamination was observed during the installation of a tree in the public right-of-way (sidewalk) of East 1st Street. A second petroleum release was discovered in 1997 during upgrade work being performed on the three active gasoline underground storage tank systems. Since the 1991 report of contamination, Mr. Morris has conducted multiple investigations to determine the extent of contamination. Between June and August 2005, he had contaminated soil removed from the area with the highest concentrations. On October 26, 2005, DEQ received a report summarizing environmental work performed to date and an evaluation of the risk associated with remaining contamination.

DEQ's Tanks Program granted an NFA for the site in June 2010 with restrictions on future use of groundwater and the property, and proposes to allow the remaining contamination to naturally degrade in place. This conditional NFA also applies to the ECSI site.

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

SOUTH RIVER ROAD SLUDGE DISPOSAL SITE (Continued) **1006852874**

Narrative:
NARR ID: 5740333
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (11/8/00 SMF/SAS) Tannery sludge applied to cropland (to exclude root crops, low-growing fruit, or vegetable crops that are edible raw; no grazing animal contact allowed within 30 days after applications) beginning in 1981. Filbert orchards predominant local crop. Believed to be beam house sludge (alkaline with low metals content - Cr, Pb, Cu, Ni, Cd, Co), although high chromium content sludge may also have been disposed of at site (needs investigation). Some metals may be mobile because of alkalinity. Frontier was required to maintain log of sludge applications (no logs supplied to DEQ, yet).

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Address suggests the site is located near Newberg Sewage Treatment Plant and old and new Newberg Landfills. Depending on exact site location, Willamette River may be 800 to 1000 feet downgradient - along Newberg Pool (area with fish deformities). Chehalem Creek (Willamette River tributary) may be 400 to 1600 feet downgradient. Smaller Chehalem Creek tributaries may be even closer. Depending on exact location, Section may have; 10 domestic wells (Section 30) or 24 domestic wells and 10 municipal wells (Section 29 -this location most likely) or 3 domestic wells (Section 20).

Remark:	E35 was called the report of the odor of natural gas. E35 arrived and was informed by one of the employees that he walked into the kitchen from outside and smelled natural gas. He shut off the gas to the appliances and then evacuated and called 911. E35 arrived and found no odor and found nothing with our gas monitor and determined that when the employee shut off the gas that temporarily solved the leak problem. We advised the employee to keep the gas off and that NW Natural Gas is on their way and that they could look at the equipment for the source of the leak. E35 then cleared the scene.

Facility ID:	2016-0558
Incident Status:	Closed
Material:	Oil - Gasoline
Quantity:	1
Unit of Measure:	Gallons
Release Date:	03/04/2016
Description:	Received notification of a possible gasoline spill at the site of a decommissioned gas station. This morning a crew removed the large in-ground fuel tanks at the old Leif's gas station. When Sean was at the scene he saw standing fluids in the ground and a very strong odor of gasoline. Sean who is part of the cities waste water team is concerned about cleanup and what needs to be done next.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will

1500 E 1ST STREET (Continued) **1018385622**

likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

NARR Comments: (9/27/92 LSK/SAS) On July 2, 1986, a Carson Oil Company trailer overturned on Highway 99W at the west end of Newberg. There were three estimates of the quantity spilled: 3500, 3700, and 3800 gallons. 3500 gallons were recovered. The road was bermed and storm sewers were blocked off to prevent further contamination.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement

PEAVEY OIL CO - NEWBERG (Continued) **1006849178**

programs, including incident tracking, compliance assistance, and compliance monitoring.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (1/20/2000 GMW/SAS) During an underground storage tank (UST) investigation at the site, solvents were found in groundwater, apparently resulting from a small waste-oil UST that was removed in 1987. Soil samples from around this tank, collected at 5, 10, and 15 feet depths, contained petroleum hydrocarbons and BTEX compounds, as well as the chlorinated solvents PCE and TCE. It is not clear what contaminants were found in groundwater, nor how the groundwater sample was collected. Contaminated soil was removed from this area, but no confirmatory sampling occurred, and some contaminated soil was apparently left in place in an inaccessible area. A 1997 groundwater sample collected by a consultant for the site owner, analyzed for VOCs via EPA Method 8010, contained BTEX; no chlorinated compounds were detected, however.

NARR ID: 5735974
NARR Code: Remedial Action
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 02/15/2007
Decode for NarcdID: Remedial Action
NARR Comments: (6/6/2001 BTM/SAS) A Targeted Brownfield Assessment was completed at the site in May 2001. DEQ collected soil and groundwater samples from 11 boreholes at the site in March 2001. Various soil samples contained benzene, toluene, ethylbenzene, and xylenes (BTEX), other hydrocarbons, chlorinated solvents, and the pesticides dieldrin and lindane. However, only one sample location contained any of these compounds above risk-based screening levels. Groundwater samples contained moderate VOC concentrations in four locations around the former sumps, hoist, and tank pit. DEQ recommended removal of contaminated soil from several locations on-site, and further evaluation of possible groundwater risks and resulting remedial strategies. The City of Newberg decided to acquire the property as part of a long-term plan to establish a <quot>Yamhill Showcase<quot> downtown commercial district. (2/15/07 GMW/SAS) DEQ's Tanks Program has closed this site using risk-based standards; this no further action determination applies to this ECSI site as well.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System:

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

GEROME MANUFACTURING (Continued) **1000334620**

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D004
Waste Description: Arsenic

Waste Code: D006
Waste Description: Cadmium

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

GEROME MANUFACTURING (Continued) **1000334620**

Waste Code: F019
Waste Description: Wastewater Treatment Sludges From The Chemical Conversion Coating Of Aluminum, Except From Zirconium Phosphating In Aluminum Can Washing When Such Phosphating Is An Exclusive Conversion Coating Process.

FINDS:
Registry ID: 110000816966

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D039
Waste Description:	Tetrachloroethylene
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon’s environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System

NEWBERG CHRYSLER JEEP DODGE (Continued) **1004769896**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

NEWBERG BODY & PAINT INC (Continued) **1004770187**

Environmental Interest/Information System:

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Decode for NarcdID: Manner of Release
NARR Comments: The amount of contamiantion is relatively small. THis is likely the accumulation of years of facility operation and small spills, drips, or leaks. The exact cause of contamiantion is unknown, however, a long time employee repted that atleast on spill (unknown volume) of PCE occured in the mid-1980s due to a break in a hose from a solvent delivery truck.

Decode for NarcdID: Media Contamination
NARR Comments: Soil and Groundwater were tested in July 2011 and found to contain tetrachloroethylene (PCE) and/or trichloroethylene (TCE). Sampling in 2020 confirmed trace level concentration of solvents in soil and soil gas. Groundwater contained low concetrations at the south side of the building with a small plume expected to extend partly beneath Highway 99.

Decode for NarcdID: Remedial Action
NARR Comments: The site was thoroughly investigated. Low levels of PCE and TCE are present in soil, groundwater and soil gas beneath the southern portion of the site and the adjacent property to the southeast. Concnetrations are well below all occupational RBCs.

Decode for NarcdID: Site History
NARR Comments: Reportedly, the current building was constructed in about 1978 as a dry cleaner and laundromat. Prior to that, the area appears to consist of residential or commercial building along Highway 99. A new dry cleaner machine was installed around 1985 that likely had condensate. A long time employee reported that one spill of unknown quantity did occur in the mid-1980s due to a break in a hose from a delivery truck. Tetrachloroethylene (Perchloroethylene, PERC, or PCE) was used until about 2003 when the facility switched to greener solvent.

Updated Date: 07/08/2020
Decode for NarcdID: Current Site Summary Statement
NARR Comments: The site was redeveloped into a dry cleaner and laundromat in about 1978 from was appeared to be a residence in historic aerial photographs. Eventually the laundromat operation ceased and dry clean operations expanded within the entire building. The exact cause of contamination is unknown, however a longtime employee reported that there was at least one solvent spill in the mid-1980s from a broken hose on a solvent delivery truck. Soil, groundwater, and soil gas within the vicinity of the southern portion of the building are contaminated with the dry cleaning solvent tetrachloroethylene and related solvents. Soil impacts remain from about one foot below ground in a utility trench within the building to a depth of about 16 feet below ground south of the dry cleaner building. The levels of contamination are below DEQ s acceptable risk levels. Groundwater contamination is present in the same area at levels exceeding DEQ s risk based concentrations for tap water, and appears to extend beneath a portion of Highway 99 at an average depth of about 16 feet below ground. There are, however, no known beneficial uses of groundwater in the vicinity of the site. The site and surrounding properties are expected to remain commercial and connected to the city water system. An opportunity to comment on the proposed closure was given to the neighboring property owner and the Oregon Department of Transportation. No comments were received within the comment period.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The Resource Conservation and Recovery Act Information System

CONOCOPHILLIPS 05458 (Continued) **1004771173**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Updated By: EKELLEY
Updated Date: 02/13/2014
Decode for NarcdID: Contamination
NARR Comments: (7/26/10 KJR/SAS) Soil and gw sampling have documented releases of PCE to the subsurface. The site used PCE for dry cleaning from 1981 to 2004 and is now a dry store. In April 2009 DEQ performed a PA with limited sampling. Four soil borings were advanced. One groundwater sample was collected from temporary well points placed in each soil boring. A duplicate groundwater sample was collected from boring SB-3. Concentrations of PCE and trichloroethene (TCE) were detected in groundwater samples from all four borings and the duplicate at levels ranging from 26.7 ug/l to 2,750 ug/l and 5.0 ug/l to 155 ug/l, respectively. Concentrations of cis 1,2-dichloroethene (cis-1,2-DCE) were detected in groundwater from borings SB 1, SB-3 and the duplicate of SB-3 at levels of 89.2 ug/l, 6.2 ug/l, and 6.8 ug/l, respectively. (4/13/14 ELK) In August of 2011 the adjacent site, Scharff Motor Freight , had an environmental assessment done by AMEC. The assessment was in regard to on site contamination from underground storage tanks, above ground storage tanks, a shop drain, and off site impacts from the Newberg One Hour Cleaners Site. To address possible impacts from chlorinated solvents released from neighboring dry cleaner facility, soil from boring GP1 was sampled at 13-14 feet bgs and analyzed for petroleum hydrocarbons and groundwater was collected at approximately 21 feet and analyzed for hydrocarbons and VOCs. Petroleum hydrocarbons were not detected in the samples. The VOCs in groundwater showed PCE at 58.5 ppb, TCE at

NEWBERG ONE-HOUR DRY CLEANING (Continued) **S106386211**

51.4 ppb, cis-1,2-DEC at 4.38 ppb, and 1,1-dichloroethene at 0.550 ppb. Based on information that chlorinated solvents were never used at the Site, the assumed groundwater flow direction, and recent site assessment by DEQ of the drycleaners, DEQ concurred with the consultant that chlorinated solvent contamination was coming from an off-site source (Newberg One-Hour Cleaners).

NARR Comments: [July 2010] The Newberg One Hour Cleaners site is located at 2316 Portland Road in Newberg, Oregon. The 0.9 acre property has two buildings with retail tenants. The Newberg One Hour Cleaners is located in a stand alone 1,260 square foot building in the northwest corner of the property. A second 7,920 square foot building occupies the eastern portion of the property and has one retail vacancy and five tenants (Asian Bistro, Enterprise Rent-a-Car, French Twist Salon, Nails by Cheryl, & the Puppy Playhouse). The remainder of the site is a paved parking lot and landscaping.

Updated By: EKELLEY
Updated Date: 02/13/2014
Decode for NarcdID: Remedial Action
NARR Comments: (4/19/06 MP/NWR) Over 2.5 mg/L PCE was detected in shallow groundwater beneath the site. Specific source area has not been established, but could be from surface releases both inside and outside of the building. There are no structures over the area immediately downgradient of dry cleaners building, although groundwater flow direction has not been established. Extent of groundwater contamination should be investigated. Priority for further action: Medium. (7/26/10 KJR/SAS) a PA with limited sampling was completed at the site in July 2010. Sampling was performed in April 2009. PCE was confirmed in soil and groundwater samples. Additional assessment is needed. (4/13/14 ELK) Because of the recent site assessment done to the adjacent, presumed down gradient location (Scharff Motor Freight) and adjustment to the RBCs for TCE and PCE (June 7, 2012), the contamination from this site appears to be sufficiently delineated and appears to have levels of contamination below all applicable DEQs risk based criteria for future site workers, construction workers, or excavation workers and the environment.

NARR ID: 5752357
NARR Code: Water Use (Current/Reasonably Likely)
Created By: KROBERT
Created Date: 07/26/2010
Updated By: KROBERT
Updated Date: 07/26/2010
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: [July 2010] The City of Newberg is located in the Willamette River Basin and the Chehalem Watershed. The Willamette River is located south of the city. The primary groundwater aquifers are located in the Lower Marine Sedimentary/Troutdale Formation and the CRBG. Wells drilled in the valley range in depth from 45 feet to 240 feet bgs with an average depth of 140 feet bgs. Wells drilled in the marine rocks to depths greater than 200 feet bgs generally produce water that is not desirable. Multiple domestic, municipal and community water systems utilizing groundwater are located within a 4-mile radius of the site. Groundwater was encountered at the site at depths ranging from 12 feet to 17 feet bgs. A release of hazardous substances was documented at the site through the detections of PCE and associated breakdown products in groundwater. Based the distance between the site and drinking water wells, depth to groundwater aquifers used for domestic/municipal uses, and the city ordinance prohibiting the installation of wells for potable use, drinking water users within the 4-mile radius are considered secondary targets.

NEWBERG ONE-HOUR DRY CLEANING (Continued) **S106386211**

Decode for NarcdID: Site History
NARR Comments: The dry cleaning equipment was installed by Newberg Dry Cleaners in 1981. The site changed names to Newberg One Hour Cleaners in 1985. Based on Hazardous Waste Compliance Reports, the site was an operating dry-cleaner until 2004. The last time that PCE was purchased for the facility was in March 2004. The site is currently a dry store<quot> which is a facility that receives clothing but has the dry cleaning performed at another location. The business has changed hands several times since 1981. The current operators (Danny and Meredith Cho) purchased the business in 1993. Quadrant Investments LLC purchased the property in 2006 from Mr. Doug Peterson who purchased the property in 2001. The property was owned by Mr. Roger Crowell in 1999.

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110070326065

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
Registry ID: 110071311934

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Hazardous Waste Summary:
Waste Code: D001

NEWBERG FORD (Continued) **1000162710**

Waste Description: Ignitable Waste

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Chemical:

Chemical Name:	NITROGEN
Physical Description:	GAS
Case Number:	7727379
Facility Id:	121588
Physical State Of The Substance:	3
Average Amount Possessed During The Year Code:	04
Maximum Amount Possessed During The Year Code:	11
Applicable Unit Of Measure Code:	3
Description Of The Unit Of Measure:	CUBIC FEET
Type Code:	A
Description:	ABOVEGROUND TANK
Type Code:	L
Temperature Description:	CYLINDER
Pressure of Code:	2
Pressure Description:	GREATER THAN NORMAL PRESSURE
Pressure of Code:	2

12TH & MAPLE WINE CO BULIDING 5 (Continued) **S123797978**

Pressure Description:	GREATER THAN NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	50-199
Most Hazardous Ingridient:	NITROGEN
United Nations/north America 4 Digit Class Number:	1066
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Non-flammable Gas
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	2.2
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soil is a silt-loam; topography is flat with poor drainage. Hess Creek (0.25 mile west) is used for recreational purposes. A shallow aquifer may be used for drinking water, so that the potential pathway of greatest concern is groundwater.

NARR Comments: Investigation and Remediation USTs The USTs on the north portion of the Site and 2500 cubic yards of petroleum contaminated soil (PCS) were excavated in September 1991. The USTs were recycled by the decommissioning contractor (On-Line Construction). With DEQ s approval, the PCS was treated and later reused on Site for leveling and landscaping purposes. Groundwater was sampled from the UST pit in boring B6 after removal of the tanks and showed elevated levels of volatile organic compounds (VOCs). Further groundwater sampling was later conducted in 2011 in boring GP2. Only the VOC toluene at 2.72 parts per billion (ppb) was detected in the sample. Further groundwater delineation occurred in January 2012 with borings ICP-1 and ICP-2. Levels of contamination in groundwater from these borings were below applicable RBCs. Sampling results are summarized in Appendix B. Shop Drain Area Also in September 1991, the buried drum, piping, and 20 cubic yards of contaminated soil from the shop drain area were removed. Later, the shop building was demolished and another 320 cubic yards of PCS were removed from the area. Soils were stock piled separately from those of the UST tank pit, and disposed at Hillsboro Landfill. After soil removal from the shop drain area, four samples (C3-S3N, C3-S4N, C3-S1S, and C3-S2S) were taken. Contamination levels ranged from 40 to 420 parts per million (ppm) for petroleum hydrocarbons. The detected hydrocarbons were primarily from the heavier range since gasoline levels were below 27 ppm. Soil was further characterized in borings ICP-3, ICP-4, and ICP-5, which were non-detect for petroleum range hydrocarbons and VOCs. Initial groundwater sampling near the shop drain area (boring B2) indicated elevated levels of VOCs. Further delineation of the groundwater (GP3, ICP-4, and ICP-5), showed only limited amounts of toluene ranging from 1.7 to 4.12 ppb. Soil and groundwater data is summarized in appendix B. ASTs Surface staining was observed near the ASTs and behind the shop building during their removal in 1991. Initial borings B1, B3 and B4 were used to address surface staining areas. All soil samples were collected and tested from 5 feet below ground surface (bgs). Boring B1 had the highest level of contamination with Total Petroleum Hydrocarbons of 21ppm. Groundwater samples were collected from the three borings at approximately 10-12 for and analyzed for VOCs. Only B1 had an indication of contamination with 0.17ppb for 1,1,2-trichloroethane. In the 2011 site assessment, soil was sampled from GP5 at approximately 10-11 feet bgs for diesel.

SCHARFF MOTOR FREIGHT (Continued) **1006857644**

Results indicated 38.8 ppm for diesel and 251 ppm for heavy oil. The surface of site was reported to have been scraped to 6 inches below surface and leveled, and then was asphalted; except for where there is landscaping, as current site conditions show. To address possible impacts from chlorinated solvents released from neighboring dry cleaner facility, soil from boring GP1 was sampled at 13-14 feet bgs and analyzed for petroleum hydrocarbons and groundwater was collected at approximately 21 feet and analyzed for hydrocarbons and VOCs. Petroleum hydrocarbons were not detected in the samples. The VOCs in groundwater showed TCE at 58.5 ppb, TCE at 51.4 ppb, cis-1,2-DEC at 4.38 ppb, and 1,1-dichloroethene at 0.550 ppb. Based on information that chlorinated solvents were never used at the Site, the assumed groundwater flow direction, and recent site assessment by DEQ of the drycleaners, DEQ concurred with the consultant that chlorinated solvent contamination was coming from an off-site source.

FINDS:
Registry ID: 110004792911

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Name: Not reported
Address: 1001 PROVIDENCE DR.
City,State,Zip: NEWBERG, OR 97132
Facility ID: 2019-2800
Incident Status: Closed
Material: Sewage
Quantity: unknown
Unit of Measure: Gallons
Release Date: 10/25/2019
Description: City of Newberg reported an unknown amount of Sanitary Sewage was released to a private storm drain, that leads to Springbrook Creek.The location across the street from the address is under construction and the building fixtures are operational. It was believed that the lines were connected to the sewer system, but it turns out that manhole was not cut yet.The amount filled the depth of the manhole with gray/black sewage water. The material was pumped out into a private storm water facility that is on site for the development. The online filtrates into ground water, then an underground detention system outflows to Springbrook Creek, which is less than 200 feet away. A contractor says it was just water, however, a person on site says it was untreated sewage. Caller has been in contact with Renee at DEQ Pho/503.378.5081. In DEQ processed sewage inbox and claimed by Ranei Nomura.

Name: Not reported
Address: 1001 PROVIDENCE DR.
City,State,Zip: NEWBERG, OR 97132
Facility ID: 2019-2800
Incident Status: Closed
Material: Sewage
Quantity: unknown
Unit of Measure: Gallons
Release Date: 10/25/2019
Description: City of Newberg reported an unknown amount of Sanitary Sewage was released to a private storm drain, that leads to Springbrook Creek.The location across the street from the address is under construction and the building fixtures are operational. It was believed that the lines were connected to the sewer system, but it turns out that manhole was not cut yet.The amount filled the depth of the manhole with gray/black sewage water. The material was pumped out into a private storm water facility that is on site for the development. The online filtrates into ground water, then an underground detention system outflows to Springbrook Creek, which is less than 200 feet away. A contractor says it was just water, however, a person on site says it was untreated sewage. Caller has been in contact with Renee at DEQ Pho/503.378.5081. In DEQ processed sewage inbox and claimed by Ranei Nomura.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Remark:	E20, M20, and C20 disp. on a CO alarm at PPM Technologies. E20 had CO levels that were up to 42 ppm in the warehouse area on east side of the plant. The office area showed 10 ppm reading, the upstairs above the office showed readings in the 20ppm range, and the west side warehouse showed zero. E20 and M20 opened large overhead doors and man doors to get fresh air into the building. The plant manager called his heating company which was going to show up around 430pm today and check out the furnaces. NW natural gas showed up on scene

ALLEN MACHINERY FACILITY (Continued) **U003982733**

	and was looking for the source of the CO. NW natural said they would stay on scene until the CO reading were down to zero.

EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	ARGON 75%/CARBON DIOXIDE 25

ALLEN MACHINERY FACILITY (Continued) **U003982733**

Physical Description:	GAS
Case Number:	7440371
Facility Id:	109893
Physical State Of The Substance:	3
Average Amount Possessed During The Year Code:	11
Maximum Amount Possessed During The Year Code:	11
Applicable Unit Of Measure Code:	3
Description Of The Unit Of Measure:	CUBIC FEET
Type Code:	L
Description:	CYLINDER
Type Code:	L
Temperature Description:	CYLINDER
Pressure of Code:	2
Pressure Description:	GREATER THAN NORMAL PRESSURE
Pressure of Code:	2
Pressure Description:	GREATER THAN NORMAL PRESSURE
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	ARGON
United Nations/north America 4 Digit Class Number:	1006
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Chronic Health Hazard
Third Hazardous Class Code For Chemical:	Non-flammable Gas
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	6.4
Hazard Class 3 Of The Chemical:	2.2

Additional Chemical:

Remark:	T21 responded on an odor investigation. Reports were of propane leaking in the area of the pacific pride gas station. T21 arrived in the area and did smell gas. An employee of Parr Lumber across the street from the gas station was opening the gate after hours. T21 followed the employee into the parking lot and noted gas venting from a 1000 gallon propane tank. The employee was at the tank and able to shut down the valve. It was reported that a hose that employees fill propane forklift had ruptured. The employee was having his manager contact the gas company and no hazards were reported as it was an outside area and wind was taking gas away from any nearby residents. T21 cleared the scene and returned to quarters.

Chemical:

Chemical Name:	GASOLINE
Physical Description:	LIQUID
Case Number:	8006619
Facility Id:	017415
Physical State Of The Substance:	2
Average Amount Possessed During The Year Code:	20
Maximum Amount Possessed During The Year Code:	21
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	A
Description:	ABOVEGROUND TANK
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	5,000-9,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	PETROLEUM DISTILLATES
United Nations/north America 4 Digit Class Number:	1203
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Flammable and Combustible Liquid
Second Hazardous Class Code For Chemical:	Acute Health Hazard
Third Hazardous Class Code For Chemical:	Chronic Health Hazard
Hazard Class 1 Of The Chemical:	3.0
Hazard Class 2 Of The Chemical:	6.3
Hazard Class 3 Of The Chemical:	6.4

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Remark:	Dispatched to smell of natural gas per care staff. Staff states that they occasionally got the scent of possible natural gas in building and manager went down to basement and could smel it stronger. E20 arrived and used gas monitor in care facility and in basement and found no gas reading. E20 did get the odor of mercaptan. E20 shut off gas to building which only fed the hot water heater and notified Norhtwest Natural Gas company. E20 went through facility one last time with gas monitor and still had no gas reading. E20 cleared.

NARR Comments: Furniture stripping and refinishing operation. DEQ site visit on 8/2/95 documented the ongoing release of wastewater and furniture-stripping chemicals to a small, ponded area, where they infiltrated into the ground. NON issued for site in 1995. Soil analyses from stockpile sample indicated trimethylbenzene present. Wastewater contained acetone, methylene chloride, 2-butanone, toluene, and trimethylbenzene. No soil samples collected from near the pond.

NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (2/1/92 LSK/SAS) The Northwest Institute of Alcoholism and Chemical Dependency retained CH2M-Hill to perform an assessment prior to the Institute's possible purchase of the site. Copper, lead, methylene chloride, and acetone were detected above background concentrations in sediments on the banks of an intermittent stream on the property.

NEWBERG LOT - HESS CREEK (Continued) **1006854808**

One possible source of the contamination is the Technical Images site northeast and upstream of the property (see ECSI #314).

Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	D039
Waste Description:	Tetrachloroethylene
Waste Code:	D040
Waste Description:	Trichlorethylene
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

A DEC INC (Continued) **1000200639**

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F019
Waste Description: Wastewater Treatment Sludges From The Chemical Conversion Coating Of Aluminum, Except From Zirconium Phosphating In Aluminum Can Washing When Such Phosphating Is An Exclusive Conversion Coating Process.

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U204
Waste Description: Selenious Acid (Or) Selenium Dioxide

Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: (3/12/92 LSK) 1985 RCRA inspection indicated that TCE sludge from a degreasing tank had been routinely disposed of to a dumpster; wastes were also sent out without manifests; follow-up to this visit concluded the company was in compliance. There is an oil/water separator on the site. (7/20/92 LSK) Analysis of soil and pit-water samples collected from the area of UST removals revealed the presence of chlorinated and aromatic volatile organic compounds (VOCs). A monitoring-well network installed in 1992 confirmed the presence of chlorinated and aromatic VOCs in groundwater. Sludges from the two oil/water separators were sampled in February 1992. Analysis identified high TPH and methylene chloride in the sludge. Both separators discharged to Hess Creek prior to connection with the sanitary sewer. Although petroleum hydrocarbons were detected downstream of the storm-sewer discharge, other facilities have discharged to this storm sewer outfall, so a direct correlation is uncertain. A phase I remedial Investigation, initiated in August 1994, showed elevated levels of chorinated solvents in soil and groundwater in the immediate vicinity of the hazardous-substance storage area and UST cavities. However, the presence of DNAPLs has not been confirmed.

Decode for NarcdID: Remedial Action
NARR Comments: Preliminary assessment, as part of the Hess Creek (ECSI #626) investigation, performed in June 1992. Remedial investigation in progress. Phase I RI completed in September 1994; Phase II RI completed in January 1995. Two additional monitoring wells and an extraction well installed in June 1995. Pump test completed. Phase III RI completed in July 1995. Endangerment assessment in progress. (2/21/97 GEA) Draft Comprehensive RI Report received in March 1996. Project Management changed from Tim Carey to Greg Aitken in October 1996. (7/1/98 GEA) Workplan Addendum No. 3 for Remedial Investigation received in June 1998. (1/6/00 GEA) DEQ staff recently recommended that no further investigation is needed for environmental impacts from past releases of halogenated volatile organic compounds at the Adec, Inc. site in Newberg. Under current and reasonably likely future land & water uses at the site, DEQ staff have concluded that there are no unacceptable health or ecological risks associated with site contamination. Past releases of aromatic VOCs and petroleum hydrocarbon constituents from former underground tanks at the site are being addressed separately by DEQ's UST program (LUST log #36-90-4131). (9/20/05 GMW/SAS) DEQ's Underground Storage Tank Program issued a no-further-action decision for remaining petroleum issues at the A-Dec site in March 2000.

A DEC INC (Continued) **1000200639**

Unit of Measure: Gallons
Release Date: 04/18/2019
Description: Caller is reporting that 20 gallons of machine coolant was leaked in the parking lot. Less than one gallon made it to Hess Creek. No assistance is needed with clean up, it has been completed. RP: A-dec E-mail: domestic@a-dec.com Phone: 1.800.547.1883 Environmental consultant: Brent (reporting party) email: brent@creeksideenvironmental.com Cleanup contractor: ACT. Cleanup contractor was at the facility when a scrap metal recycling hauler punctured a recycling bin that contained machine coolant. Coolant entered a storm drain that daylights in Hess Creek. Contractors pumped out the catch basin, jetted out the stormwater line, pressure washed the parking lot, and collected spilled coolant and wash water in vacuum truck. Brent will send MSDS for coolant. Coolant was 8% concentration, mixed with water. The creek appeared milky immediately after less than a gallon of coolant reached the creek. Milky plume dissipated quickly.

Incident Status: Archive
Material: Motor, bearing, propeller and other lubrication oils
Quantity: 55
Unit of Measure: Gallons
Release Date: 08/24/2004
Description: Adec spilled a 50-gallon drum of machine oil which impacted a storm drain and entered an unknown creek which enters Hess Creek. Chuck Carey called Susan Shewczyk who identified herself as the Duty officer. She never called back so Chuck called again this morning. Susan told him this morning to call OERS. The company performed their own initial containment/cleanup and then called in Thermo Fluids who completed the cleanup.

NARR Comments: (3/12/92 LSK/SAS) The City of Newberg suspected in the past that an oil sheen in Hess Creek may have been from the oil/water separator on the Quality Plastics property. Chemical analysis of sludge samples from the oil/water separators identified elevated concentrations of TPHs and volatile organic compounds, including methylene chloride. Prior to 1992, the oil/water separators discharged directly to Hess Creek. TPHs and methylene chloride have been detected in soil & water samples collected downstream of the storm-sewer outfall. However, other facilities have discharged to this storm-sewer outfall, so a direct correlation is not certain. (6/2/92 LSK/SAS) Observations

QUALITY PLASTICS (Continued) **1000287450**

during a June 1992 site visit for a Preliminary Assessment are that the site was clean, process areas appeared to be well run, and the oil/water separators had been connected to the sanitary sewer.

NARR Comments: (6/2/92 LSK/SAS) This site was recommended for a Preliminary Assessment (PA) in March 1992 as part of the Hess Creek (ECSI #626) investigation. Quality Plastics submitted a Site Response Activities Report to DEQ. DEQ's contractor, Tetra Tech, completed the PA. Based on the PA, Site Assessment believes no further action is necessary at this site.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Oregon Department of Environmental Quality (DEQ) is a regulatory agency tasked with protecting the quality of Oregon's environment. DEQ uses a combination of technical assistance, inspections, and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NARR Comments: (11/30/94 ACV/SAS) Complaint filed in March 1994 led to discovery of an old dump encroaching on an unnamed tributary of Chehalem Creek in Newberg. The dump was located at Chehalem Park and Recreation District (CPR) Ewing Young Park. CPR recently acquired property from Smurfit Newsprint. Along the streambank there were large exposures of glass shards, metal containers, appliances, etc. Ash was also present, which suggests evidence of past burning.

NARR Comments: [November 1994] An old dump was found encroaching on an unnamed tributary of Chehalem Creek. The dump was located in the current Ewing Young Park. Along the streambank there were large exposures of glass shards, metal containers, appliances, etc. Ash was also present, which suggests evidence of past burning. Further investigation is required to determine the extent and environmental impact of this past land-use practice.

NARR Comments: (1/26/90 MJZ/SAS) Ushio America Inc was proposing to operate a light bulb manufacturing plant at the A-Dec facility. There are some hazardous wastes associated with light bulb manufacturing. Ushio collected samples to establish background data and discovered 1,1,1-trichloroethane (TCA). A-Dec is a small quantity generator of TCA.

NARR Comments: (11/23/1999 GEA/VCP) Technical Images operated as an instrument panel, circuit board, and metal fabricator from 1973 to 1992. The facility used approximately 109 chemicals in its daily operations. The company submitted RCRA closure plans for its drum storage area in November 1984 and July 1987 after a series of NOVs (Notices of Violation) were issued for RCRA violations. The closure plans were never formally approved by DEQ. The company conducted two soil removals in 1985 and 1986 in the drum storage area behind the building. Post-removal soil sampling found low concentrations of chromium, copper, and lead. A new RCRA closure plan was to be submitted in February 1989. Technical Images' owner claimed sometime during 1990-1991 that the company was out of money. The facility was abandoned in 1992. DEQ visited the site in April 1992 as part of a Preliminary Assessment (PA), and found very sloppy conditions throughout the facility with evidence of spillage from tanks, corroded barrels, and extensive structural damage. The site was referred to the Site Response Section from RCRA in May 1994. DEQ completed a removal assessment investigation in August 1994, which recommended conducting a removal action at the site on a high priority basis. At the time of the removal assessment, approximately 16,000 gallons of chemical wastes, 6,000 gallons of wastewater, and 19-21 tons of sludges were present in drums, vats, open top tanks,

TECHNICAL IMAGES (Continued) **S105042321**

and on the floors of the building. The chemical wastes included nickel, chrome, and tin-lead plating solutions; solvents, copper acid solutions, other acids, waste oil, ferric chloride, and F006 sludges.

NARR Comments: The site is located in a light industrial area with agricultural land to the north. Shallow groundwater is approximately 10-13 feet below the surface; deeper groundwater is 45-150 feet below the surface. In 1996 there were 148 wells within one mile of the site. Most nearby residents received drinking water from the City of Newberg. Newberg gets its water from wells in Marion County and springs in the Chehalem Mountains. Residential areas are located west and southeast of the site.

NARR Comments: (11/23/1999 GEA/VCP) DEQ began removing the large amounts of abandoned chemical wastes from inside the building in November 1994. All wastes were characterized, segregated into compatible waste streams, and pumped from vats/drums/tanks into secured Baker Tanks or drums (for liquids) and roll-off boxes (for sludges and contaminated debris). All wastes were transported off site for disposal and recycling. The cleanup was completed in April 1995. DEQ conducted a post-removal investigation in February 1996 to determine if site operations had impacted local groundwater and soils. Five monitoring wells were installed as part of the investigation. Sampling results found low levels of VOCs in groundwater and no significant soil contamination. Yamhill County foreclosed on the property, and in March 1996 the property was sold at public auction to A-dec Inc., which owned a neighboring facility. A-dec conducted a series of investigations to address the remaining residual contamination at the site. DEQ reviewed A-dec's work in May and June 1999 and determined that no further action was necessary at the site. (1/6/00 GEA) DEQ staff recently recommended that no further investigation or remediation is needed for environmental impacts from past hazardous substance discharges at the former Technical Images site in Newberg. A remedial investigation and several removal actions were performed at the site to address the impact of hazardous substance releases occurring between 1973 and 1992. DEQ staff screened the site for human health and ecological risks from exposure to VOC and/or metal-contaminated soils, sediments, and groundwater. Under current and reasonably likely future land and water uses at the site, DEQ staff concluded that there are no significant health or ecological risks associated with site contamination.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Jan. 2000] In the 1990s, a remedial investigation and several removal actions were performed at the site to address the effects of hazardous substance releases occurring between 1973 and 1992. DEQ screened the site for human health and ecological risks from exposure to soils, sediments, and groundwater contaminated with volatile organic compounds and/or metals. Under current and reasonably likely future land and water uses at the site, DEQ staff concluded that site contamination posed no unacceptable risks to human health or the environment.

Updated By: GWISTAR
Updated Date: 06/09/2006
Decode for NarcdID: Contamination
NARR Comments: (9/28/95 ACV/SAS) A 60 million gallon sludge release to Hess Creek occurred in May 1981. Some heavy metals were detected in the sludge in the creek. Several small oil spills, two bunker 'C' fuel oil spills, and a small spill of caustic alkali cleaning chemical have also occurred at this site.

NARR Comments: (9/28/95 SCV/SAS) Smurfit conducted an investigation near the AST containment area in 1993 and 1994. Approximately 1,750 cubic yards of impacted soil were removed and thermally treated off-site. (Note: the containment area did not have any liner other than wood chips over native soil). A kerosene release from an AST near the paper machine building was reported in late 1994. Monitoring wells have been installed but groundwater quality data is not yet available. A recovery well and VES system were also installed in 1995. No details yet provided. A groundwater assessment is needed, in conjunction with a DEQ Water Quality NPDES Preliminary Assessment (due 11/96). Further state action is a medium priority.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/26/2023
Date Data Arrived at EDR: 01/02/2024
Date Made Active in Reports: 01/24/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2023
Date Data Arrived at EDR: 01/02/2024

Next Scheduled EDR Contact: 04/08/2024
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/26/2023
Date Data Arrived at EDR: 01/02/2024

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2023

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 09/19/2023

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER RELEASE: UST Finder Releases Database
US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.
