

New enhanced pedestrian crossings on SW Hall Boulevard

The Oregon Department of Transportation, in partnership with the City of Tigard and Washington County, are working on a project to enhance safety on Hall Boulevard (Oregon Hwy 141). This is a \$4 million project, funded by Fiscal 2023 Congressionally Directed Spending.

SW Hall Boulevard is a busy, 30 mile-per-hour corridor and people walk over ¼ mile out of direction to the nearest signalized intersection. This project will install two new enhanced pedestrian crossings, or Rectangular Rapid Flashing Beacons, across SW Hall Boulevard at the intersections of SW Hemlock Street in unincorporated Washington County and SW Spruce Street within the City of Tigard. Additional related work at both of the new crossings includes constructing new sidewalk, new lighting and improving sidewalk curb ramps to meet ADA requirements.

About Rectangular Rapid Flashing Beacons

Rectangular Rapid Flashing Beacons, or RRFBs, use flashing yellow lights to alert drivers that someone is crossing the street. Pedestrians activate the beacons with the press of a button. ODOT installs RRFBs at crossings with high pedestrian and vehicle traffic because they can reduce crashes by as much as 47 percent.

Improved Safety on SW Hall Boulevard

The new RRFBs at these two busy intersections will make it safer for people to cross SW Hall Boulevard and connect their neighborhoods to nearby destinations like bus stops, schools, churches, restaurants and local parks.

New sidewalk and new ADA curb ramps around the intersections will make the crossing safer and more accessible for everyone.

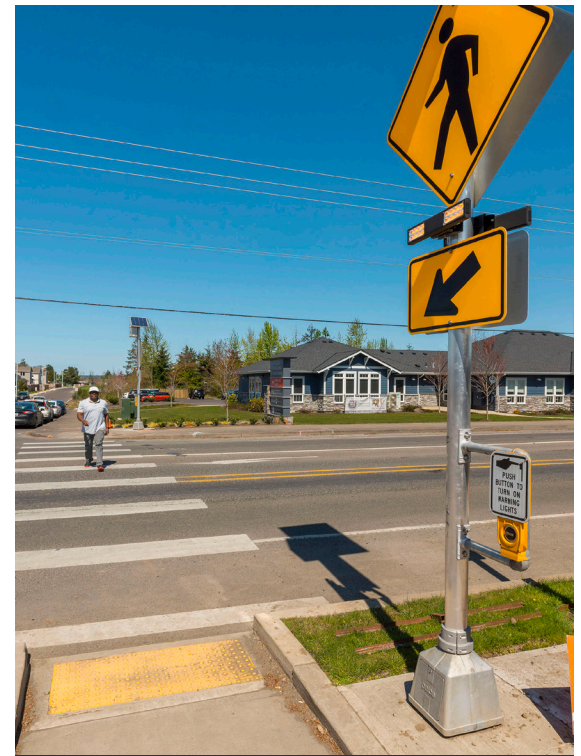

Project Schedule

The project is currently in the design phase, with construction anticipated to begin in 2025.

More details about construction, traffic impacts and work hours will be provided closer to the construction phase.

Other Projects in the Area

Additional ODOT and partner agency project investments continue along and near Hall Boulevard. Please visit the project website for a list of other projects occurring in the corridor.

Example of a completed Rectangular Rapid Flashing Beacon (RRFB) crossing, creating a safer and more visible pedestrian crossing along a busy corridor.
