

OR 217 AUXILIARY LANES

Construction on OR 217 is underway

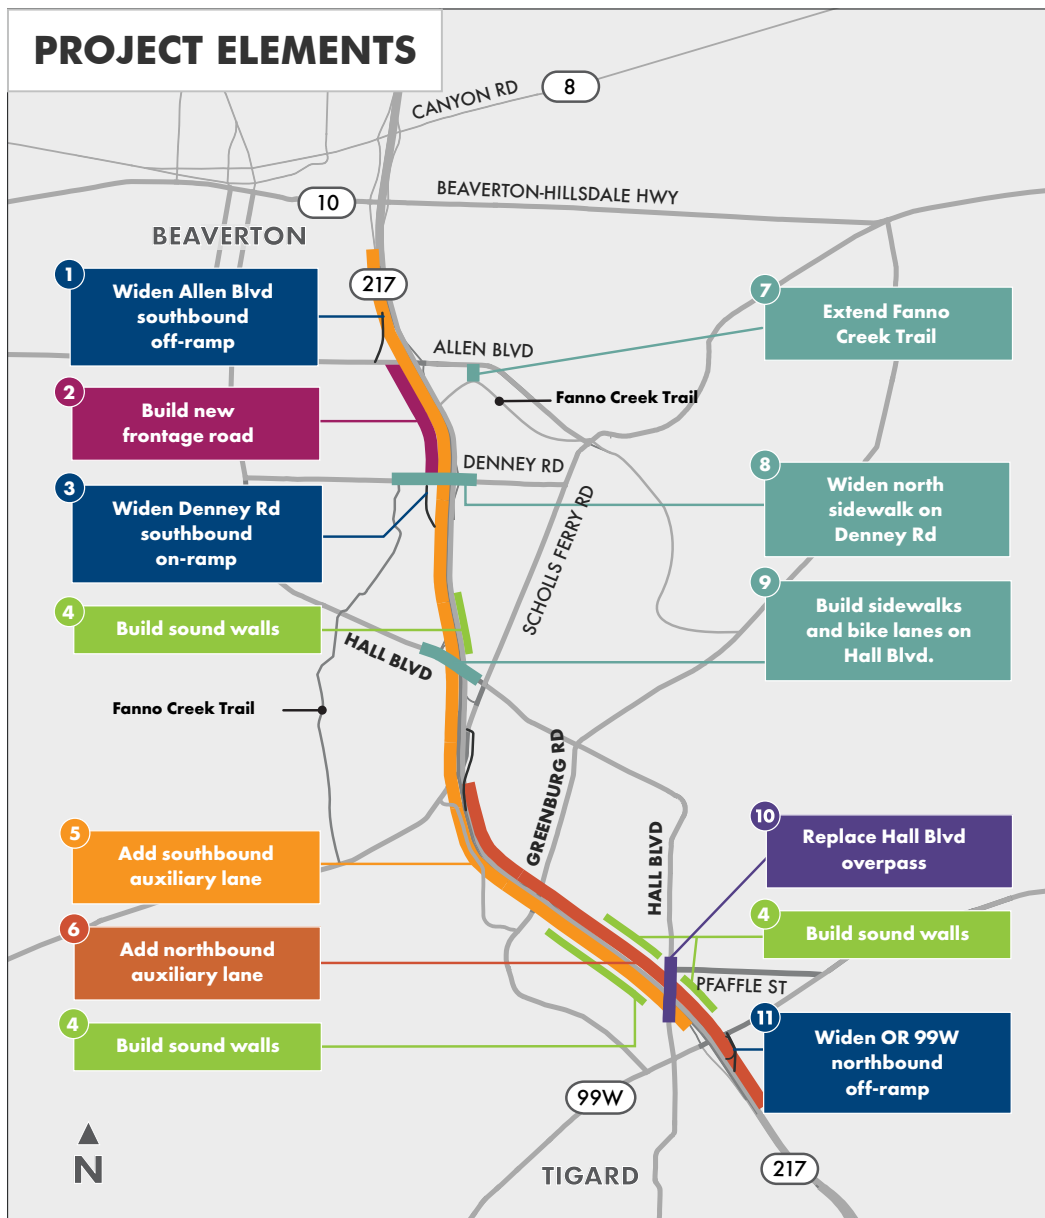

About the project

We are working to improve safety and address longstanding bottlenecks on Oregon 217 and complete the parallel north/south bicycle and pedestrian network. This project features construction of auxiliary lanes along northbound and southbound portions of the highway between Beaverton-Hillsdale Highway and OR 99W. Auxiliary lanes are ramp-to-

ramp connections on the highway that reduce congestion by giving drivers more space and time to merge safely. Primarily funded through the Keep Oregon Moving transportation package, the total project cost is \$158 million. The City of Beaverton and Washington County are also funding partners.

January 2024

PROJECT ELEMENTS

Elementos del Proyecto

1. Ampliar la rampa de salida hacia el sur de Allen Blvd.
2. Construir una nueva vía lateral.
3. Ampliar la rampa de entrada hacia el sur de Denney Rd.
4. Construir cuatro barreras acústicas.
5. Agregar un carril auxiliar hacia el sur.
6. Agregar carriles auxiliares hacia el norte.
7. Extender el sendero Fanno Creek Trail.
8. Ampliar la acera del lado norte de Denney Rd.
9. Construir aceras y carriles para bicicletas en Hall Blvd.
10. Reemplazar el paso elevado de Hall Blvd.
11. Ampliar la rampa de salida hacia el norte de OR 99W.

Construction timeline: December 2021 through 2025

Major work and traffic impacts began in January 2022. Much of the work on OR 217 will take place at night when traffic volumes are lower. However, daytime work is unavoidable and we anticipate more traffic and congestion in the area during construction.

We'll continue to share more detailed construction information and what you can expect on our website and through email notifications. For major closures, we will also share information more widely through media and advertising.

Tips for traveling safely in work zones

♦ Orange is your cue!

Pay attention when you see orange signs, barrels, cones and barricades.

♦ Obey all speed signs.

Speeds will be reduced on OR 217 and Scholls Ferry Road for your safety and the safety of others.

♦ Expect delays.

Leave early so you can travel safely through the work zone.

What you can expect during construction

During construction, we'll be working in different geographic areas depending on the project phase. We'll do our best to minimize impacts because we know construction can be disruptive. With some patience, we'll all benefit from a safer and more reliable highway once this project is complete.

For drivers

Highway lane closures

- Lane closures will routinely occur at night between 9 p.m. and 5 a.m.
- Around-the-clock lane closures will happen several times for up to nine days at a time.
- Full closure of one direction of OR 217 at a time for up to five weekends.
- Short-term closures of existing auxiliary lanes.

Ramp closures

- Highway ramp closures will routinely occur at night between 9 p.m. and 5 a.m.
- Denney Road: up to five-month closure of the southbound on- and off-ramps during construction of the new frontage road.
- Hall Boulevard: up to two-month closure of the on-ramp to OR 217 south.
- OR 99W: up to two-month closure of the north on-ramp to OR 217 north.
- Other OR 217 on- and off-ramp closures for up to two weeks.

Local road impacts

Lane closures and some nighttime full closures on local roads adjacent to OR 217 including Hall Boulevard, Allen Boulevard, Denney Road, Scholls Ferry Road, Greenburg Road and OR 99W.

For drivers

SW Hall Boulevard overpass near OR 99W closure (Tigard):

Up to a nine-month closure of the Hall Boulevard overpass between OR 99W and Pfaffle Street in Tigard to motor vehicles.

For people walking, biking, rolling and taking transit

Detours

A temporary bicycle and pedestrian bridge will be available for non-motorized use while the Hall Boulevard overpass in Tigard is closed.

- OR 217 shoulders will be closed to people on bikes for the duration of the project.
- People biking on local streets in the project area may be directed to ride in the travel lane or use a different route due to short-term shoulder or lane closures.
- Pedestrians on local streets in the project area may encounter sidewalk closures, in which case signed ADA-accessible detour routes will be posted.

Transit

There may be short-term impacts to bus stops and routes. Look for more information at the bus stops and on [TriMet.org](https://www.trimet.org). The WES Commuter Rail will be unaffected during construction.

For nearby residents and businesses

Noise

Nighttime work is needed to minimize traffic impacts. When crews are working nearby, residents and businesses may hear construction noise and feel vibrations. Call our 24/7 noise hotline (503-412-2349) to reach a person to discuss nighttime noise concerns.

Lighting

When crews are working nearby at night, residents may notice light in the construction zones.

Vegetation

Crews will need to remove a limited number of trees and vegetation in the project area on ODOT property.

DESIGN

CONSTRUCTION

What are auxiliary lanes?

Auxiliary lanes are ramp-to-ramp connections on the highway that help reduce congestion by giving drivers more space and time to merge safely. This decreases conflicts, improves safety and the flow of traffic, and ultimately allows the existing lanes to work more efficiently. Our studies show that auxiliary lanes reduce crashes by 20-30%. The new auxiliary lanes will span several interchanges in both directions of OR 217. You can merge at any point while traveling in the auxiliary lane.
