The Crash Analysis and Reporting Unit collects data and publishes statistics for reported motor vehicle traffic crashes per ORS 802.050(2) and 802.220(6). The data supports various local, county, and state traffic safety programs; engineering and planning projects; legislative concepts; and law enforcement services.

Legally reportable motor vehicle traffic crashes are those involving death, bodily injury, or damage to personal property in excess of \$500 (for crashes that occurred prior to 9/01/1997) or \$1,000 (for crashes that occurred from 9/01/1997 through 12/31/2003). As of January 1, 2004, drivers are required to file an Accident and Insurance Report Form with DMV within 72 hours when: injury or death resulted from the accident; damage to the driver's vehicle is over \$1,500; damage to any vehicle is over \$1,500 *and* any vehicle is towed from the scene as a result of said damage; or damage to any one person's property, other than a vehicle involved in the accident, is over \$1,500. As of 01/01/2018, the damage threshold was raised to \$2,500. For more information on filing requirements, please contact DMV at

Disclaimer: The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit cannot guarantee that all qualifying crashes are represented; nor can assurances be made that all details pertaining to a single crash are accurate.

INTRODUCTION

The State Highway Crash Rate Tables are published annually, to assist readers in computing crash rates for specific sections of Oregon mainline state highways. This publication is presented in four parts:

- I. Results of Analysis
- II. State Highway Crash Rates
- III. Statewide Fatal Traffic Crash Tables
- IV. Appendix

Part I, Results of Analysis, compares Oregon and national fatality rates per traveled miles and population. Table II summarizes state highway crash rates by functional classification for the past five years. Table III compares rates for freeways and non-freeways, for the past two years. Table IV lists crash and fatality counts and rates by functional classification for the most recent year. Table V lists fatal and serious injury data by functional classification. This section also contains cross-references tables of Route Numbers to ODOT State Highway Index Numbers.

Part II, State Highway Crash Rates, reports five years of crash rates for individual highways. Highways are divided into urban and rural sections based on federal aid urban boundaries and city limits. Sub-sections are defined by a starting milepoint and the segment length in hundredths of a mile. Crash counts and annual average daily traffic is provided for the most recent year, and rates for the previous four years are included for each segment.

Part III, Statewide Fatal Traffic Crash Tables, reports fatal crashes and fatalities for the latest year by roadway system, jurisdiction, crash type, and traffic conditions.

Part IV, Appendix, contains a glossary of terms used in this publication.

The Oregon Department of Transportation began summarizing traffic crash data in 1941 and began publishing the results in 1948. The coding of traffic crash data is guided by the Crash Analysis and Reporting Unit's "Motor Vehicle Traffic Crash Analysis and Code Manual", and the American National Standards Institute *Manual on Classification of Motor Vehicle Traffic Accidents* (ANSI D16.1 – 2025), published by Association of Transportation Safety Information Professionals (ATSIP).

PART I

RESULTS OF ANALYSIS

FACTS OF INTEREST

The mainline State Highway System accounted for 21,961,481,506 mainline vehicle miles traveled (VMT) during 2023, which is up 0.24% from the 2022 state highway VMT of 21,908,050,274. These are unofficial VMT figures based on the mainline highway segments published in this book. For official state highway VMT, please refer to the annual Transportation Volume Tables publication.

There were 280 fatal crashes on the state highway system during 2023 (including crashes on highway ramps, connections, and frontage roads). This is down 7.28% from the 302 fatal crashes reported for 2022. Fatal crashes resulted in 327 fatalities on the state highway system during 2023. This is down 4.39% from the 342 fatalities reported for 2022.

There were 1.33 crashes per million vehicle miles traveled on mainline highways classified as “Non-Freeway” during 2023. This is 3.17 times higher than the “Interstate Freeway” crash rate of 0.42, and 1.72 times higher than the crash rate of 0.77 for “Other Freeways and Expressways”. The difference between non-freeway and freeway crash rates indicates that freeway travel is safer.

The USDOT reports that 40,901 people were killed in traffic crashes nationwide during 2023. This is down 4.26% from the final 2022 national death toll of 42,721. There were 587 people killed in Oregon traffic crashes statewide during 2023. This is down 2.65% from Oregon’s final 2022 death toll of 603.

TABLE I: MOTOR VEHICLE TRAFFIC AND POPULATION FATALITY RATES, 1994 - 2023
OREGON and NATIONAL

Table I compares Oregon and national traffic fatality rates based on vehicle miles traveled and on population. The figures shown are estimates from state traffic authorities, the U.S. Census Bureau, and the Federal Highway Administration. Fatality rates are calculated using adjusted vehicle miles traveled (VMT) to account for mileage from county roads and city streets. They are not comparable to the rates shown on Table IV, which reports data for the state highway system only and excludes county roads, city streets, connections and frontage roads.

TABLE II: Five-Year Comparison of State Highway Crash Rates

Table II lists crash rates for mainline state highways for the past five years, by federally defined urban and rural areas and functional classification. Data for highway connections and frontage roads are excluded. "Mile" figures are for the most recent year only. Refer to the 2023 Oregon Mileage Report for official figures on highway miles.

TABLE III: Comparison of Crash Rate Components, 2022 vs. 2023

Table III compares crash rate information for mainline state highways for the last two years, by functional classification, for urban and rural areas. It shows the percent change from the previous year. Data for highway connections and frontage roads are excluded. Refer to the 2023 Oregon Mileage Report for official figures on highway miles.

TABLE IV: 2023 Crash Rates by Jurisdiction and Functional Classification

Table IV lists mainline State Highway System crash rates by federally defined urban and rural areas and functional classification. "Miles" are calculated from a snapshot of the highway inventory that was taken June 2023. Data for connections and frontage roads are excluded. Refer to the 2023 Oregon Mileage Report for official highway mileage. Contact the Transportation Systems Monitoring Unit for official Annual Vehicle Miles Traveled (VMT).

PART II

STATE HIGHWAY CRASH RATES

COMMENTS

CRASH RATE FORMULA

The State Highway Rate Section reports crash rates for mainline state highways. The crash rate is the number of crashes per million vehicle miles traveled (VMT). VMT is calculated by multiplying the highway segment length, annual average daily traffic for the segment, and the number of days the segment was open for travel. Crash rates are calculated using either of the following formulas, where:

- **CRASHES:** the number of crashes that occurred on the given highway segment
- **SEGMENT LENGTH:** the distance between the segment's beginning and ending milepoint, to the nearest one-hundredth of a mile
- **AADT:** the annual average daily traffic for the highway segment
- **DAYS OPEN:** the number of days the highway segment was open for travel, i.e., 365

$$\frac{\text{Crashes} * 1,000,000}{\text{Segment Length} * \text{AADT} * \text{Days Open}} \quad \text{or} \quad \frac{\text{Crashes} * 1,000,000}{\text{VMT}}$$

When comparing crash rates, choose highways with the same functional classification, road jurisdiction (see next page), and similar traffic volume. To find a segment's functional classification, see *Functional Classification and NHS on Oregon State Highways*, available on this web page <https://www.oregon.gov/ODOT/Data/Pages/Functional-Class.aspx> and refer to Rate Table II (page 7 of this publication) for statewide average rates on similar highways.

SEGMENTS CONTAINING COUPLETS

Some highway segments contain couplets. A couplet is defined as the two roadways of a divided highway, usually named differently, bearing the same highway number, running approximately parallel to each other, providing for traffic flow in opposite directions, and separated by accessible land. The roadway that bears traffic in the direction of increasing milepoints is the “**add**” **mileage** side of the highway. The roadway that bears traffic in the opposite direction is the “**non-add**” **mileage** side of the highway.

In this publication, couplets are identified by a directional abbreviation at the end of the segment description, indicating the direction of vehicle travel on the couplet: NBD for northbound, EBD for eastbound, SBD for southbound, and WBD for westbound.

The “non-add” mileage side of the couplet is indicated by the letters “**CP**” to the left of the segment length (“Miles”).

When calculating AADT for multiple highway segments (i.e. for section totals), include

the couplet's non-add mileage in the weighted average AADT; but **exclude** the non-add mileage when calculating the section's total miles. Total "miles" represent "add mileage" only. Total "crashes" represent crashes from both sides of the couplet.

SEGMENT CRASH COUNTS

Crashes are attributed to highway segments based on the beginning ("start") milepoint of the segment. Crashes that occur at a segment's end milepoint are attributed to the following segment, which begins with the same milepoint. The exceptions to this rule are: ending segments of the non-add side of a couplet; Z mileage end segments; segments that end state jurisdiction of a highway; and the final end segment of each highway.

A blank in the "Crash" column means no crashes were recorded for that segment during the given year.

Crashes for which the highway milepoint can't be determined are counted in the summary at the end of each highway. See the rows for urban and rural "unknown" milepoint.

EQUATIONS AND OVERLAPPING ('Z') MILEAGE

Milepoint equations are used to indicate the loss of mileage in areas where a highway was shortened due to realignment, somewhere between the highway's beginning and ending milepoint. Section lengths that display a lower number in the "Miles" column than is calculated by subtracting the start milepoint from the end milepoint, indicate the existence of at least one milepoint equation in that milepoint range. For example, Highway 33 loses 0.50 of a mile to milepoint equations between MP 23.18 and 34.35.

Overlapping mileage, also known as 'Z' mileage, is created when a highway is lengthened due to realignment, somewhere between the beginning or ending milepoint of the highway. Segment lengths that display a higher total in the "Miles" column than is calculated by subtracting the "Start MP" of one row from another, indicate the existence of 'Z' mileage in that milepoint range. For example, Highway 33 gains .11 of overlapping (Z) mileage between MP 39.39 and 44.57.

JURISDICTION

Section breaks occur at Federal Aid Urban Transportation Boundaries (FAUB), and when entering or exiting city limits. This results in the following four jurisdictions for the purpose of this publication:

- **URBAN CITY:** the segment occurs at or inside urban transportation boundary, and at or inside city limits.
- **URBAN FRINGE** (*formerly "Suburban Area"*): the segment occurs at or inside urban transportation boundary, but outside city limits.
- **RURAL CITY:** the segment occurs outside urban transportation boundary, but inside city limits.
- **RURAL AREA:** the segment occurs outside urban transportation boundary and outside city limits.

Data for jurisdiction section types are summarized on the last page for each highway. Crashes that occurred at indeterminate ("unknown") milepoints within an urban or rural area are also summarized.

PART IV

APPENDIX

GLOSSARY

A

AADT

Annual average daily traffic is the total volume of vehicle traffic for a given highway segment and year.

Add Mileage

The term "add-mileage" generally applies to the roadway that carries milepoints that have increasing values in the direction of travel. The term originated from the fact that the direction of increasing milepoints is used for mileage summarization, whereas separate roadways mileposted in the opposite direction are not counted in totals. The Pacific Highway 1, Interstate 5, is the only exception in that the add-mileage is accumulated in the direction of decreasing milepoints.

Alignment

The horizontal and vertical control of a section of roadway or other transportation facility (e.g. multi-use paths, railway, etc.).

At Grade

Used to represent that a feature and a roadway meet at the same elevation.

B

Beginning Milepoint

The milepoint notation, to the nearest 0.01 mile, that describes the location of the beginning of a linear feature or attribute

C

Common Alignment

Any length of roadway upon which more than one state highway is designated.

Connection

A street or road, open to vehicular travel, which joins a road from the State of Oregon Highway System to any other road, entity, or another state owned road. A connection is usually much shorter than a spur or frontage road.

Couplet

The two roadways of a divided highway, named differently, approximately parallel with traffic flow in opposite directions and separated by accessible land uses. In I.T.I.S. all couplets are divided highways.

GLOSSARY

CP

Non-add mileage side of couplet.

Crash

Any motor vehicle collision or non-collision event which results in a fatality, bodily injury, or damage to a person's property. Crashes that are considered "reportable" for the purposes of ODOT's Statewide Crash Data System must meet the criteria described on the initial page of this publication.

E

EBD

Eastbound direction of travel

ECL

East city limits

Ending Milepoint

The milepoint notation, to the nearest 0.01 mile, that describes the location of the end of a linear feature or attribute

F

FHWA

Federal Highway Administration

Freeway

State highway which meets federal freeway standards

Frontage Road

A road secondary to and generally parallel to a highway, providing service to abutting property and adjacent areas and for control of access. A frontage road may or may not be directly connected to the highway it services.

Functional Classification

The federal system by which roads are grouped into functional systems according to the type of service and amount of traffic the facility carries. This system determines the level of federal funding available for maintenance and improvements. Federal functional classification is determined using federal guidelines and is approved by FHWA.

GLOSSARY

H

Highway

Every public way, road, street, thoroughfare and place, including bridges, viaducts and other structures within the boundaries of this state, open for use of the general public for vehicles or vehicular traffic as a matter of right. Some highways are designated by the Oregon Transportation Commission as State Highways. Refer to the definition of "State Highway" for more information.

Highway Number

See State Highway Index Number.

Hwy

State Highway

I

INT

Interchange

Interchange

A system of interconnecting roadways and structures in conjunction with one or more grade separations that provides for the movement of traffic between two or more roadways on different levels.

Intersection

The area where two or more roadways join or cross at the same elevation.

Interstate Route

A route system that consists of all presently designated freeway routes meeting the Interstate geometric and construction standards for future traffic, except for portions in Alaska and Puerto Rico. The interstate System is the highest classification of arterial roads and streets, and provides the highest level of mobility, at the highest speed, for a long uninterrupted distance. This system is intended for through traffic, has full access control, and has grade separations at major intersections. Interstate Routes are signed routes. All Interstate Routes are state highways.

J

JCT

Junction

Junction

The intersection of two or more state highway roadways.

GLOSSARY

L

Lane

A portion of roadway, usually indicated by pavement markings, designated for travel by one line of vehicles.

Located Line

A surveyed alignment where a road is planned to be built. The location where highway construction places have been developed, and the geographic location surveyed for construction, but no paved surface yet exists.

M

Mainline

Refers to all roadways for a highway, excluding connections and frontage roads.

Milepoint

A given measurement between highway mileposts.

Milepoint Equation

A statement that specifies two different milepoints that exist at a single point on the same roadway. This is a method of accounting for changes in a linear measurement system without re-milepointing the entire roadway. The changes in milepoints are usually caused by new construction.

Municipal

Of or pertaining to the area within the limits of an incorporated city.

N

NBD

Northbound direction of travel

NCL

North city limits

Non-Add Mileage

Roadways with one direction of travel and milepoints that decrease in the direction of travel. The Pacific Highway 1, Interstate 5, is the only exception in that the non-add mileage is accumulated in the direction of increasing milepoints.

GLOSSARY

Non-Freeway

State highway or segment of highway which does not meet federal freeway standards.

Non-System

Roadway that is not administered by ODOT and not part of the State Highway System.

O

O-Pass

Overpass

OR / ORE

A route system established by the Oregon Transportation Commission (OTC) in 1932 to facilitate travel on main highways over the shortest distance and the best roads throughout the state. This route system is currently regulated by the OTC. OR Routes are signed routes. Not all OR Routes are state highways. Not all state highways have an OR Route number.

Overlapping Mileage

Duplicate milepoints assigned to a section of highway that has been lengthened. Referred to as “Z” Mileage.

O-Xing

Over-crossing

P

Primary

Refers to a state highway having a highway number lower than 100.

R

Roadbed

Completed excavations and embankments for the subgrade, including ditches, side slopes, and slope rounding, if any.

Roadway

The American National Standard Definition’s (ANSI) D16.1- 2025 Manual on Classification of Motor Vehicle Traffic Accidents, definition number 2.2.28, describes “roadway” as “that part of a trafficway designed, improved and ordinarily used for motor vehicle travel or, where various classes of motor vehicles are segregated, that part of a trafficway used by a particular class. Separate roadways may be provided for northbound and southbound traffic or for trucks and automobiles.”

GLOSSARY

Route

A designated path through a road network

Rural Area

Generally, the geographic area that exists outside an urban transportation boundary. For the purposes of this publication, "Rural Area" is a sub-category representing the area which exists outside an urban transportation boundary *and* outside the limits of an incorporated city.

Rural City

An incorporated city that exists outside a Federal Urban Transportation Boundary. Generally, rural cities have populations of fewer than 5,000 people.

R/W

Right of way

S

SBD

Southbound direction of travel

SCL

South city limits

Secondary

Refers to a state highway having a highway number higher than 99.

Segment

A length of highway between a given set of milepoints.

Signed Route

Any designated route which is signed (e.g. US, OR / ORE, Interstate, scenic byway, historic route, etc.

Spur

Any State Highway designated as such by the Oregon Transportation Commission; prevalently a branch or extension of an existing State Highway.

State Highway

A land-based public way designated by the Oregon Transportation Commission as a highway for the purpose of vehicular travel. The State of Oregon commonly has, but may not have all, right, title, interest, jurisdiction, maintenance and control of the entire area within the highway right-of-way.

GLOSSARY

State Highway Index Number

An Oregon Transportation Commission approved identifier assigned to a highway. The valid range of identifiers is from 1 to 499. This number is used internally within ODOT, and should not be confused with the Route Number posted along the highway. Reference Tables 1 and 2 of this publication cross-reference the highway index number with their posted route numbers.

Suburban Area (see “Urban Fringe”)

System

A shortened term indicating that the subject roadway is a State Highway, under ODOT jurisdiction

T

Temporary Mileage

Milepoints assigned to a temporary traveled route.

Temporary Traveled Route

Roads that are meant to temporarily function as state highways until a replacement state highway alignment is built or dedicated. These roads do not belong to ODOT, but ODOT has legally agreed to maintain them. TTR's can occur because of a detour or highway construction.

U

Urban Area

For the purposes of this publication, “Urban Area” is the geographic area that exists within a Federal Urban Transportation Boundary. It is comprised of Suburban Areas and Urban Cities.

Urban Fringe

The term “Urban Fringe” replaced the term “Suburban Area” in the 2018 State Highway Crash Rate Tables to describe areas that exist outside urban city limits, but that remain inside a Federal-Aid Urban Transportation Boundary.

Urban City

An incorporated city that exists inside a Federal Urban Transportation Boundary. Generally, urban cities have populations greater than 5,000 people.

US Route

A route system that was established by Congress in 1926 to facilitate travel on main highways over the shortest distance and best roads nationwide. This route system is currently regulated by an AASHTO committee. US Routes are signed routes. Not all US Routes are state highways.

GLOSSARY

U-Xing

Under-crossing

W

WBD

Westbound direction of travel

WCL

West city limits

Z

Z Mileage

Duplicate milepoints assigned to a section highway segment that has been lengthened.
