Welcome!

- Project Management Team
- Purpose of Today's Meeting
- Agenda
- Introductions
- Parking Lot

Oregon Department of Transportation

Rail Crossing Action Plan

Charter

Charter Overview

- Treat each other, staff and guests (if any) with respect
- Listen carefully, seek to understand each other
- Everyone participates
- Focus on the purpose and help stick to the agenda
- Discuss constructively
- Seek to find unity and common ground
- Minimize distractions during the meeting

Oregon Department of Transportation

Rail Crossing Action Plan

Refresher

The Role of the State Action Plan

Currently

ODOT selects appropriate devices (Rail unit)
and provides crash analysis (Transportation Data)

&

Examines licensing, training, education programs and
coordinates enforcement (DMV, Safety Division)

in separate programs

- This plan seeks to bring these together
- Stakeholders play an important role in crossing safety improvements
- Your input is important for this plan

Oregon Department of Transportation

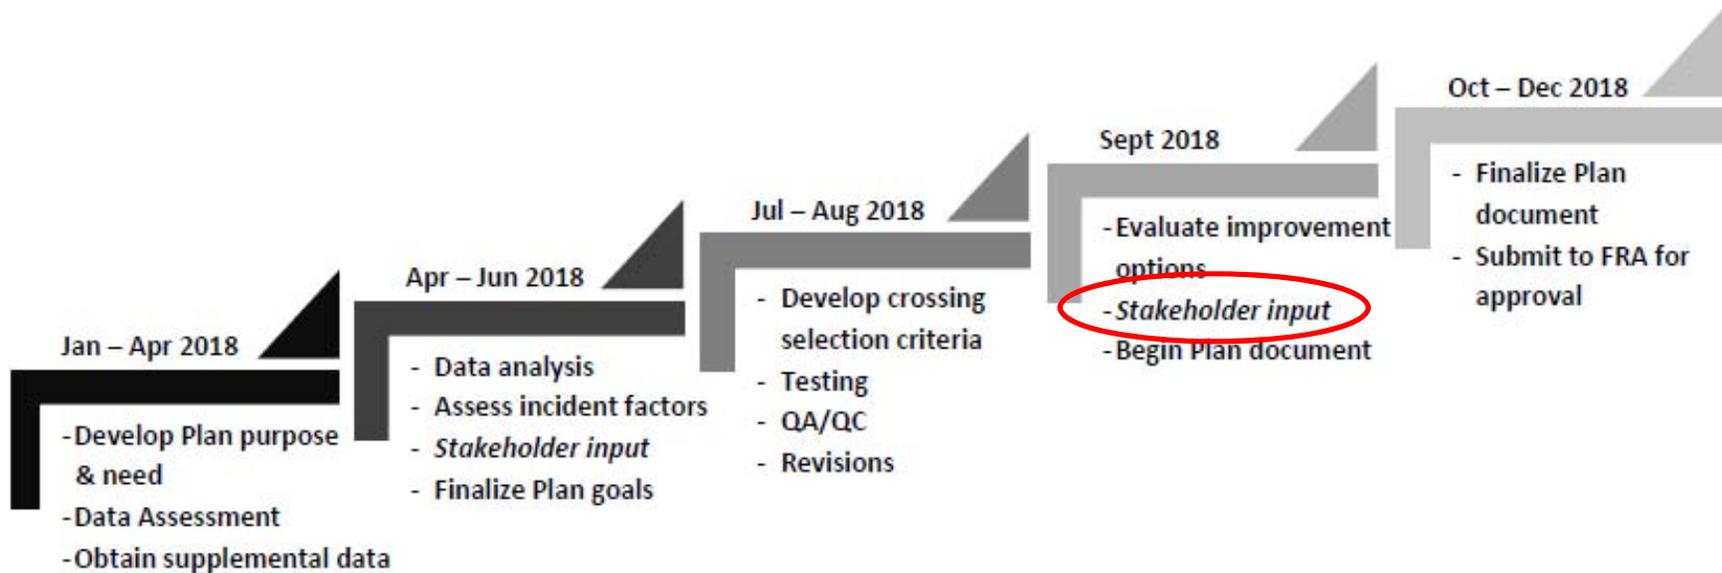

Rail Crossing Action Plan

Schedule & Key Milestones

Project Schedule

Last Meeting Highlights

- Data Discussion
- Contributing Factors
- Plan Objectives

Last Meeting Highlights - Data

- Data Analysis – Incidents 2008-2017
 - Physical
 - Temporal
 - Environment
 - Behavioral

Last Meeting Highlights - Data

- Data Analysis – Incidents 2008-2017
 - Physical
 - Where
 - Railroad
 - Incident Rate
 - Temporal
 - Environment
 - Behavioral

Last Meeting Highlights - Data

- Data Analysis – Incidents 2008-2017
 - Physical
 - Time of day
 - Day of the week
 - Time of year
 - Temporal
 - Environment
 - Behavioral

Last Meeting Highlights - Data

- Data Analysis – Incidents 2008-2017
 - Physical
 - Weather
 - Other factors
 - Temporal
 - Environment
 - Behavioral

Last Meeting Highlights - Data

- Data Analysis – Incidents 2008-2017
 - Physical
 - Driver characteristics
 - Driver behavior
 - Situation
 - Temporal
 - Environment
 - Behavioral

Last Meeting Highlights - Factors

- Contributing Factors
 - Risky behavior (15)
 - Population /Demographics: (4)
 - Distraction (12)
 - Inactive Rail—Expectations (6)
 - Changes in Traffic Volumes (11)
 - Lack of education/outreach (12)
 - Rail Operational Context (2)
 - Lack of Transportation investment (0)
 - Time of Day/Seasonal (1)
 - Crossing Configuration (# of tracks, geometry) (12)
 - Connectivity: (2)
 - Land Use/Development: (9)
 - Vehicle Type (4)

Last Meeting Highlights - Factors

- Contributing Factors
 - Risky behavior (15)
 - Population /Demographics: (4)
 - Distraction (12)
 - Inactive Rail—Expectations (6)
 - Changes in Traffic Volumes (11)
 - Lack of education/outreach (12)
 - Rail Operational Context (2)
 - Lack of Transportation investment (0)
 - Time of Day/Seasonal (1)
 - Crossing Configuration (# of tracks, geometry) (12)
 - Connectivity: (2)
 - Land Use/Development: (9)
 - Vehicle Type (4)

Oregon Department of Transportation
Rail Crossing Action Plan

Plan Objectives

Plan Objectives - Revised

- Balance safety with quality of life
- Apply engineering solutions for improvements
- Coordinate and collaborate with railroads, road authorities and other stakeholders to improve rail crossing safety
- Strengthen education and outreach about rail crossing safety
- Leverage opportunities for rail crossing improvements
- Reduce number of rail crossings
- Strengthen enforcement of illegal and dangerous behavior near rail crossings

Oregon Department of Transportation
Rail Crossing Action Plan

**Overview Rail Crossing Incidents
(follow-up)**

A Word About This Data

- Sources include FRA, ODOT Rail Division, ODOT Transportation Data Section, Oregon State Rail Plan
- TriMet incidents not included
- Suicides excluded
- Some information is missing

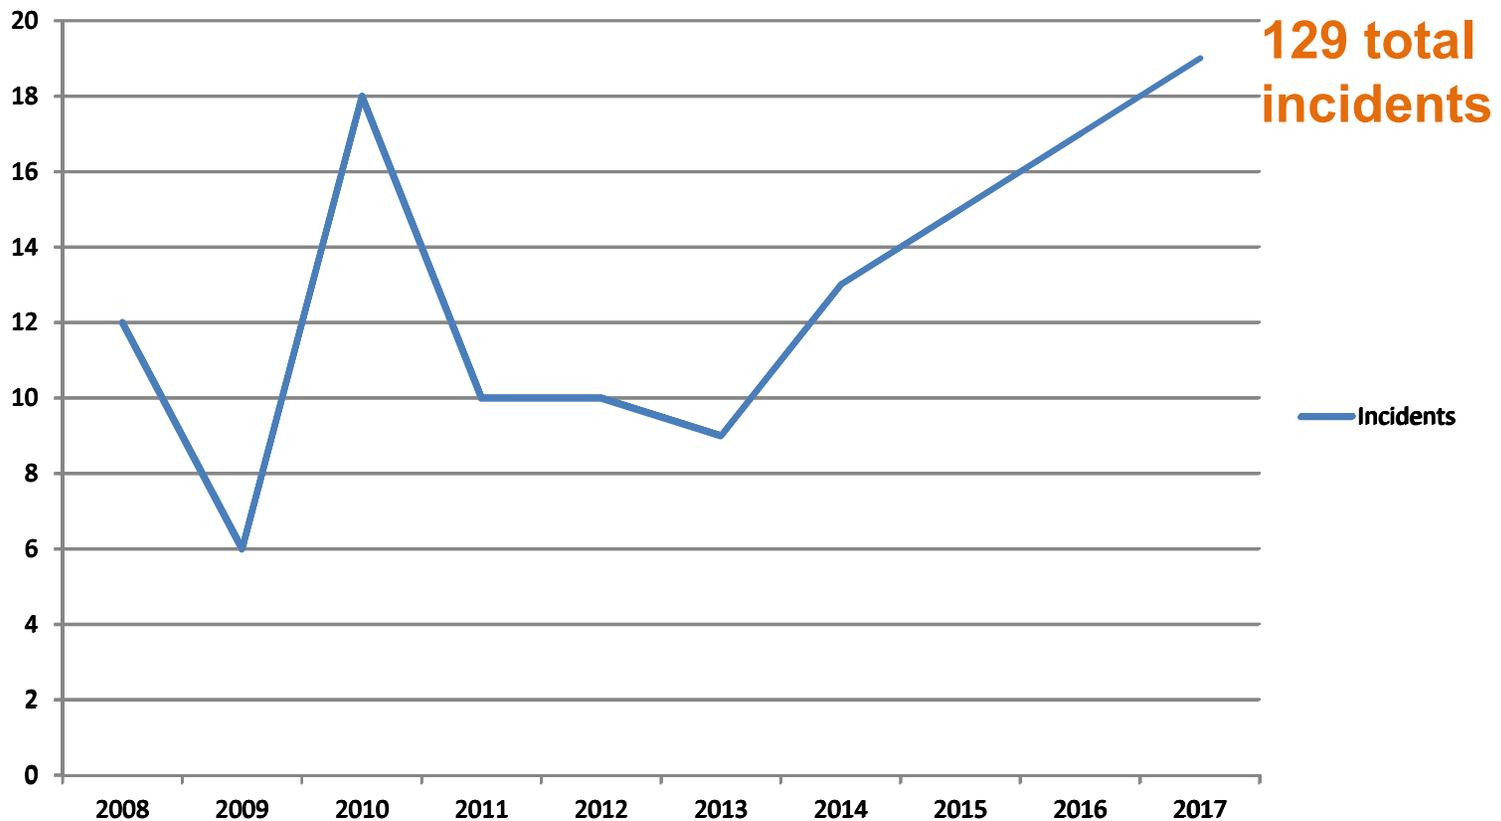

Additional Steps

- Removed confirmed suicide incidents
- Analyzed multi-incident crossings
- Other miscellaneous data cleanup

Oregon Annual Incidents

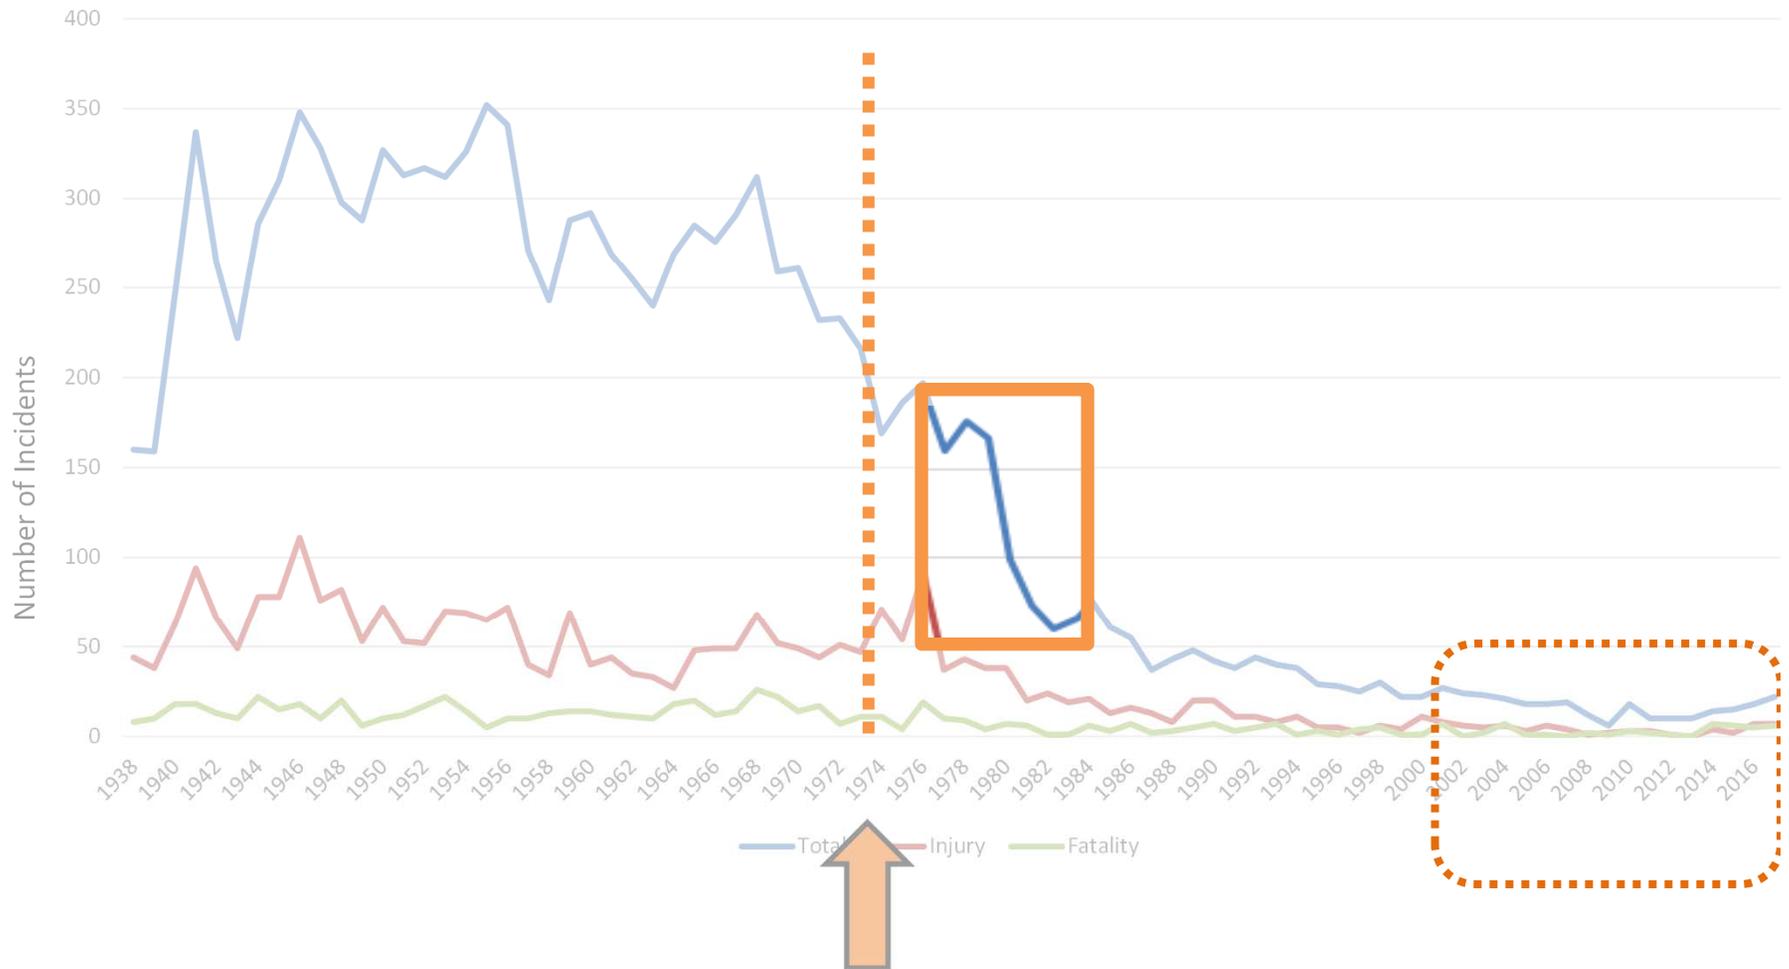

Annual Crossing Incidents

Oregon Annual Incidents

Rail Crossing Incidents

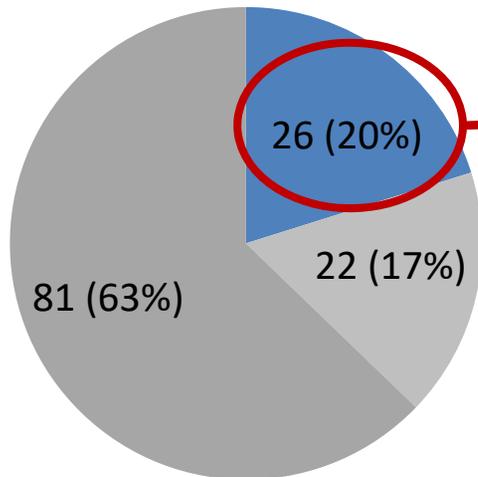

Oregon Incidents – More Info

- 2 crossings since closed
- 4 crossings have seen improvements
- 11 crossings are under study or programmed for funds
- 9 suicides removed from data going forward
 - 8 categorized at “pedestrians”
 - 1 categorized as “pickup” or PV
 - 2 of our multi-incident locations

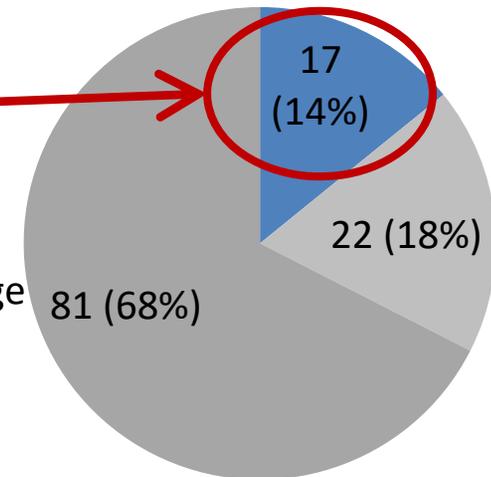

Oregon Incidents – Updated

Oregon Incidents Severity

Incident Severity (suicide excluded)

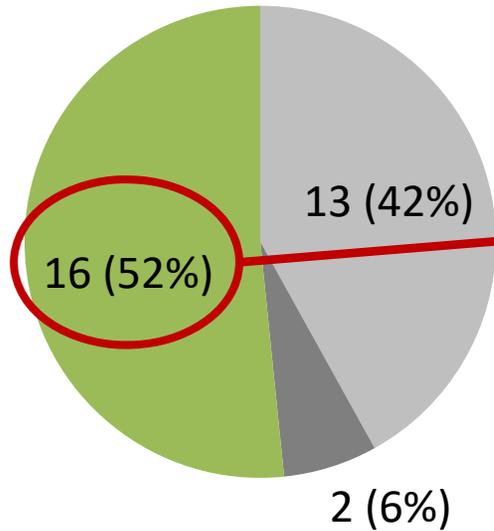

- Fatality
- Injury only
- Property or no damage

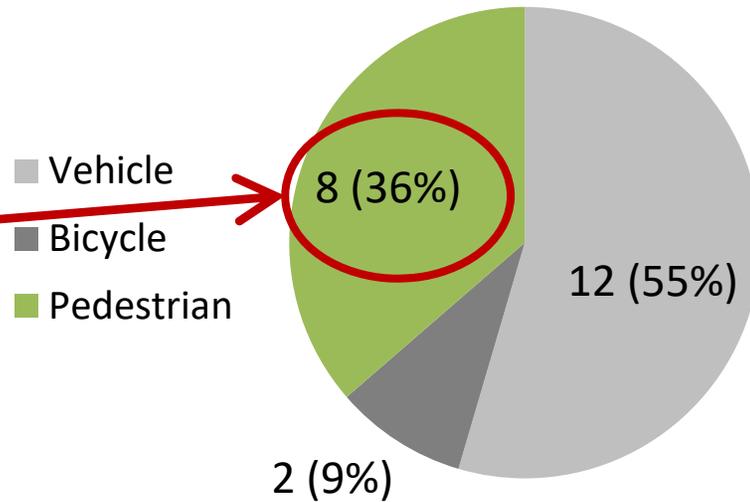

Oregon Incidents – Updated

Number of Fatalities

Number of Fatalities (suicide excluded)

- Vehicle
- Bicycle
- Pedestrian

Oregon Department of Transportation
Rail Crossing Action Plan

Incidents Analysis – Additional Info

Follow-up Info

- Crossing intersection angle
- AADT
- Road speed
- Train speed
- Number of tracks
- Number of lanes
- Sidewalk or bike lane present

Crossing Incidents

- Years analyzed 2008-2017
- No TriMet Max (6 incidents excluded)
- Public crossings only
- Reported incidents only
- “Near Misses” not included

Oregon Department of Transportation
Rail Crossing Action Plan

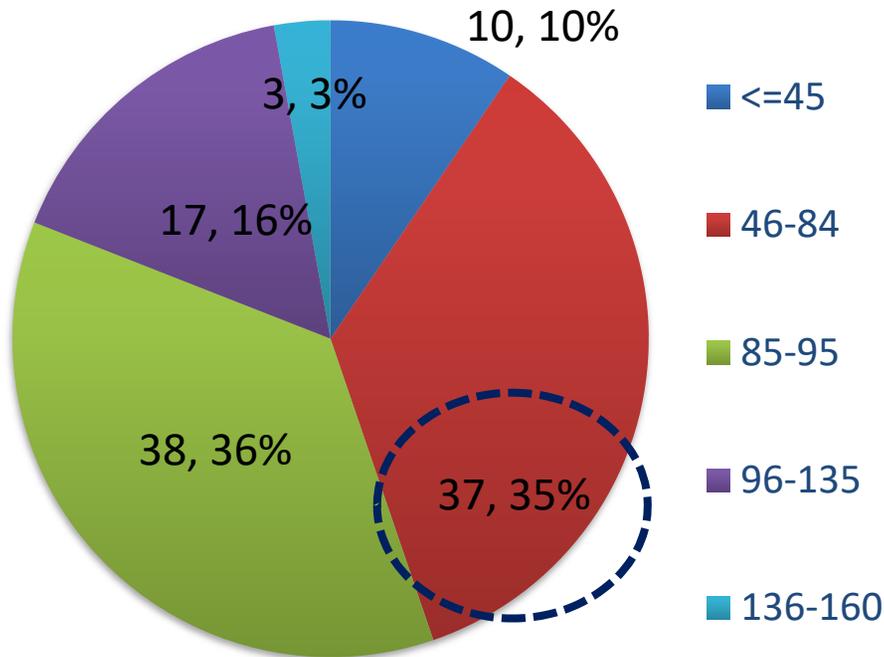

Intersection Angle

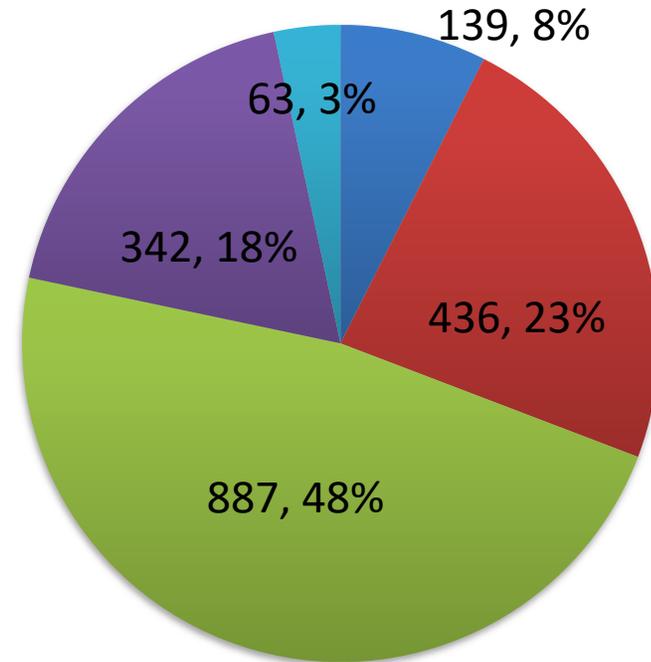

Crossing Intersection Angle

Crossing Angle at Crossings with Incidents

Crossing Angle at Oregon Crossings

Crossing Intersection Angle – Example

Oregon Department of Transportation
Rail Crossing Action Plan

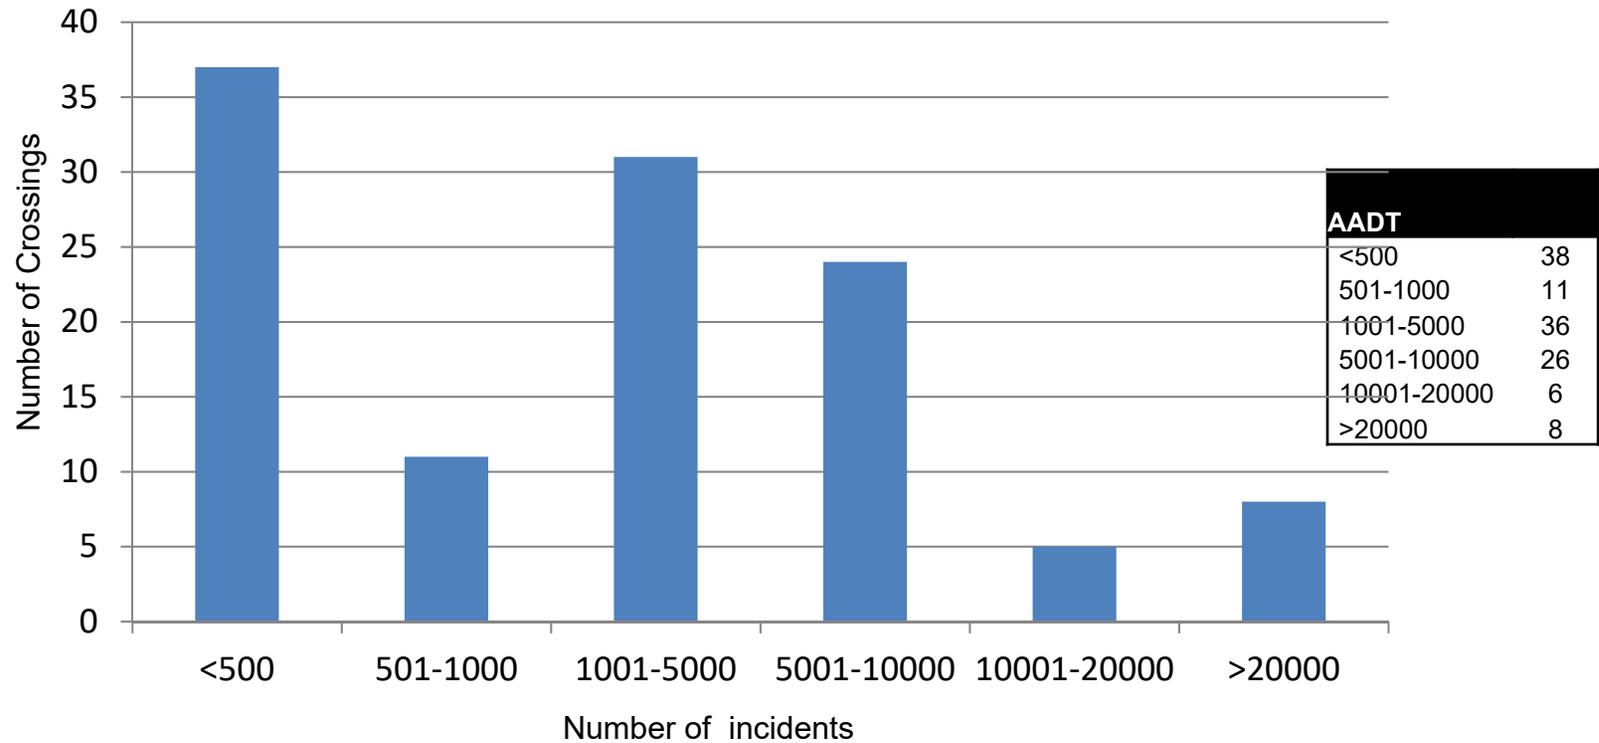

Annual Average Daily Traffic

ADDT – Incident Locations

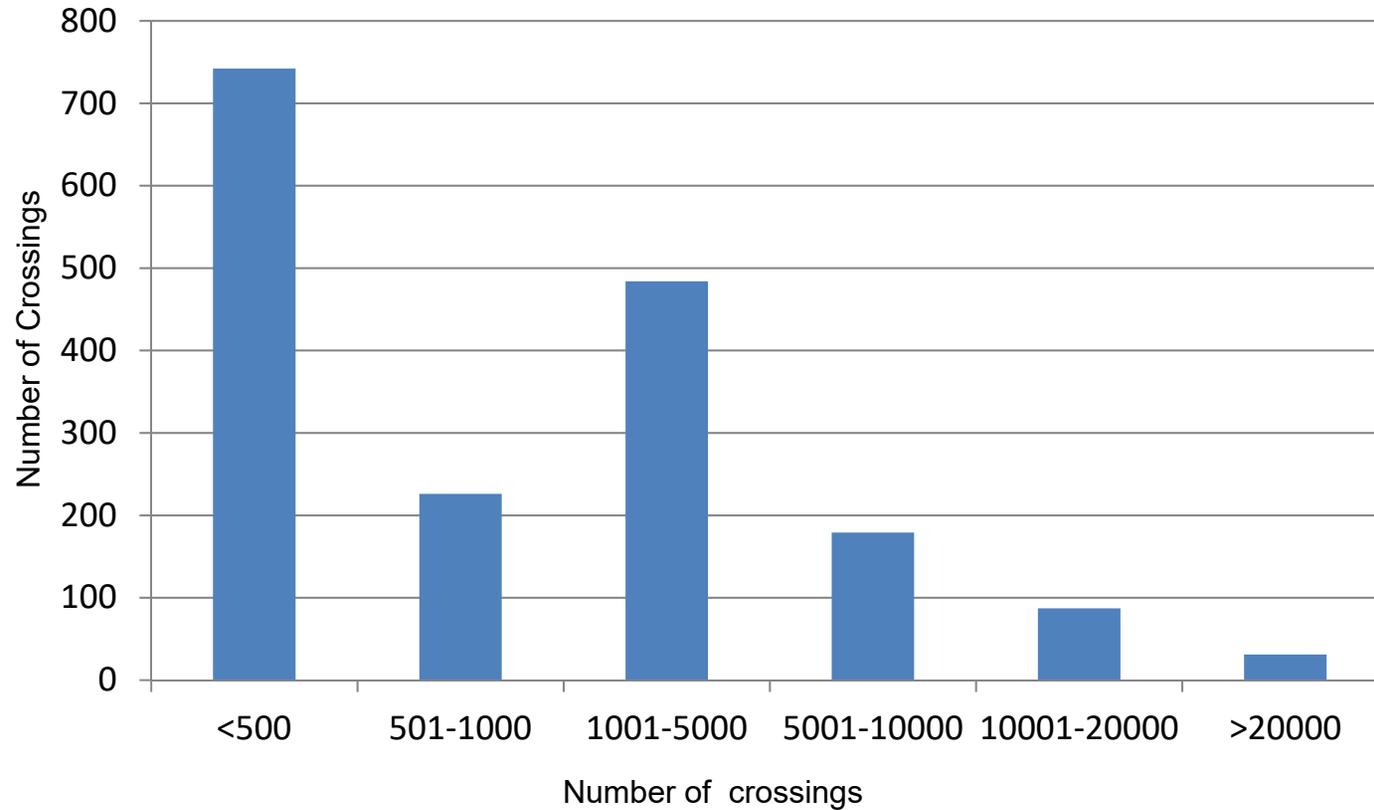

AADT at Crossings with Incidents

ADDT – All Crossings

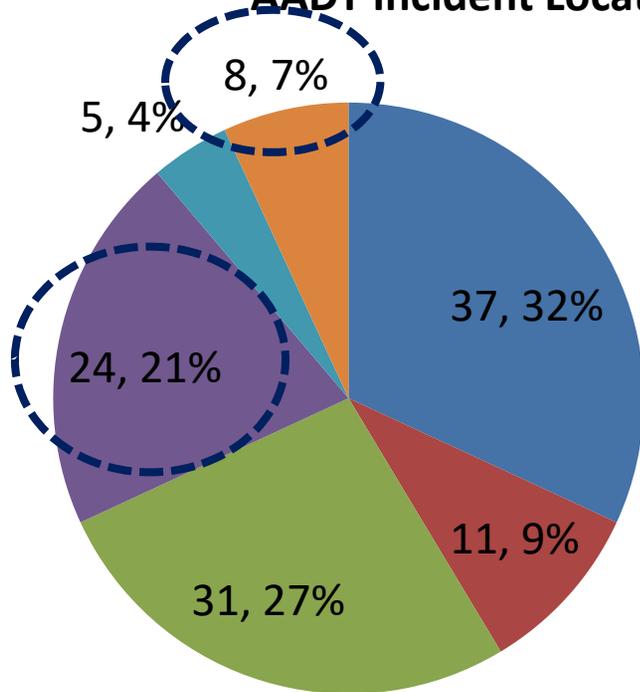

AADT at Oregon Crossings

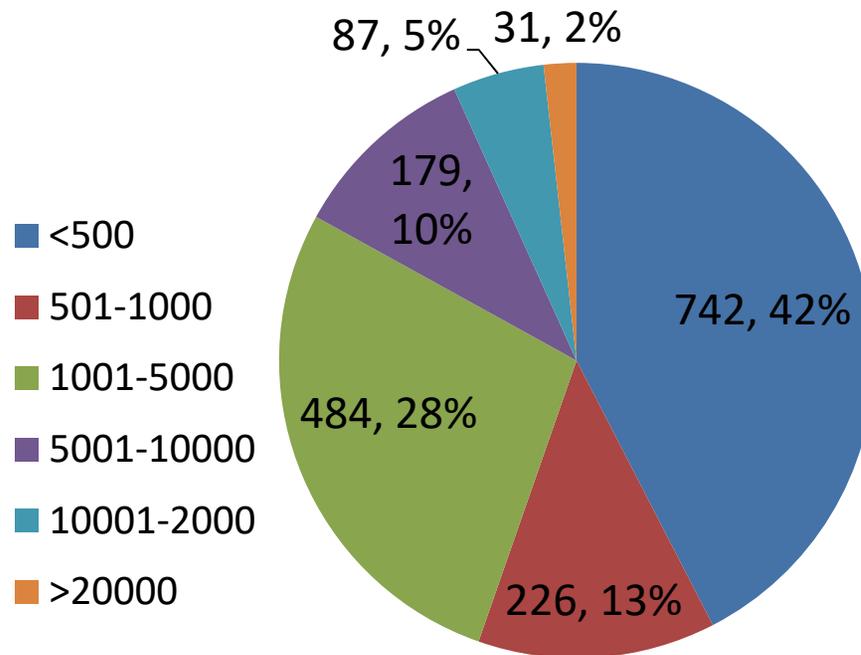

ADDT – All Crossings

AADT Incident Locations

AADT All Crossings

Oregon Department of Transportation

Train Speed

Train Speed

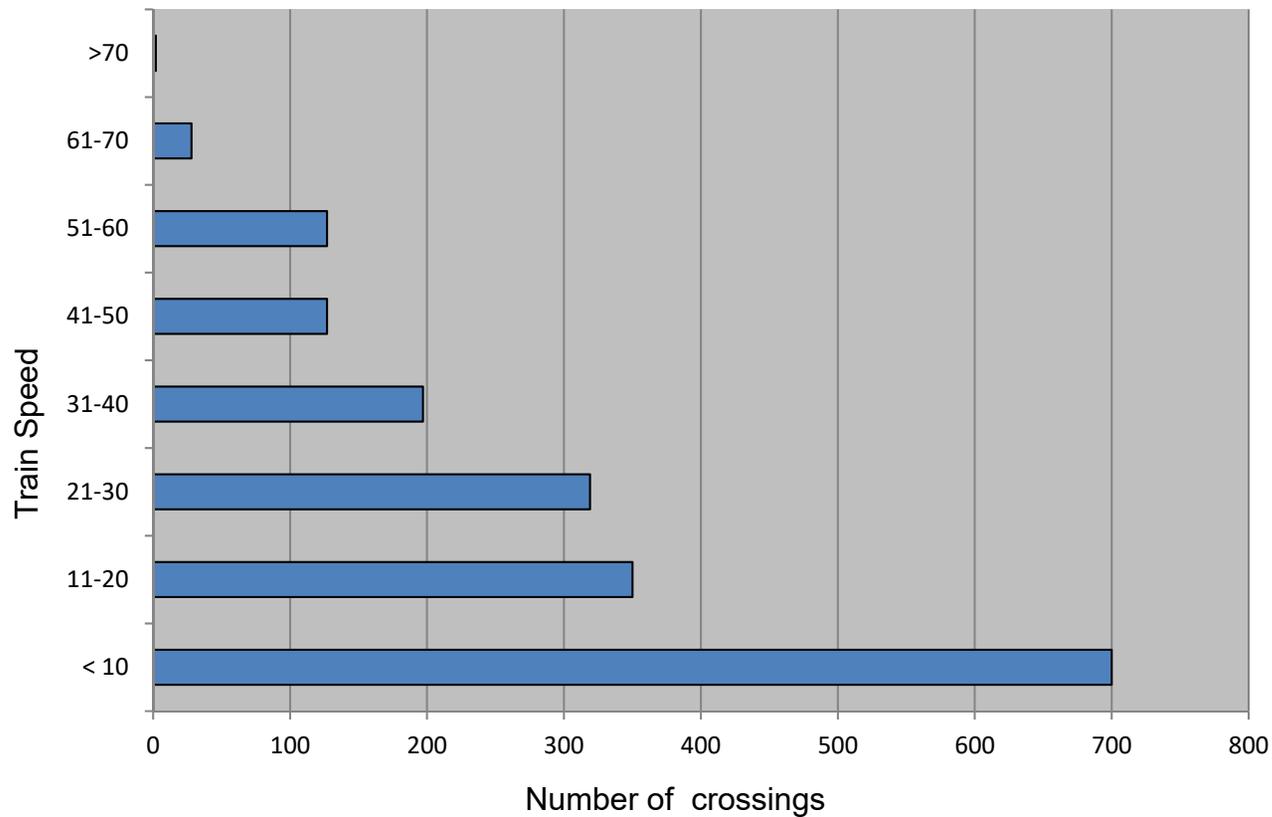

Train Speed at Crossings with Incidents

Train Speed

Train Speed at All Oregon Crossings

Oregon Department of Transportation
Rail Crossing Action Plan

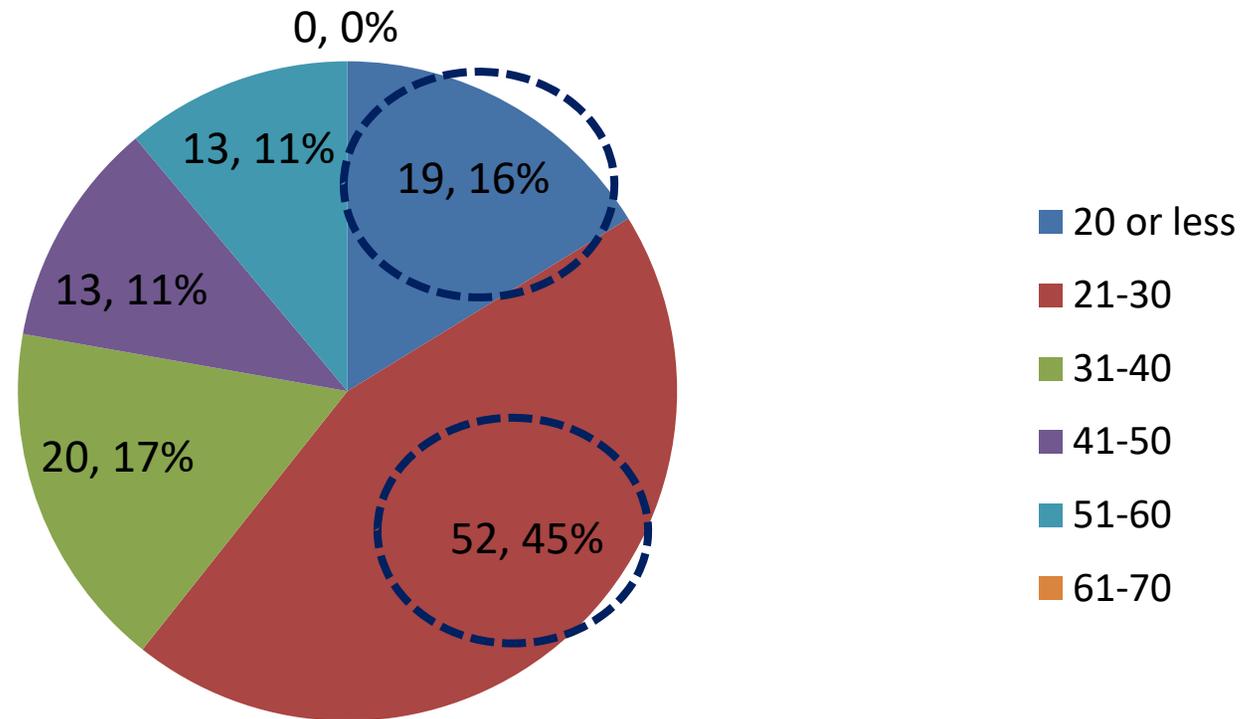

Roadway Speed

Posted Travel Speed

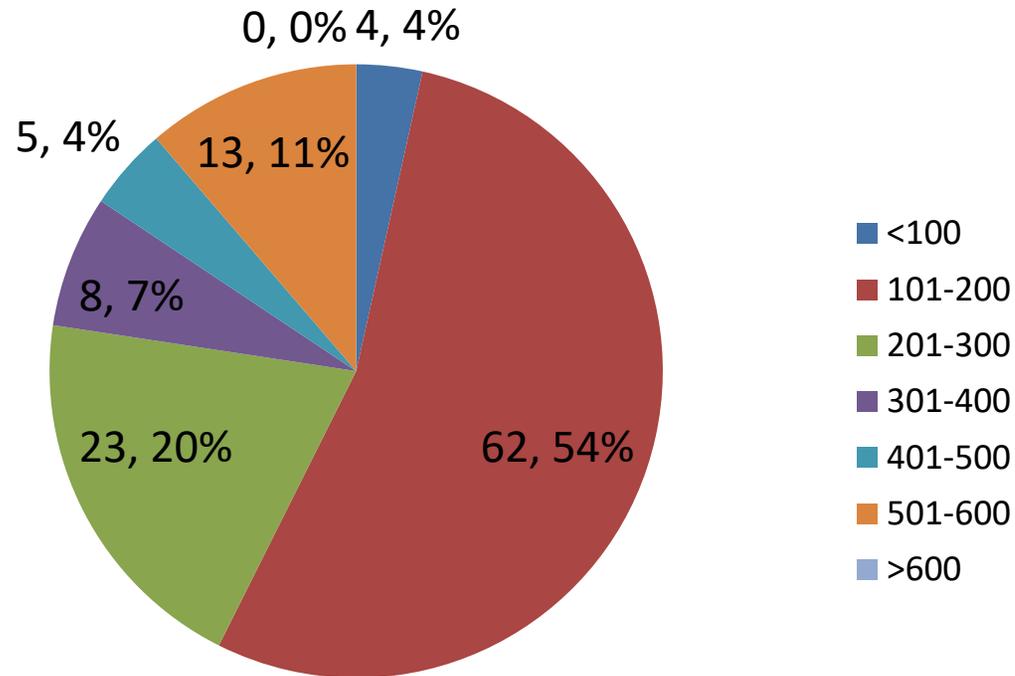

Road Speed at Crossings with Incidents (MPH)

Safe Stopping Distance – Incident Crossing

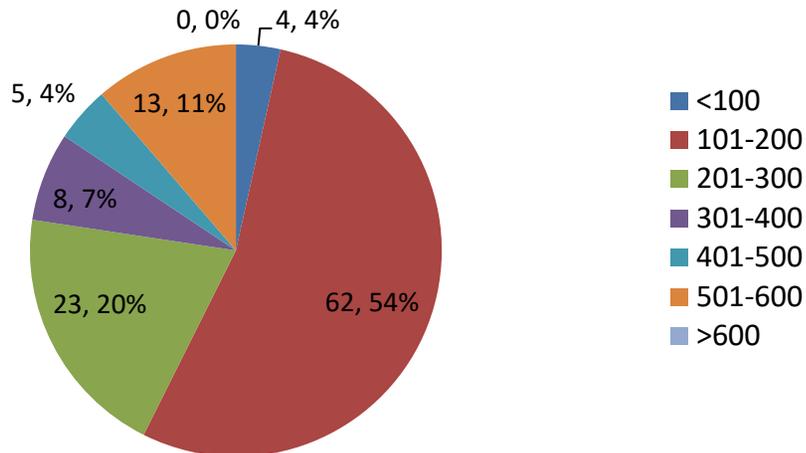

Safe Stopping Distance (ft) - Incident Locations

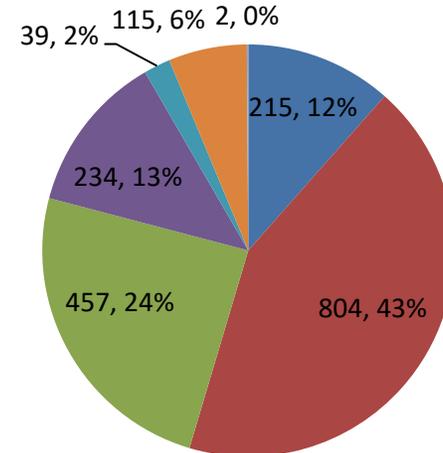

Safe Stopping Distance -

Safe Stopping Distance (ft) - Incident Locations

Safe Stopping Distance (ft) - All Oregon Crossings

Oregon Department of Transportation
Rail Crossing Action Plan

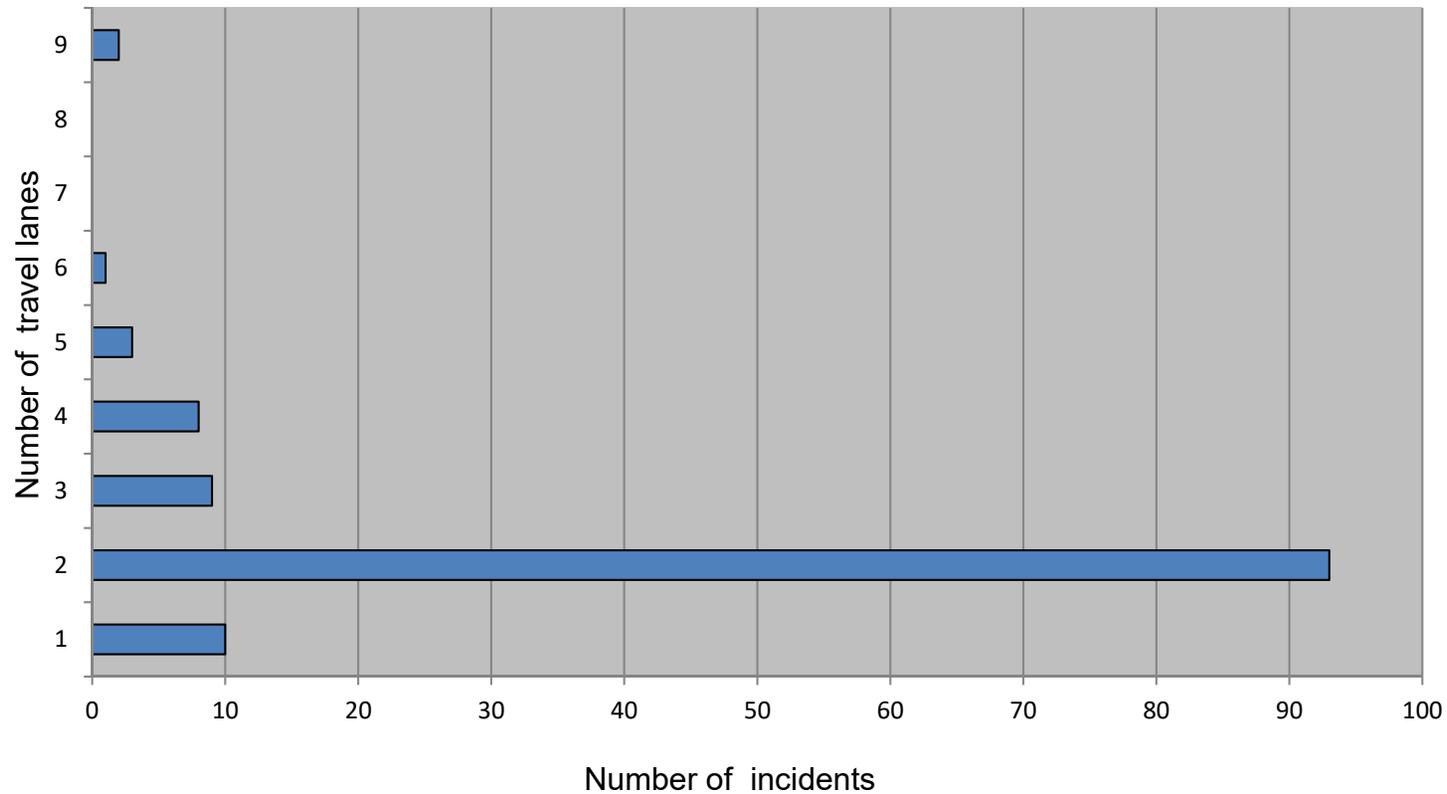

Lanes

Travel Lanes

Number of Travel lanes at Crossings with Incidents

Oregon Department of Transportation
Rail Crossing Action Plan

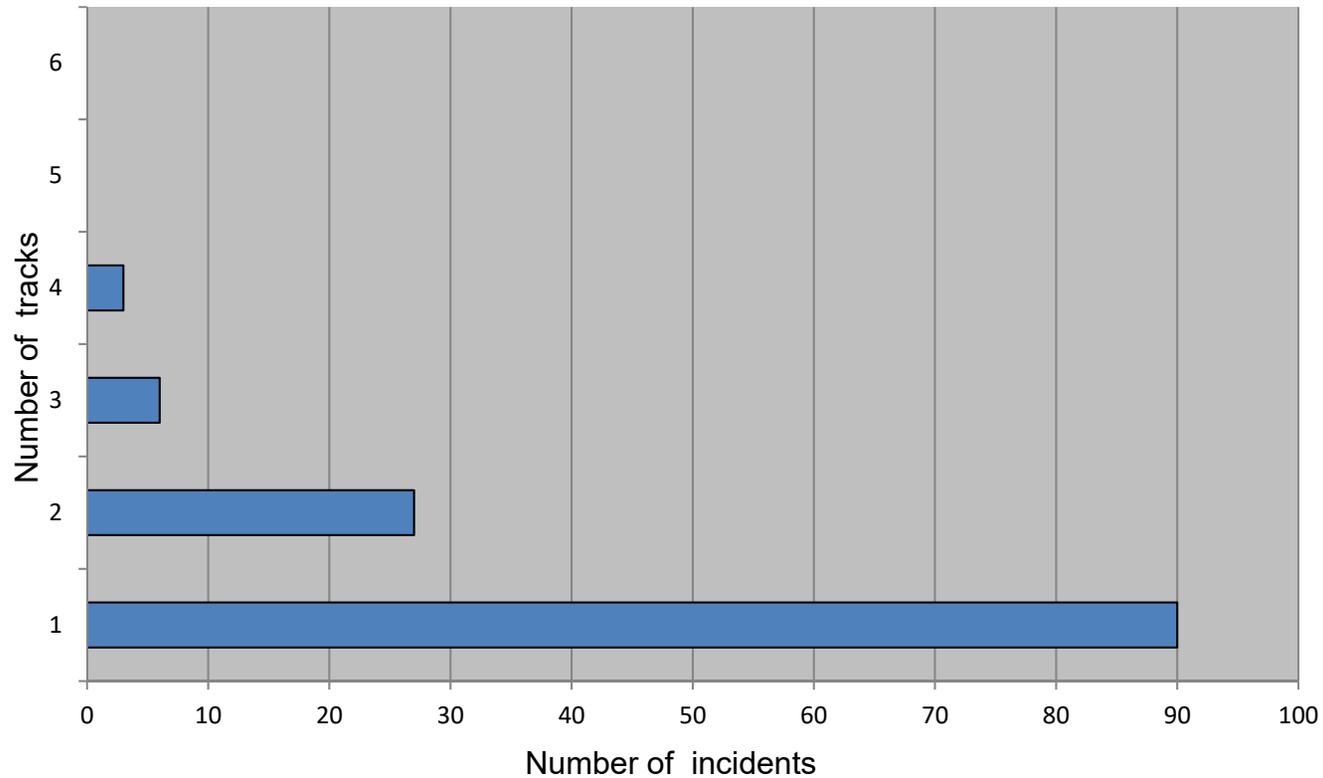

Tracks

Number of Tracks

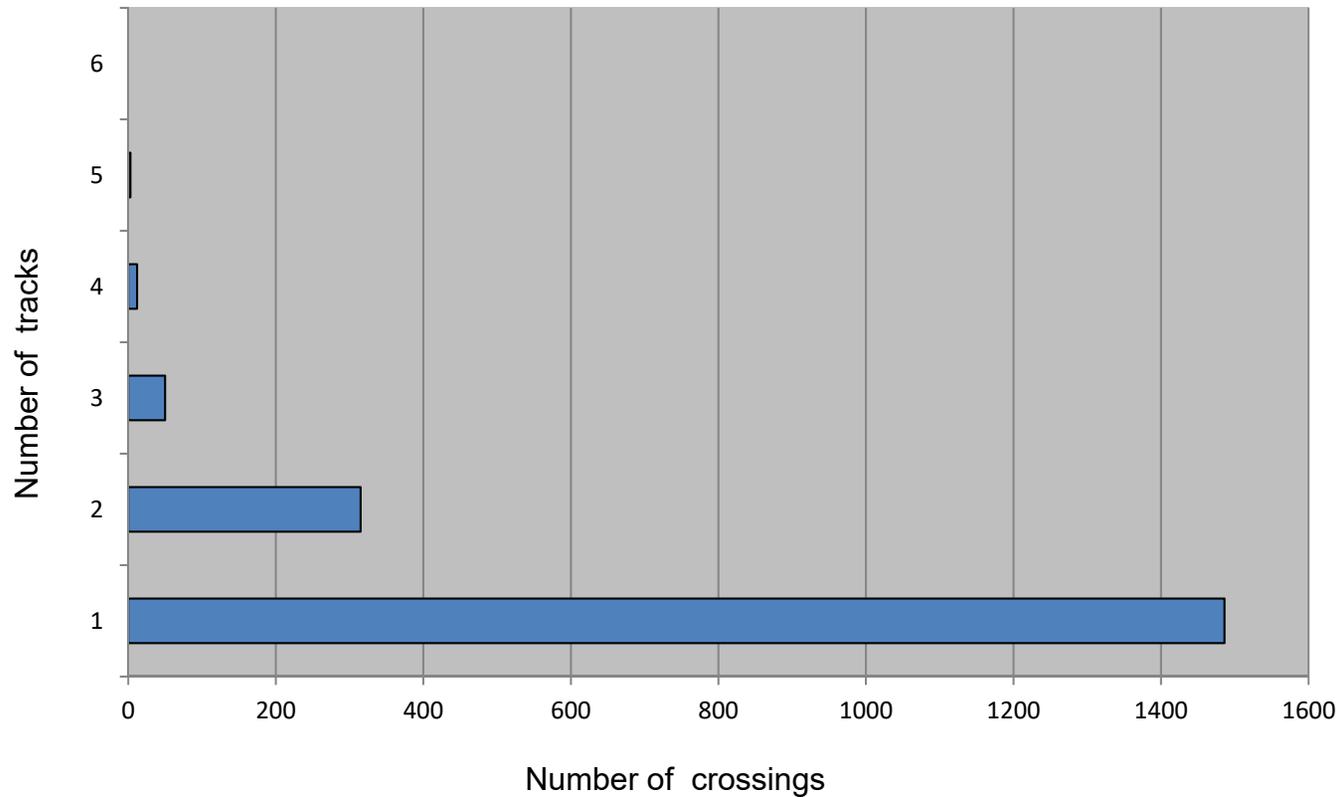

Number of Tracks at Crossings with Incident

Number of Tracks

Number of Tracks at Crossings in Oregon

Oregon Department of Transportation
Rail Crossing Action Plan

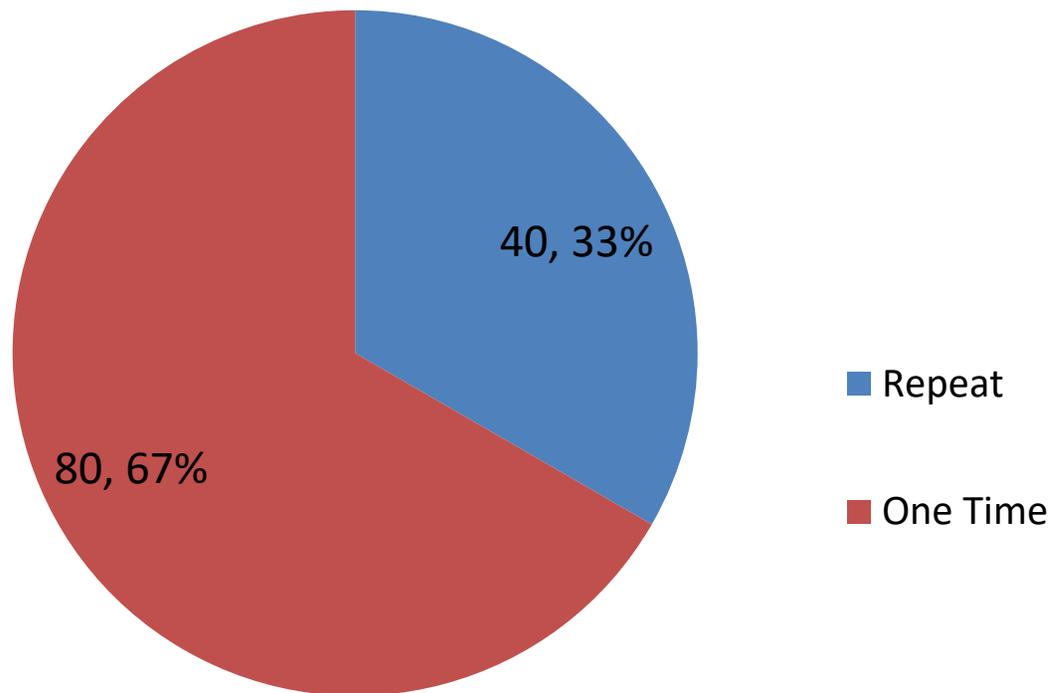

Multiple Incident Locations

Multiple Incident Locations

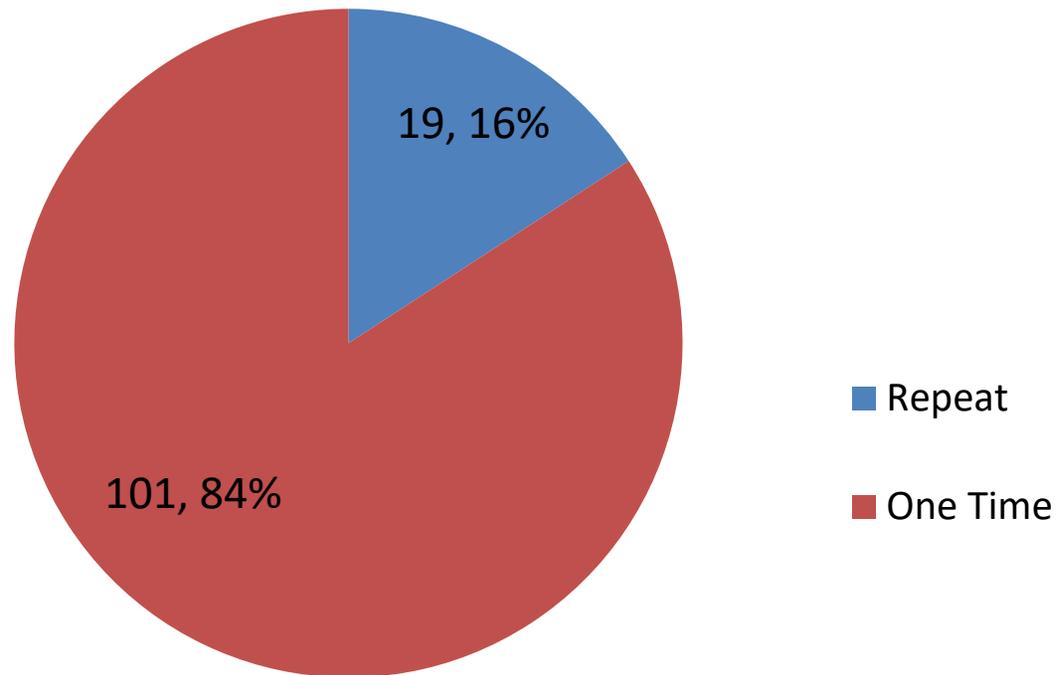

Incident Occurrence at Crossings (number of incidents)

Multiple Incident Locations

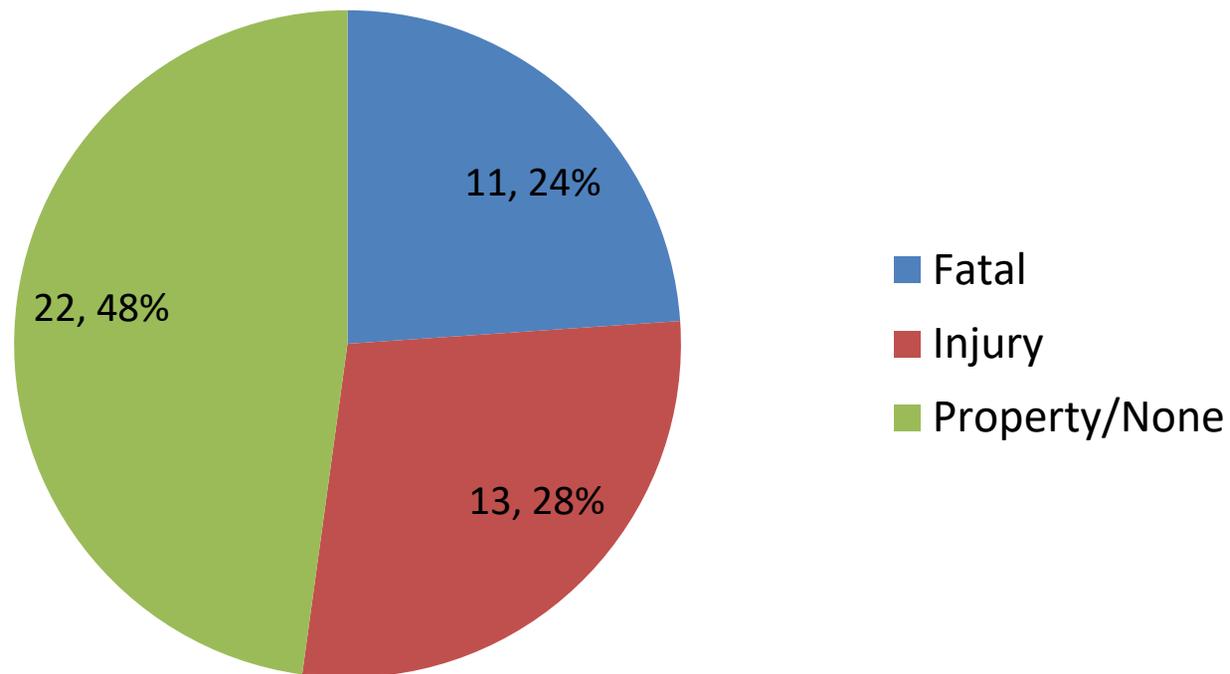

Incident Occurrence at Crossings – number of crossings

Multiple Incident Locations

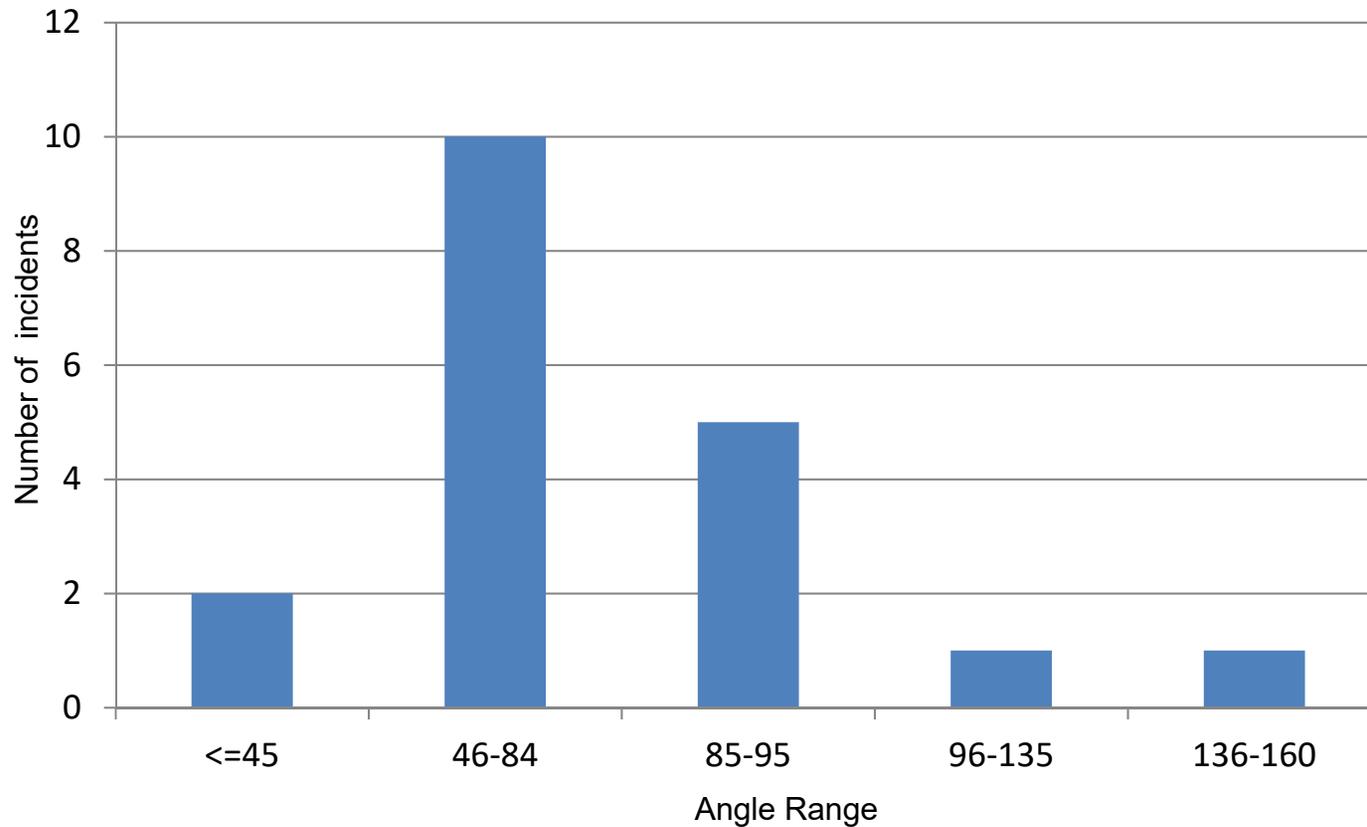

Incident Severity at Repeat Locations

Multiple Incident Locations

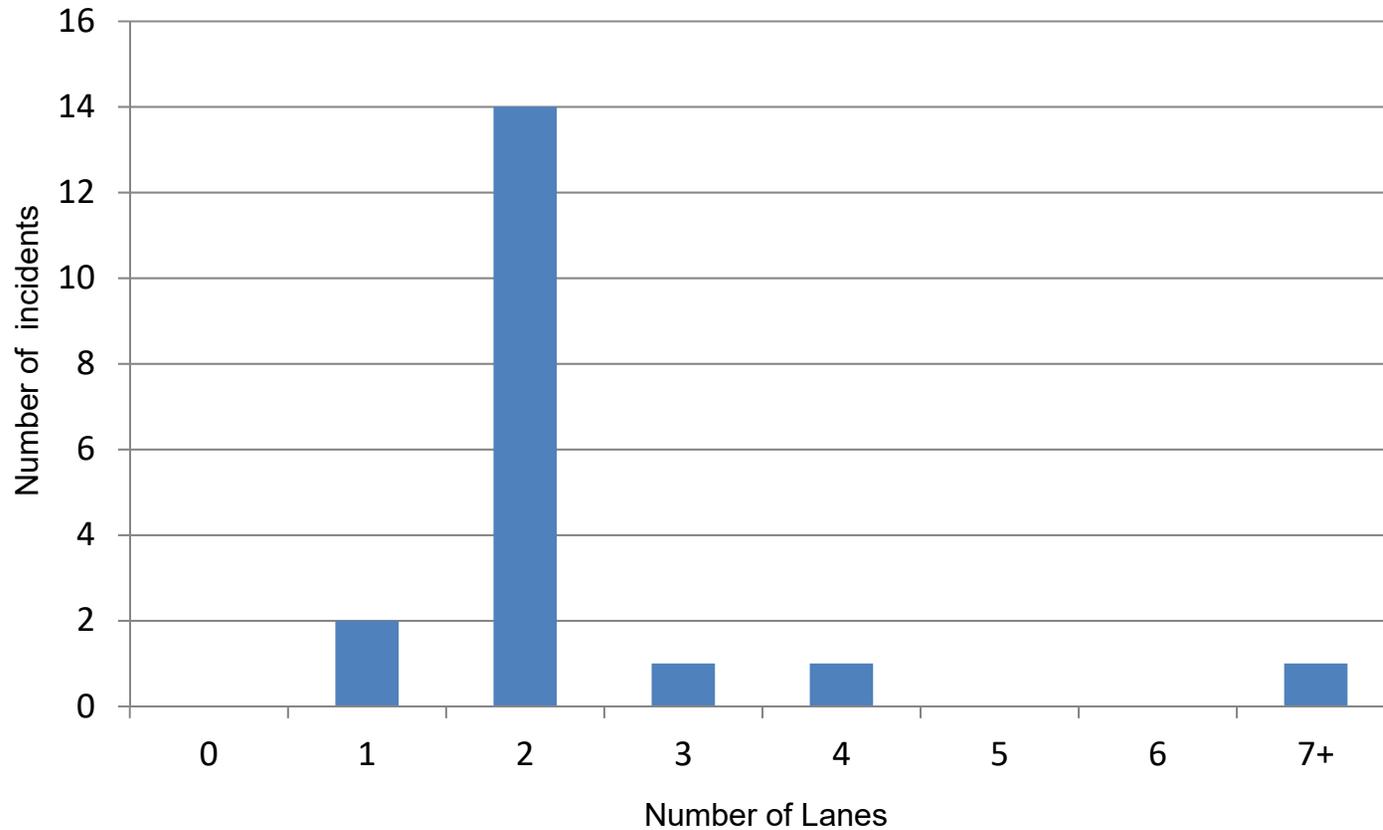

Intersection Angle at Repeat Locations

Multiple Incident Locations

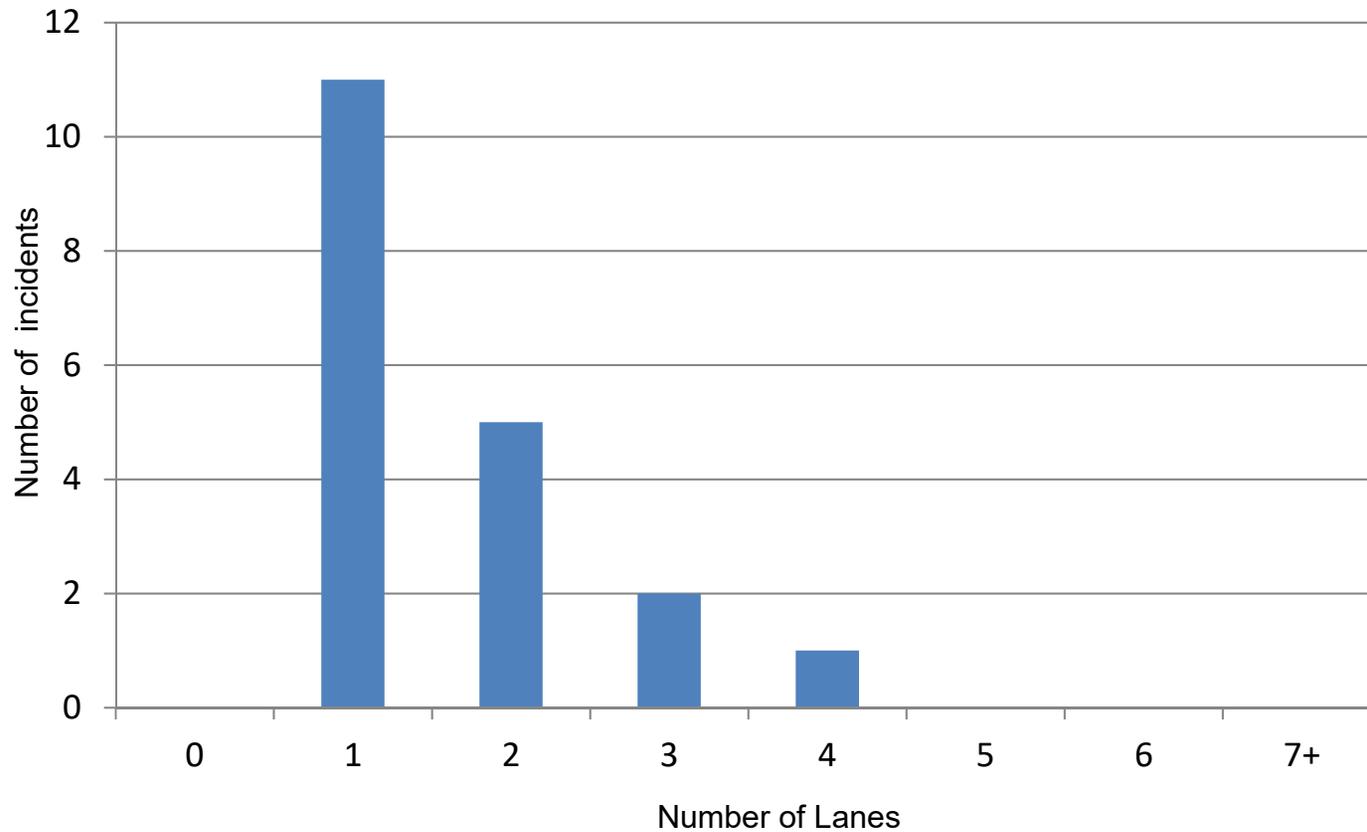

Number of Lanes at Repeat Locations

Multiple Incident Locations

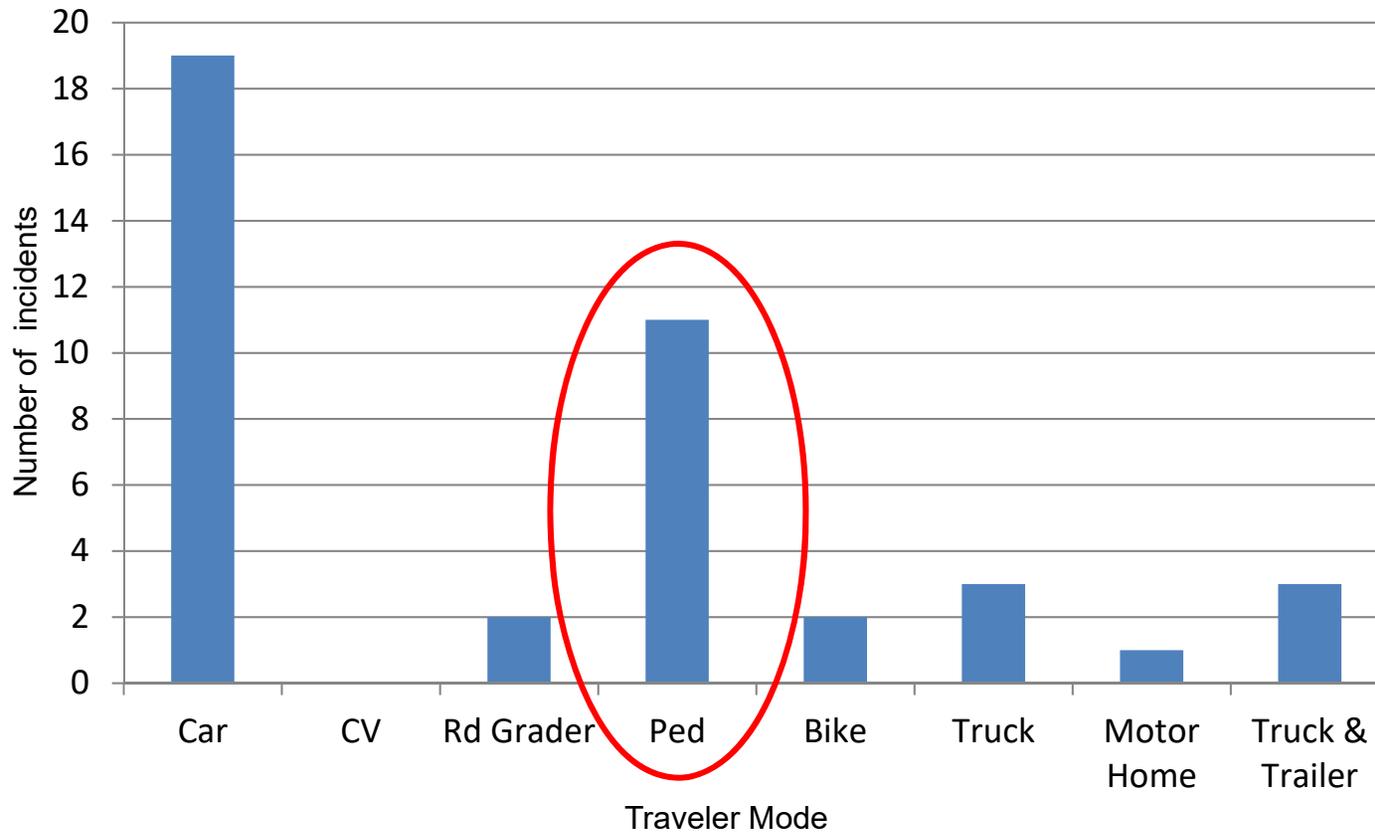

Number of Tracks at Repeat Locations

Multiple Incident Locations

Traveler Mode

Multiple Incident Locations

- 20 locations had 2 or more incidents
 - 2 had 3 reported incidents: Pendleton and Umatilla
 - 1 has been closed; 4 have been upgraded
 - 3 had “severe” angles
 - 1 is documented with 9 travel lanes (Beaverton)

Oregon Rail Crossing Incidents – Conclusions about Multi-incident Locations

- Activity – 2 suicides, 2 stalled vehicles, went around gates
- Conditions – 2 weather related
- Locations
- Upgrades / closures since
 - 1 Closure
 - 4 crossing upgraded (Donald, Woodburn, Pendleton, Umatilla)

Oregon Rail Crossing Incidents – Conclusions from Additional Data

- Correlation between angle and incidents
- Pedestrian fatalities large portion
- Posted speed – lower speeds stronger correlation
- AADT – correlation with higher AADT

Oregon Rail Crossing Incidents – Overall Conclusions

- What are the key issues in Oregon impacting crossing safety

Putting the Pieces Together

- Report Outline
 - Current system
 - Rail Incidents – history and last 10 year
 - Key Trends and Analysis
 - Objectives
 - Strategies
 - Examples and Tools

Oregon Department of Transportation

Break

Oregon Department of Transportation
Rail Crossing Action Plan

Strategy Development

Defining the Key Terms

- Vision – The future we want to arrive at (defined in the OTP, Rail Plan and TSAP)
- Goal – Refines the vision, provides more description of the future
- Objectives – Describe how we can arrive at the goal (we did this last time)
- Strategy – Specific things to do to implement the objectives
- Action – Sub-level of strategies - provide the most explicit detail of what to do to achieve the objectives – not likely to be in this Plan

Defining the Key Terms

- Vision – The future we want to arrive at (defined in the OTP, Rail Plan and TSAP)
- Goal – Refines the vision, provides more description of the future
- Objectives – Describe how we can arrive at the goal (we did this last time)
- Strategy – **Specific things to do to implement the objectives**
- Action – **Sub-level of strategies - provide the most explicit detail of what to do to achieve the objectives – not likely to be in this Plan**

Oregon Department of Transportation
Rail Crossing Action Plan

Plan Strategies Development

Strategies – Highlights from Other States

- Utah –
 - Risk based assessment
 - Developed pedestrian crossing guidance
- Minnesota –
 - Crude oil routes prioritization
 - Established an expert panel for funding process
 - Used a factor that coupled AADT and devices (a vs p) and established thresholds

Strategies – Highlights from Other States

- Nevada -
 - Factor for truck volumes due to the nature of crashes
- California
 - Improved funding prioritization with near miss info
- Georgia
 - Coordinates with school district for crossing usage reporting and prioritization

Rail Crossing Action Plan

A	B	C	D	E	F	G	H	I
Focus Area	Plan Objective	TSAP EA	Issue	Strategies	Notes/Actions	RS Comments	9/20/18 focused on Training and Outreach	
Driver Behavior	Apply engineering solutions for improvements	Risky Behavior	Risky behavior of driving around activated gates results in incidents	Develop a toolkit of countermeasures and device options such as extended gate times, additional gates, etc.				
Driver Behavior	Apply engineering solutions for improvements	Improved System	Drivers are not aware of second train	Evaluate current signage and visibility for high risk crossings with multiple tracks	Explore effective options beyond number of tracks signage			
Engineering	Apply engineering solutions for improvements	Infrastructure	Interconnected signals are expensive and require local jurisdictional involvement therefore may be lacking	Prioritize crossings with related incidents or near misses for interconnection updates		There is no data indicating interconnection is an issue. The standards for interconnected crossing	Rewrite and broaden	
Engineering	Apply engineering solutions for improvements	Infrastructure	Crossings with passive warning signage may be challenging to see in inclement conditions	Explore options for improvement	Options may include improving reflective materials on signage, additional advance warning signs, etc.		refine this strategy	
Engineering	Apply engineering solutions for improvements	Infrastructure	Queueing at areas near crossings results in drivers getting stopped on tracks	Work with local road authorities to install signal interconnections where appropriate	<ul style="list-style-type: none"> Determine queueing criteria to identify impacted crossings Investigate improvement options (e.g. lengthen warning time, etc.) 	Need to discuss this one more.		
Engineering	Apply engineering solutions for improvements	Infrastructure	Signal lights may not be adequate or the latest technology	Explore options for improved illumination	Consider LED upgrades and other options			
Engineering	Apply engineering solutions for improvements	Infrastructure	Humped crossings present ongoing engineering challenges and poses dangers for travelers, including those with trailers	Establish crossing condition criteria that when applied warrant further investigation	<ul style="list-style-type: none"> Examine crossings with humped crossing related incidents Identify crossings with profile change greater than 3 for engineering improvement considerations Develop list of treatment options including improved advance signage, crossing improvements, etc. 			
Engineering (change to Funding?)	Apply engineering solutions for improvements	Infrastructure	Poor, irregular and inconsistent crossing surface and approaches present operation difficulties for road users, often resulting in sudden braking or difficult crossings	Develop an identification process for rough crossings and prioritize for improvements	<ul style="list-style-type: none"> Identify crossings with poor, irregular or inconsistent crossing surfaces for improvements through a process that includes established rough crossing criteria Investigate crossing surface innovations and solutions to develop slate of improvement options to employ at priority crossings Add prioritization weight for these crossings in project selection process 	Need to first develop a funding source for crossing surface projects. Our current funding is not available for surfacing projects.	Crossing surface is important but difficult to improve and maintain due to funding constraints and jurisdiction	
Funding Allocation	Apply engineering solutions for improvements	Infrastructure	Grade separations are cost prohibitive	Establish an "Immediate Opportunity" program to match opportunity funds for grade separation projects	Have Work with RAC to evaluate system needs and priority projects			
Multimodal Users	Apply engineering solutions for	Infrastructure	Crossing surfaces may be dangerous for pedestrians and	Review and prioritize multimodal surfaces for improvement techniques	Investigate best practices for options	Need to first develop a funding source for

Strategies – Oregon

- Handout discussion – Questions to Consider
 - Do the strategies mirror the themes we've discussed?
 - Are there any broad themes missing?
 - Goal – make sure strategies capture important needs and ideas

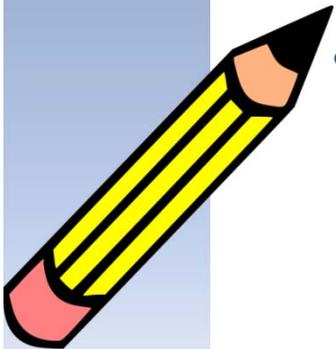

Strategy Review and Discussion

For Consideration and Discussion

- Do the draft strategies adequately set the stage for addressing crossing safety issues?
- Are you aware of successful or unsuccessful strategy efforts?
- -
- -
- -

Oregon Department of Transportation
Rail Crossing Action Plan

Crossing Improvement Prioritization

Funding

- ODOT Rail Crossing Funding
 - 3 Primary Categories
 - Dedicated Funding for Crossing Upgrades
 - State Highway Funds - \$300,000 annually
 - Section 130 funds - \$3,000,000 annually
 - » 50% required to be used for warning devices
 - » 10% non-fed match required
 - Grant Opportunity
 - » FHWA/FRA
 - » requires ODOT state match

Funding Prioritization – Dedicated Funds

- Current Process

- JAQUE – creates a 200% list
- Regional staff input and local jurisdiction coordination
- 150% list established
- On-site diagnostics with stakeholders
- Consideration of other factors
 - Region / local request
- Final Decision: Rail Crossing Safety Manager

Funding Prioritization – Draft Recommendations

Identifying critical crossings for improvements

HI (AADT, angle, multimodal crossing, crash history & severity etc)

+

RP (population, bus, hazmat, freight, etc)

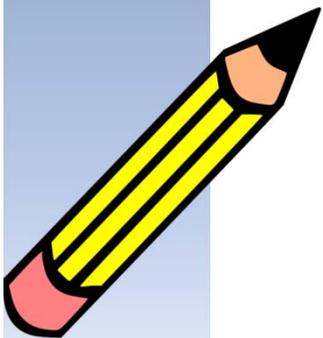

+

MI (leverage, prior upgrades, etc)

Funding Prioritization

- JAQUE – which considerations should supplement the formula?
- RI- which route types are important?
- MI – other factors to consider?

Next Steps

- Parking Lot
- Synthesize what we heard today
- Final Plan Early 2019
