

ODOT Improves the U.S. 30 Corridor

Safety & preservation improvements coming your way!

This overview is designed to share the travel impacts and improvements coming your way. In these projects, we can look forward to increased safety and improvements to our roads, bridges and environmental impact.

US 30: connecting community & commerce

These roads carry an average of 30,000 vehicles daily and are a vital part of our transportation system. They connect communities and goods, and include the St. Johns Bridge, a historic landmark.

A \$38 million+ investment:

- Increases travel safety.
- Preserves roads and bridges.
- Builds protections for our rivers.

RECENT WORK

St. Johns Bridge Improvements

In the last five years, ODOT has invested in this 90-year-old landmark through projects that:

- Strengthened bridge framework with steel reinforcement.
- Smooth, repaired concrete on the arches to protect the steel frame (underway).

U.S. 30 NW Industrial Area Repavement Project

Crews have nearly completed work on U.S. 30 between NW Bridge and NW Kittridge Avenues resulting in:

- Repaved road in both directions.
- Replaced traffic signals.
- Built curb ramps that meet Americans with Disabilities Act (ADA) requirements.
- Improved bike travel by adjusting lane widths and adding a five-foot-wide buffered bike lane.

NW Bridge Ave Rockfall Response

In response to the January 5, 2022 emergency rockfall event, crews:

- Installed a new pinned mesh system on the hillside. (Pictures at right).

NW Industrial Area Repavement

Construction Phase

Completion 2024

We are improving safety and repaving U.S. 30 between St. Johns Bridge and NW Kittridge Avenue southeast of the St. Johns Bridge. The project installs new signals, builds ramps that meet ADA requirements and adjusts lane widths to accommodate people biking.

What to expect: Construction activities continue through December, with up to two nights of paving in summer 2024.

Willamette River Stormwater Improvement

Design Phase

Construction expected in 2026

We are designing 26 stormwater treatment facilities near three highways in Portland to protect fish, wildlife, water quality and public health. These facilities filter water runoff and reduce pollutants from entering the Willamette River using our current stormwater system.

What to expect: Project design through 2025, and construction expected in 2026.

Culvert Rehabilitation

Design Phase

Construction expected in 2025

We are designing repair work to strengthen and lengthen the life of four culverts under U.S. 30 between NW Portland and Scappoose.

What to expect: Our team is assessing the needs of each culvert and designing solutions to improve them. Construction planned for 2025.

St. Johns Bridge Repair

Construction Phase

Completion 2025

We are improving the long-term safety and lifespan of the St. Johns Bridge by repairing the concrete on the pier columns and arches under the bridge. Repairing the concrete will protect the bridge's steel internal frame and reinforcements from corrosion, maintaining the service life of this beloved historic Landmark.

What to expect: Crews continue work to repair the columns through June 2025. No impacts to vehicles.

NW Bridge Ave SE Ramp: Rockfall Mitigation Project

Construction Phase

Completion 2024

We are improving safety and preventing rockfall on NW Bridge Avenue (U.S. 30 Bypass) southwest of the St. Johns Bridge. The project removes hazardous vegetation and loose rock, and installs pinned mesh to prevent future rockfall.

What to expect: Heavy traffic is expected from January to July 2024 on U.S. 30 and U.S. 30 Bypass (N Lombard Street) with full, around-the-clock closures of the southeast ramp of NW Bridge Ave.

NW Bridge Ave NW Ramp: Preservation

Design Phase

Design expected 2024

We are preserving NW Bridge Avenue northwest of the St. Johns Bridge by strengthening the concrete supports under the bridge and restoring the road surface. These improvements will extend the service life of the structure.

What to expect: Project design is scheduled to begin in 2024.
