

Pictures for How to Create New CONNECT DGNs – C: drive or network share

Double-click a CONNECT desktop shortcut.

Set the WorkSpace and WorkSet, then click [New File].

[Browse] (red) to select a seed file; navigate (green) to a location to save the DGN.

Enter the new file name, then click [Save] (red).

Pictures for How to Create New CONNECT DGNs – ProjectWise

Open the ProjectWise Explorer to a CONNECT Design Platform project; right-click and choose New>Document...

Select [Advanced Wizard], then [OK].

Click [Next>] in the Advanced Document Creation Wizard until the "Select a Template" page; click [Select...].

Navigate (green circle) to CAD_Resources>Seed at the top of the datasource. Select the appropriate seed file and click [Open] (red).

Click [Next>] until the “Define Document Attributes” page. Select a Document Description from the very bottom of the list (where the ORD names are) to name the document and ensure that it is being created in the correct folder.

Click [Next>], and then [Finish] to create the document in ProjectWise.

In ProjectWise, right-click [Rename...] the new document, to correct the document name and the description. To the name, append a decimal and the lower case file extension (.dgn); to the description, replace <Name>.

Click [OK].
