Federal Aid Urban Boundaries And Functional Classification

Frequently Asked Questions

Updated December 2013 with input from FHWA Headquarters and FHWA Oregon Division

1. Question:
What determines urban/rural for federally funded projects? MPO planning boundary, Urban Growth Boundary (UGB) or Federal-Aid Urban Boundary (FAUB)?

Answer:
The Federal-Aid Urban Boundary. Roadways inside the FAUB have urban classifications while those outside the FAUB have rural classifications.

2. Question:
It is our understanding that the Federal Functional Classification is used to determine design standards on federally-funded projects even if the local community calls the road something else in their Transportation System Plan (TSP). Is this correct?

Answer:
Yes, however the expectation is that consistency will be maintained between the functions of roadways shown in local TSPs and the approved federal functional classifications. If the desired function changes in the TSP, ODOT and FHWA should be asked to approve corresponding changes to the federal functional classification as part of the TSP update. Keeping the two consistent will help reduce conflicts in the selection of design standards for federal-aid projects.

3. Question:
If a federally funded project is inside the Metropolitan Planning Organization boundary but outside Urban Growth Boundary and/or the Federal-Aid Urban Boundary, do urban design standards apply to the project or can rural design standards be used?

Answer:
Urban design standards would typically apply inside the FAUB. Conversely, rural standards would typically apply outside. However, FHWA, ODOT and/or local agency staff, as appropriate would decide the design standards used on a case-by-case basis.
4. Question:
Are design standards required for all Federal-aid projects?

Answer:
Yes
AASHTO design standards (or greater) are required to be used on all Federal-aid projects.

5. Question:
Are design standards rigid?

Answer:
No. Case-by-case design exceptions are allowed on all projects if properly justified and documented.

6. Question:
How is the FAUB boundary determined?

Answer:
Census data determines when an area’s population is sufficient to qualify as “urban”. The census defined boundaries can be “smoothed” to incorporate local conditions such as the UGB, terrain, and special traffic generators. Boundary locations should be selected to include logical transportation control points such as interchanges and major cross roads. Also, boundaries should include airports and seaports if they lie within a reasonable distance of the Census boundary. FAUBs must include the entire area defined by the census. Please see additional information about making adjustments to the FAUB and implications for funding on FHWA’s Census Issues FAQ: https://www.fhwa.dot.gov/planning/census_issues/urbanized_areas_and_mpo_tma/faq/

7. Question:
Can two adjacent rural areas merge their boundaries and become a small urban area if their combined population is 5,000 or greater?

Answer:
No. Only Census data determines when an area’s population is sufficient to qualify as “urban”. The listing of Oregon’s 2010 Census defined urban areas can be found here: https://www.oregon.gov/ODOT/DATA/documents/faub_list.pdf
8. Question:
Does Functional Classification affect federal funding on individual roads?

Answer:
Most FHWA funds can be used on any functionally classified roadway except “local roads” and “rural minor collectors”.
FC defines which roadways are eligible for FHWA’s Emergency Relief Program vs. FEMA assistance.
FHWA’s bridge program covers bridge replacement or rehabilitation on any functionally classified public roadway.
Functional classification played a key role in defining the National Highway System which is made up primarily of “principal arterial” routes.

9. Question:
Does this functional classification system cover only the existing facilities, or does it also apply to planned facilities?

Answer:
While functional classification applies to both existing and planned facilities, the focus is on the existing system and near-term improvements. A planned road may be included in the functional system if it is using federal funding, identified in the Statewide Improvement Program (STIP), and will be under construction within 4 years. There may be situations where adding a new facility might change the function (and the classification) of nearby existing roadways.

10. Question:
FHWA has told us that rural/urban boundaries should be on one side of the road or the other, not down the middle. Does this also mean that the same design standards must be used on both sides?

Answer:
Yes, the same design standards should be used on both sides of a road. We cannot envision a situation where different roadway designs would be used. Appurtenances (e.g., sidewalks, landscaping) might be different.

11. Question:
From a local perspective, what is the incentive to review and update the FAUB and FC?

Answer:
Eligibility for most FHWA roadway and bridge funding is based on the federal FC. Federal FC defines which roadways are eligible for FHWA’s Emergency Relief Program vs. FEMA assistance. Design standards for FHWA funded roadways are based, in part, on the federal FC.
12. Question:
What pitfalls should a local agency watch out for?

Answer:
Keep the focus on how a given roadway is intended to function.
Don’t forget about how roads, and other transportation facilities, fit into the local system
and connect to adjacent communities.
Remember that the higher FC routes make up a small percentage of total roadway
mileage but carry the bulk of VMT.
Remember that federal FC standards are sometimes very different than the FC system a
local agency uses in their TSP. (See question 2.)

13. Question:
The 2000 Federal Aid Urban Boundary is in some cases larger than the 2010 Census
boundary and the UGB. Can an Urban Area opt to match the 2000
boundary without having a specific reason or justification?

Answer:
Yes, however the FAUB should reflect the Census boundary expanded and smoothed to
include features such as entire city limits, the UGB, large traffic generators, etc.
Therefore, it is recommended that the 2000 FAUB be adjusted if conditions have
substantially changed since the last boundary update.

14. Question:
Can FAUB updates be made between Census years? For example, if a UGB is
updated, could an urban area request to make corresponding changes in the FAUB?

Answer:
Yes. However, States are strongly encouraged to make such adjustments as infrequently
as possible and only when deemed absolutely necessary. Because the Census boundary
is updated on a 10-year cycle and the FAUB is adjusted after each Census, it is not
anticipated that more frequent adjustments would be warranted.

15. Question:
Can FC updates be made between Census years?

Answer:
Yes. Federal FC updates should be considered as part of local Transportation System
Plan updates and other planning studies in order to maintain consistency.
