Welcome to OHA’s report to the Legislature on Oregon’s Health System Transformation progress for Q2 2017.

This report provides key data updates on the Oregon Health Plan population and CCOs’ progress toward the transformation of our health system.

For questions or comments about this report, or to request this publication in another format or language, please contact the Oregon Health Authority Director’s Office at:

503-947-2340 or OHA.DirectorsOffice@state.or.us
Oregon Health Plan Enrollment

Oregon Health Plan (OHP) covers services such as regular check-ups, prescriptions, mental health care, addiction treatment, and dental care.

Fee for service (FFS) OHP members who are not enrolled in a CCO or other managed care organization.

Definitions:

Oregon Health Plan (OHP) Oregonians who receive comprehensive Medicaid benefits. OHP covers services such as regular check-ups, prescriptions, mental health care, addiction treatment, and dental care.

Fee for service (FFS) OHP members who are not enrolled in a CCO or other managed care organization.

Map legend

- 14-19% 30-34%
- 20-24% 35-39%
- 25-29% 40-44%

Percent of Oregon’s population enrolled in OHP, by county.
(Q2 2017)

Total OHP enrollment: Fee-for-service (FFS) and CCO.
Oregon Health Plan Demographics

OHP and Oregon populations, by race and ethnicity

The racial and ethnic makeup of the Oregon Health Plan population differs from Oregonians overall, but has remained fairly consistent, even with the inclusion of new members following Medicaid expansion.

Enrollment by CCO. Q2 2017

Race ethnicity make up of OHP members. Q2 2017. Grey bars represent Oregon overall population.

Each race category excludes Hispanic/Latino. For example, an individual who indicates they are both White (race) and Hispanic/Latino (ethnicity) is counted as Hispanic/Latino. An individual who indicates that they are Native American (race) and non-Hispanic (ethnicity) is counted as Native American.

Oregon Overall sources: Race/ethnicity data are from the 2010 US Census. Age data (below) are from the PSU Population Research Center, 2016.

The age distribution of OHP members differs from Oregon’s overall population. Q2 2017. Grey bars represent Oregon overall population.

Detailed age distribution of OHP members. Q2 2017
CCO Performance Metrics

2017 is the fifth year of Oregon’s pay for performance program, under which the Oregon Health Authority (OHA) utilizes a “bonus quality pool” to reward coordinated care organizations (CCOs) for the quality of care provided to Medicaid members. This model increasingly rewards CCOs for outcomes, rather than utilization of services, and is one of several key health system transformation mechanisms for achieving Oregon’s vision for better health, better care, and lower costs.

Each year, OHA publishes a final report detailing calendar year performance and quality pool payouts. In addition, OHA releases a mid-year update report. This year, the Office of Health Analytics produced a “Deeper Dive” with expanded analysis of Q2 2017 data on a few measures to gain a better understanding of potential drivers of quality improvement: Adolescent well-care visits, effective contraceptive use, and emergency department utilization.

Analyzing the utilization patterns of various subgroups helps reveal patterns of quality performance not easily observed in the larger reported groups. These data may help CCOs and providers target strategies for quality improvement or other programs to help meet improvement targets.

Although well-visit rates are lower among adolescents living in rural areas, their overall health care utilization rates are the same as urban adolescents.

Effective contraceptive use (ECU) and adolescent well-care (AWC) visits by geographic region. (Ages 15-17, Q2 2017)

Top reasons for emergency department visits

Among members without mental illness diagnoses, suicide and intentional self-injury ranks #13 among reasons to visit the ED and makes up 3 percent of all ED visits.

Among members without mental illness diagnoses, suicide and intentional self-injury ranks #just #175 and makes up 0.1 percent of all ED visits.

Although having an adolescent well-visit is statistically correlated with meeting the effective contraceptive use measure at an individual level, this pattern does not hold true in the tri-county region.
Finance

The financial overview below provides highlights of operating performance on a comparative basis, including operating and total margins, and a description of the Member Services Ratio (MSR) and the Medical Loss Ratio (MLR). Details are also provided for CCO capitalization, focusing on net assets and liquidity. A critical factor for CCO success is the development of capitated rates paid for health services. OHA and Optumas, an outside actuarial firm, collaboratively work with the CCOs through the rates workgroup on the development of actuarially sound capitated rates.

Operating performance

OHA tracks two key metrics each quarter: the CCOs’ operating margin and total margin (which includes the impact of non-operating income and expenses as well as income taxes). Operating margin is calculated by dividing operating income by total net operating revenue, resulting in a percentage.

On a statewide basis, CCO operating margins have been trending downward from their peak in 2014. Much of the increase in margins during 2014 was the result of cost and utilization assumptions used to develop the rates for the Medicaid expansion population. By 2015, OHA had adequate emerging experience (claims information) to begin to quantify the true underlying cost of the expansion population. The rates were appropriately aligned with this data and generally lowered to reflect the costs and risks of the CCOs’ members.

For the first six months of 2017, statewide, CCO operating margin and total margin were 1.3% and 1.1%, respectively, as compared to 1.7% and 0.9% in 2016. Statewide operating and total margins for the first six months of 2017 and the calendar year 2016 are in line with the current rate development methodology.

Below is a table that displays each CCO’s operating margin and total margins:

*Trillium’s non-operating income and expenses as well as income taxes are included in total on this exhibit.
CCO member services ratio (MSR) is a key financial metric that calculates the costs of services a CCO provided to its members (both medical and non-medical such as flexible services) as a percentage of total revenue. Member service expenditures are reported to OHA on the CCOs’ financial statements, submitted on a quarterly basis. Closely correlated to the MSR is the medical loss ratio (MLR), which is a term used within the insurance industry and by the Centers for Medicare & Medicaid Services (CMS). The MLR is calculated using the MSR as the starting point and then allows certain defined administrative services to be included in the calculation, such as health care quality improvement expenses, and starting in 2017, fraud prevention expenses. Under new CMS Rules for Medicaid managed care organizations, all CCOs must meet a minimum MLR of 85 percent in 2018. Oregon first adopted a minimum MLR requirement in 2014 with Medicaid expansion and has developed a phased approach to achieve all of the CMS requirements for MLR in 2018.

OHA completed CCO MLR reporting requirement for the calendar year ending December 31, 2016 and for the 18-months period ending December 31, 2015. For the 18-month period ending December 31, 2015, five CCOs did not meet the required MLR threshold and as a result rebated back to OHA $29.6 million. Since the MLR requirement was for the expansion population only (funded entirely by CMS) all rebates were returned to CMS.

For the calendar year ending December 31, 2016, one CCO did not meet the required MLR threshold of 80% on the expansion population. A related rebate payable due to OHA of $1.2 million is expected to be settled in 2018 and to be returned to CMS. The graphs below display each CCO’s MSR for the first six months of 2017 and calendar years 2016 and 2015:

CCOs are paid monthly capitation payments, commonly referred to as per member per month (PMPM) payments, to manage and deliver health care for their membership. CCOs have flexibility in allocating the capitation revenues, determining how best to provide, purchase and coordinate their members care.

The increased membership resulting from expansion led to an increase in both the net asset and restricted reserve requirements. CCOs are currently required to maintain a net asset level of five percent of their average annual revenue (a rolling average of the past four quarters’ adjusted revenue) as a minimum amount of operating capital. They are also required to maintain a restricted reserve account held in OHA’s name as a safeguard against unanticipated losses.

See the graphs on the next page for CCOs’ net assets in total compared to their required net assets. This is also reported by member, which allows for normalization between large and small CCOs.

The increase in CCO membership and the higher margins during 2014 also contributed to an increase in their cash and investments. The graph at left reflects each CCO’s cash and investments at the end of each of June 2017, December 2016 and December 2015, respectively.

Complaint and Grievance Reporting

Oregon’s 1115 Demonstration Waiver requires reporting on six categories of complaints and grievances: Access to Providers and Services, Interaction with Provider of Plan, Consumer Rights, Clinical Care, Quality of Services, and Client Billing Issues.

Most complaints during Q2 2017 were about access to care or interaction with provider.

Complaints varied by CCO*
(per 1,000 members, Q2 2017)

Complaint and grievance information is reported individually by each CCO; complaints and grievances received directly by OHA from Open Card OHP members are tracked separately by OHA. Appeals of coverage denials, or Notices of Action (NOAs) are also captured and reported separately from complaint and grievance information. Summaries of complaint, grievance, appeal trends and interventions are included in the OHP Section 1115 Quarterly Report.

*CCOs define what constitutes a complaint or grievance and choose when and how to report complaints and grievances to the Authority. Because the definition of complaints or grievances is not standard across CCOs, comparison across CCOs should be made with caution.
Patient-Centered Primary Care Homes

The adoption of Patient-Centered Primary Care Homes (PCPCHs) is integral to transforming the health system, with their patient- and family-centered approach to all aspects of care, wellness, and prevention.

In January of 2017, the Patient-Centered Primary Care Home (PCPCH) Program launched 5 STAR recognition. The 5 STAR designation distinguishes clinics that have implemented truly transformative processes into their workflows using the PCPCH model framework and recommended best practices. As of June 2017, there were 34 5 STAR clinics in the state. These 5 STAR clinics include federally qualified health centers, school-based health centers, rural health centers, behavioral health clinics, pediatric clinics and other clinic types located in 17 different counties in Oregon.

Appendix B: CCO Profile

Although all of Oregon’s 16 CCOs are community based in terms of local governance, there is a wide variety of legal and corporate structures under which they exist. All of the CCOs generally fit into one of the following corporate structures:

- Taxable Publicly Traded Corporation
- Taxable Private Corporation
- Tax-exempt Charitable Organization – 501(c)(3)
- Tax-exempt Non-Charitable Organization – 501(c)(4)
- Limited Liability Corporation – LLC

The table below describes the corporate structure of each CCO:
