Process for getting a product reviewed for inclusion on the QPL:

The Oregon Department of Transportation (ODOT) Qualified Products List (QPL) is a program derived from our Standard Specifications. It is used on construction projects for ODOT as well as many local agencies.

The ODOT QPL includes products that fit existing specification categories and meet our requirements.

The QPL submittal process can be broken down into two groups.

1. **Products** – The first group is for products that fit into an **existing specification category**. The categories are listed on the internet at the link below. Most have the requirements for each listed. These products reviews are in pdf format.
   https://www.oregon.gov/odot/Construction/Pages/Product-Review.aspx

   These categories will also be identified in the Standard Specifications and Special Provisions. (See links below.)

   – Specifications web site
     https://www.oregon.gov/odot/Business/Pages/Standard_Specifications.aspx
   – Standard Specifications
     https://www.oregon.gov/odot/Business/Specs/2024_STANDARD_SPECIFICATIONS.pdf
   – Special Provisions
     https://www.oregon.gov/odot/Business/Pages/Special-Provisions.aspx

2. **New Product Categories** – These are categories that do not have specifications and/or that are relatively new to the industry. Not many products fit into this group. We already cover a great number of categories in our QPL. Sometimes we've decided not to include specific categories. However, if you may review this list and determine that your product doesn't fit one of our established categories. Do your best to name or describe the category that fits best.

   Product reviews in this area generally take longer to create. We may need to do an extensive evaluation, further testing, and possibly new specification development. We may also determine not to create a specification for it at all.

Submittal Process

1. **Existing Categories** – We have a list of requirements for most categories in documents called Product Review Guidelines. You can find a list of these documents at: https://www.oregon.gov/odot/Construction/Pages/Product-Review.aspx. Each guideline lists the specific requirements for each category. You should still send the submittal form and anything else you think would be important to include.

2. **New Categories** – This will be somewhat different depending on the category, but generally, the following list is a good place to start. If we need more information, we we'll let you know.

   – Submittal Form (Preliminary Information for Product Evaluation)
   – Product Brochures (PDF, no internet links please)

- Independent test results to pertinent requirements. (ASTM, AASHTO, etc.)
- MSDS, if appropriate
- Pictures, drawings, etc.
- Installation instructions
- List of warnings, limitations, etc.

For Traffic Signal material submittals, see the website at the link below. These are not part of the QPL program and are managed by our Traffic Signals group.
