We Have a Congestion Problem

People traveling in or through the Portland metro area experience impacts to their quality of life from traffic congestion on highways and local roadways. From 2015 to 2017 the average number of congested hours on the freeways increased by 13%. This costs the Portland metro region $2 million per day in time and productivity. This is valuable time where people and goods are stuck sitting in traffic. And it’s getting worse. By 2040 there will be a 35% increase in population and 1.8 million more vehicular trips per weekday traveling in or through the region.

Working on a Solution

In 2017, the Oregon Legislature passed House Bill 2017, known as “Keep Oregon Moving.” This bill committed hundreds of millions of dollars in projects that will address our congestion problem and improve the transportation system in the region and statewide. HB 2017 funded bottleneck relief highway projects, freight rail enhancements, improvements to transit, and upgrades to biking and walking facilities. The Legislature also directed the Oregon Transportation Commission (OTC) to pursue and implement tolling on I-5 and I-205. Revenue raised from tolling could be used for congestion relief.

How Will Tolls Relieve Congestion?

The use of variable rate tolls manages traffic flows and improves roadway efficiency by charging a higher price during peak traffic periods. The higher fee, encourages some drivers to consider using other travel options such as carpools or transit, or changing their travel time to other, less congested times of the day. A small reduction in the number of vehicles on a road can significantly improve travel flow.

I-205 in the Portland Metro region to help manage traffic congestion. A 2018 feasibility analysis, which included both technical analysis and public input, determined that tolling could help manage congestion and raise revenue on I-5 and I-205. Revenue raised from tolling could be used for congestion relief.

We need to explore every tool for addressing congestion and a funding strategy to support these efforts as gas tax revenue declines. Tolling is one tool.

I-5 and I-205 Tolling
Managing Congestion and Raising Revenue

Project Status
- Feasibility Analysis: Completed 2017-2018
- Planning and Outreach for Environmental Review: In progress
- Tolling Implementation: To be determined

I-205 Tolling

**Listening to the Community**

Tolling is a new concept to most Oregonians. During the 2018 feasibility analysis the feedback from the community was nearly unanimous across demographics: There is a congestion problem, it is having a negative impact on quality of life, and it is getting worse.

Discussions with the public, regional stakeholders and elected officials revealed three consistent themes with tolling:

- The need to avoid negatively impacting low-income communities
- The need for improved transit and other transportation choices
- The need to address the potential of tolling to divert traffic to local streets

ODOT is committed to continue gathering feedback from the public and will work to address these concerns throughout the next project phase.

**Prioritizing Equity and Mobility**

ODOT seeks to ensure the benefits of reduced congestion and improved mobility are shared across all demographics.

ODOT has heard concerns about the negative impacts this program could have for people with lower incomes. Many low income and vulnerable communities have been priced out of centrally located neighborhoods by high housing costs and are now living farther away from employment and services. These same individuals often have less flexibility with travel times and may not have access to other transportation options.

ODOT plans to collaborate with community partners to work toward an equitable distribution of the benefits of reduced congestion. An equity framework will guide the entirety of this project, with the goal of gaining better outcomes for traditionally disadvantaged and underserved communities.

ODOT will convene an Equity and Mobility Advisory Committee in early 2020 to aid these efforts.

**Current Status**

Building on the 2018 feasibility analysis, ODOT is moving ahead:

- **I-205**: Evaluate I-205 tolling options to raise revenue and manage congestion through variable rate tolls on I-205 at or near the Abernethy Bridge. Revenue generated by these tolls could help fund the planned widening and seismic improvements from Stafford Road to OR 213 building a third lane in each direction of I-205 and completing seismic upgrades to the Abernethy Bridge and eight other bridges. The environmental review process for I-205 tolling will begin in early 2020. Tolling could begin in 2023.

- **I-5**: Initiate additional traffic and mobility analysis for I-5 that examines start and end points for variable rate tolls with a goal of reducing congestion on about seven miles of I-5 through central Portland approximately between N Going/Alberta Street and SW Multnomah Boulevard. ODOT anticipates completing this initial analysis by 2021. The results of this analysis will inform the starting timeframe and alternatives for an environmental review.
