

Oregon Acute Care Hospitals

Financial and Utilization Trends

2nd Quarter 2016

Oregon Health Authority
Office of Health Analytics

ABOUT THIS REPORT

Hospitals play an important role in the health care system, both as institutions that provide medical, surgical, and nursing care around the clock, and also as employers, research institutions, and centers to train the health care workforce. According to Centers for Medicare and Medicaid Services reporting, hospital care accounts for over 30% of all health care spending every year. As Oregon continues its large scale health care transformation efforts, tracking costs and utilization of hospitals is an important part of monitoring the impact of these efforts.

This report monitors and compares financial and utilization information for Oregon's acute care inpatient hospitals. Nine quarters of data are presented. The report compares the most recent quarter's data with like quarters from previous years. As hospital trends are affected by seasonal variations, more attention should be placed on longer term trends rather than quarter to quarter variation.

The data source for this report is Databank. Databank is a database of self-reported financial and utilization information. Hospitals submit Databank data to the Oregon Health Authority on a quarterly basis. As Databank data are self-reported, they are not audited. This report is not intended as a substitute for audited financial statements.

Kaiser hospitals do not report financial data to Databank, but they do submit utilization data. They are included in utilization reports. Kaiser Westside opened for business in August of 2013, and Shriners' Children Hospital moved to DRG status in the beginning of 2013. These facilities may not have past year data available for comparison. There have not been any hospital closures in recent years.

New for the 2016 quarterly updates of this report is the inclusion of operating expenses for hospitals. Payer mix is no longer included as a component of this report.

Types of Hospitals

In this report, hospital data is presented in four categories: All hospitals, DRG hospitals, Type A hospitals and Type B hospitals.

There are 60 acute care inpatient hospitals in Oregon. These are general care facilities and exclude federal hospitals, long term care and rehabilitation facilities.

There are 28 DRG hospitals in Oregon. These are typically large, urban hospitals that receive payments based on the prospective Diagnostic Related Group (DRG) system.

There are 12 Type A hospitals in Oregon. These hospitals are small - fewer than 50 beds - and are located more than 30 miles from another hospital.

There 20 Type B hospitals in Oregon. These hospitals are small - fewer than 50 beds - and are located within 30 miles of another hospital.

A complete list of all hospitals and their individual performances can be found in the Appendix.

Executive Summary

The second quarter of 2016 showed growth in hospital profitability when compared with the second quarter of 2015. Median operating margins remained flat year over year while median total margins grew in the second quarter of 2016. Both operating and total margins have shown year to date growth through the first two quarters of 2016 when compared to the first two quarters of 2015. Uncompensated care as a percent of gross patient revenue has remained flat year over year. Emergency department visit growth has slowed, showing growth of only 0.5% when compared to the second quarter of 2015, a significant reduction from the 6.3% growth between the second quarters of 2014 and 2015.

1 Year to date median total margin increased 0.2 percentage points in the second quarter of 2016 when compared with the second quarter of 2015.

Year to Date Median Total Margin
increased 0.2 pp

2 Charity care as a percent of gross patient revenue was down slightly compared with the second quarter of 2015.

Charity Care was **1.1%** of gross patient revenue in Q2 2016.

3 Oregon inpatient hospital discharges fell 1.2% in the second quarter of 2016 when compared with the second quarter of 2015.

Inpatient Discharges
fell 1.2%

4 Emergency department visits increased 0.5% in the second quarter of 2016 when compared with the second quarter of 2015.

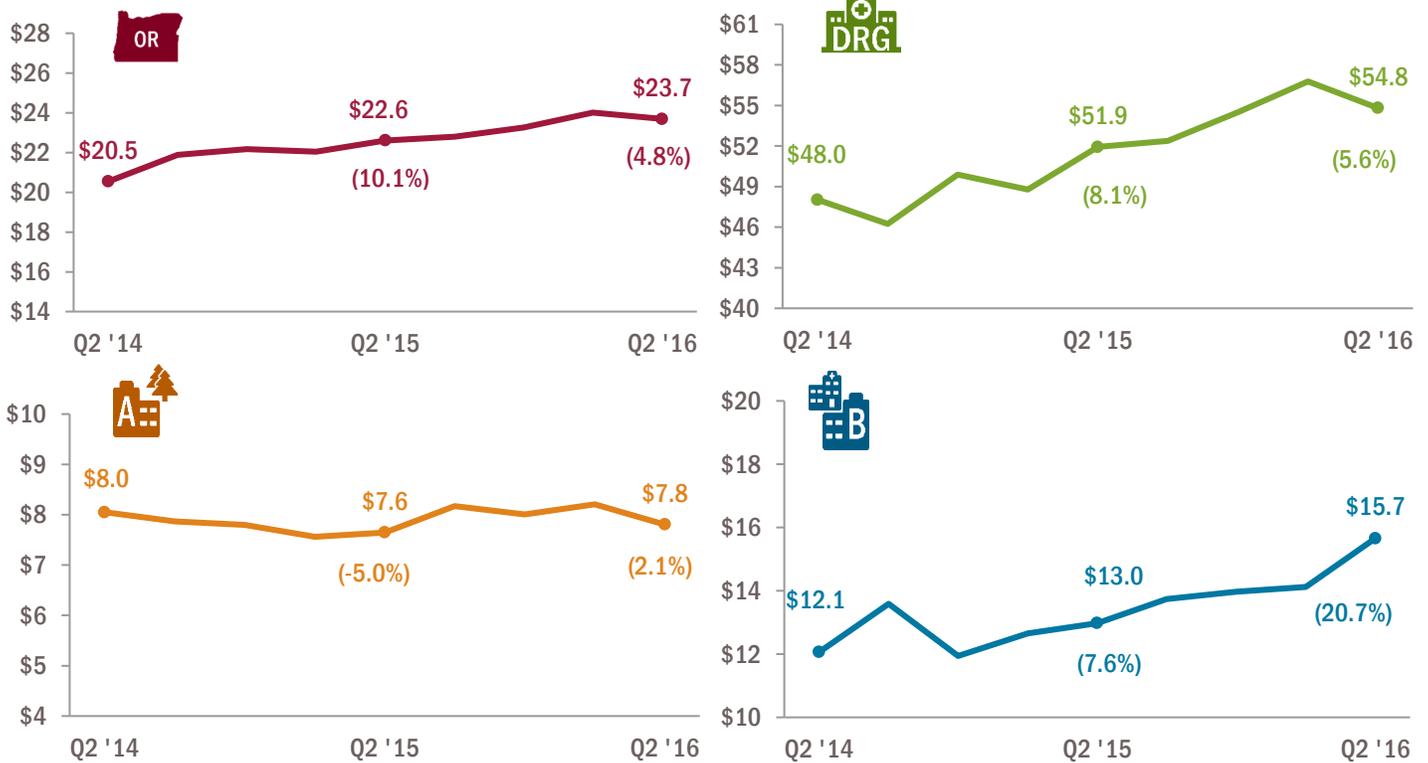

Emergency Room Visits **+0.5%** increased to 364,236 total visits in Q2 2016

NET PATIENT REVENUE

In the second quarter of 2016, statewide median net patient revenue was 5% higher than in the second quarter of 2015. DRG and Type A hospitals had lower median net patient revenue compared to the first quarter of 2016, but remained higher than the previous second quarter period. Type B hospitals showed the most growth, increasing 21% when compared to the second quarter of 2015.

Statewide median net patient revenue grew 5% compared to Q2 2015.

Median net patient revenue in millions

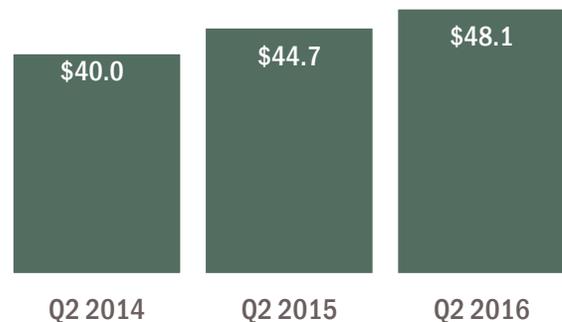

Net Patient Revenue is the amount a hospital expects to receive for services after accounting for contractual allowances to third party payers and for uncompensated care. This includes payments made for providing health care, such as surgeries, emergency services, lab tests, imaging, etc.

Net patient revenue is calculated by taking the total amount of money billed for patient care (gross patient revenue) and subtracting uncompensated care and contractual amounts.

Year to date median net patient revenue.

year to date median net patient revenue in millions

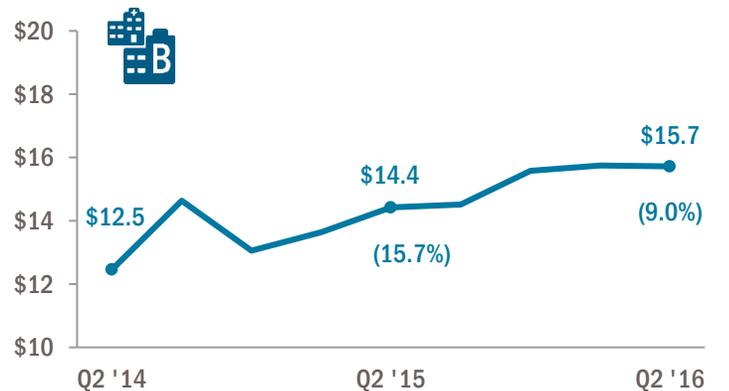

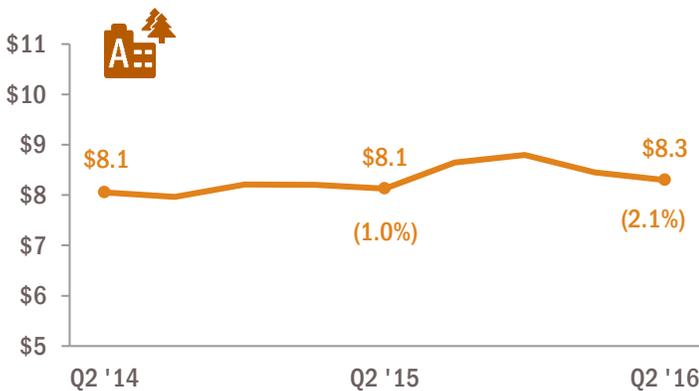

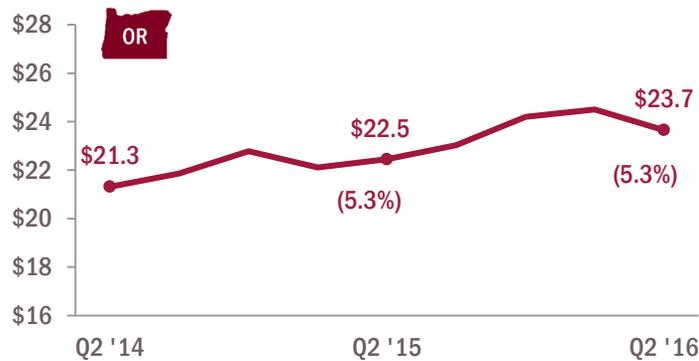

OPERATING EXPENSE

In the second quarter of 2016, statewide median operating expenses grew 5% when compared with the second quarter of 2015. DRG and Type A hospitals saw reductions in median operating expenses when compared with the first quarter of 2016, but remained above the previous second quarter period. Type B hospitals had the greatest gains in median operating expenses, increasing 9% when compared to the second quarter of 2015.

Statewide median operating expense grew 5% when compared with Q2 2015.

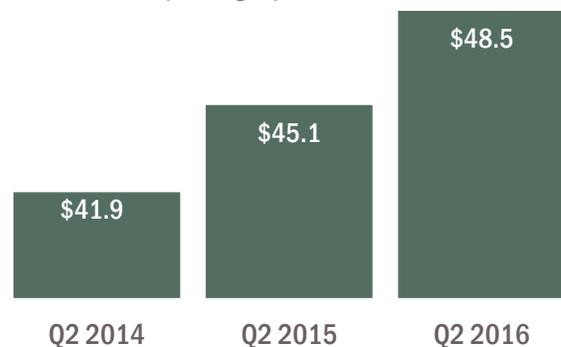

Median net operating expense in millions

Operating Expense is the sum of all expenses incurred for the purpose of operating a hospital. These include salary and benefit expenses, medical and office supplies, facility and depreciation costs. Expenses are accounted on an accrual basis, meaning it is recorded as the expense occurs, not when the expense is actually paid.

Year to date median operating expense.

year to date median operating expense in millions

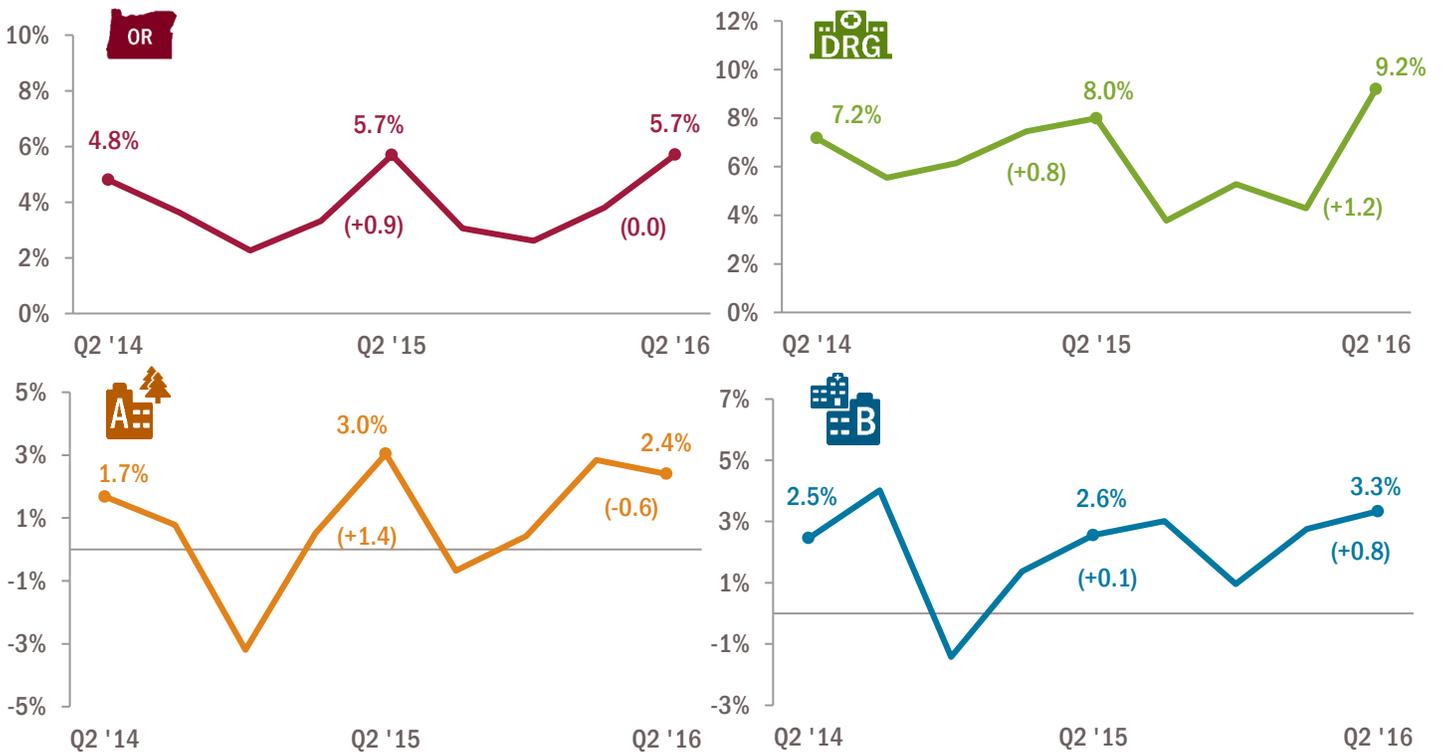

OPERATING MARGIN

In the second quarter of 2016, statewide median operating margins were flat when compared with the second quarter of 2015. DRG and Type B hospitals increased median operating margins when compared with the second quarter of 2015. In the second quarter of 2016, DRG hospitals had the highest quarterly median operating margin of any quarter in the previous two years.

Statewide median operating margin was flat when compared with Q2 2015.

Median operating margin percent

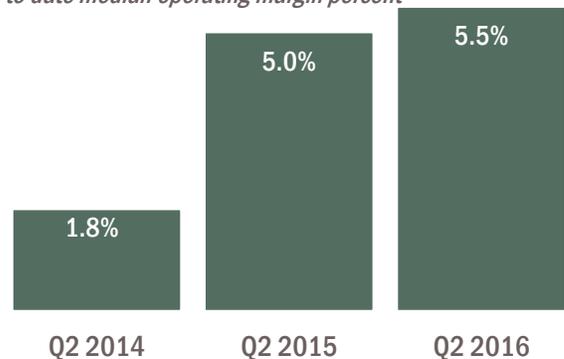

Operating Margin is calculated as a ratio of operating revenue minus operating expenses divided by operating revenue. Operating revenue includes net patient revenue as well as revenue from other non-patient hospital services, such as cafeteria sales. Operating expenses are the expenses associated with running a hospital, such as supplies, salaries, rentals, professional fees, and insurance.

A positive operating margin means that the hospital is making a profit, while a negative margin means the hospital is operating at a loss.

Year to date median operating margin.

year to date median operating margin percent

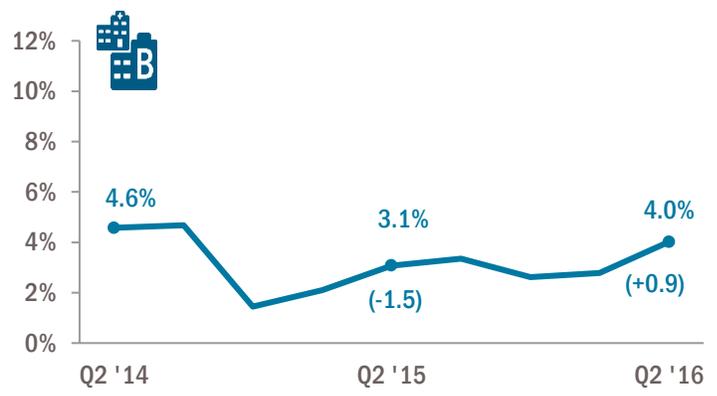

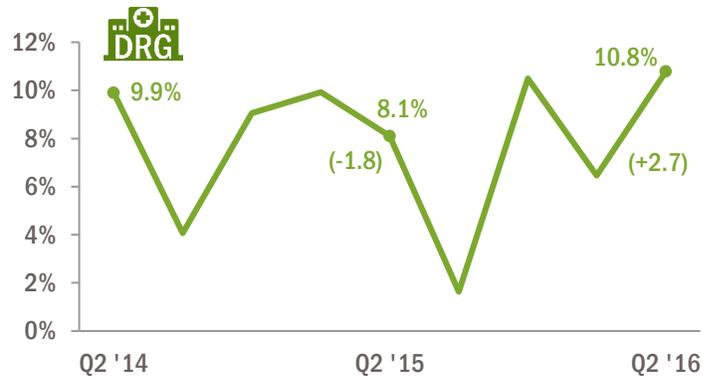

TOTAL MARGIN

In the second quarter of 2016, statewide median total margin increased 0.2 percentage points when compared with the second quarter of 2015. DRG hospitals had the most growth in total margins, increasing by 2.7 percentage points when compared to the second quarter of 2015. Type A hospitals were flat and Type B hospitals increased 0.9 percentage points in the same time period. Total margins historically display more volatility than operating margins for DRG hospitals due to fluctuations with investment gains and losses.

Statewide median total margin grew when compared with Q2 2015.

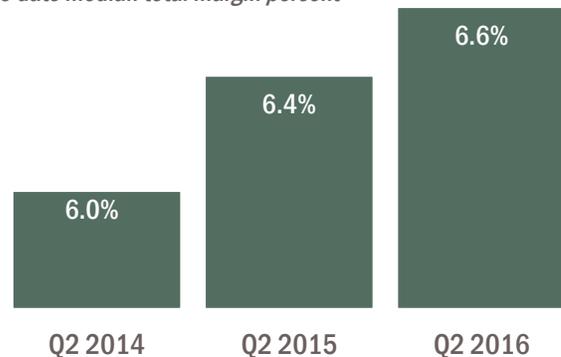

Median total margin percent

Total Margin compares revenue and expenses from all sources, including investments, tax subsidies, and operations. It is calculated by dividing all sources of income by all expenses. The total margin includes revenue from sources not related to patient care or hospital operation. Because of this, a hospital with a negative operating margin could still have a positive total margin and be overall profitable despite its hospital services operating at a loss.

Year to date median total margin.

year to date median total margin percent

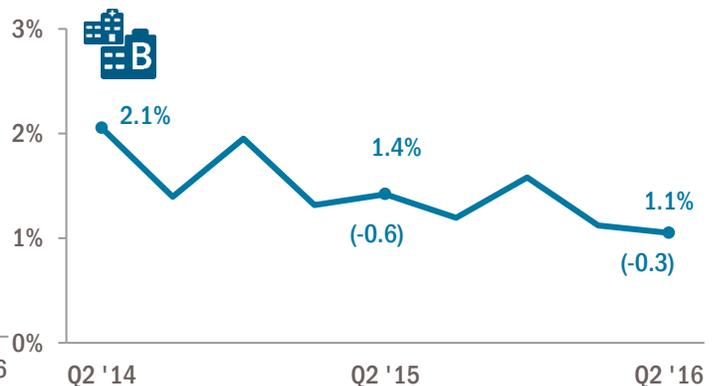

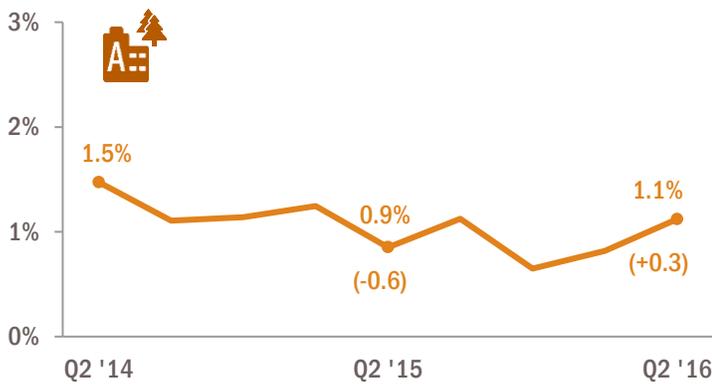

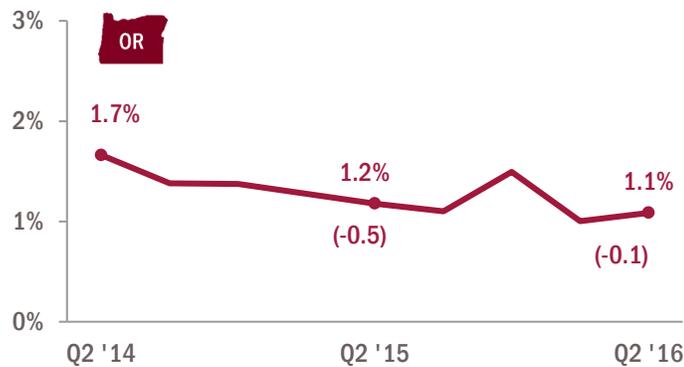

CHARITY CARE

In the second quarter of 2016, statewide median charity care as a percent of gross patient revenue decreased 0.1 percentage points when compared with the second quarter of 2015. Charity care appears to have stabilized at about one percent of gross patient revenue. The spike in the trend line shown in the 4th quarter of 2015 was due to corrections made by Providence hospitals to their charity care charge amounts. Total charges to charity care are up year over year due to yearly increases in gross charges.

Statewide median charity care decreased when compared with Q2 2015.

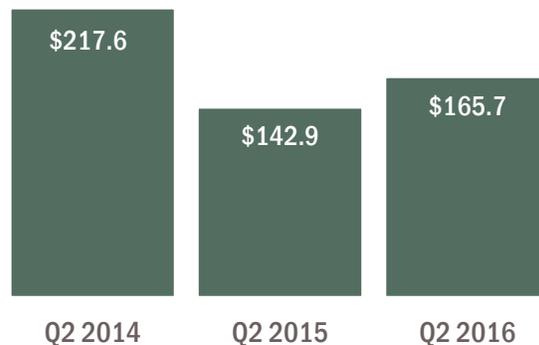

Median charity care as a percent of gross patient revenue

Charity Care includes services that are provided for free or at a reduced cost to eligible patients. Each hospital or health system determines its own criteria for providing charity care based on factors such as income, employment status, or alternative sources of funds. The value of charity care is based on a hospital's full established charges and may be equal to the full charge or any portion of it the hospital elects to provide for free.

Year to date total charity care charges.

year to date charity care in millions

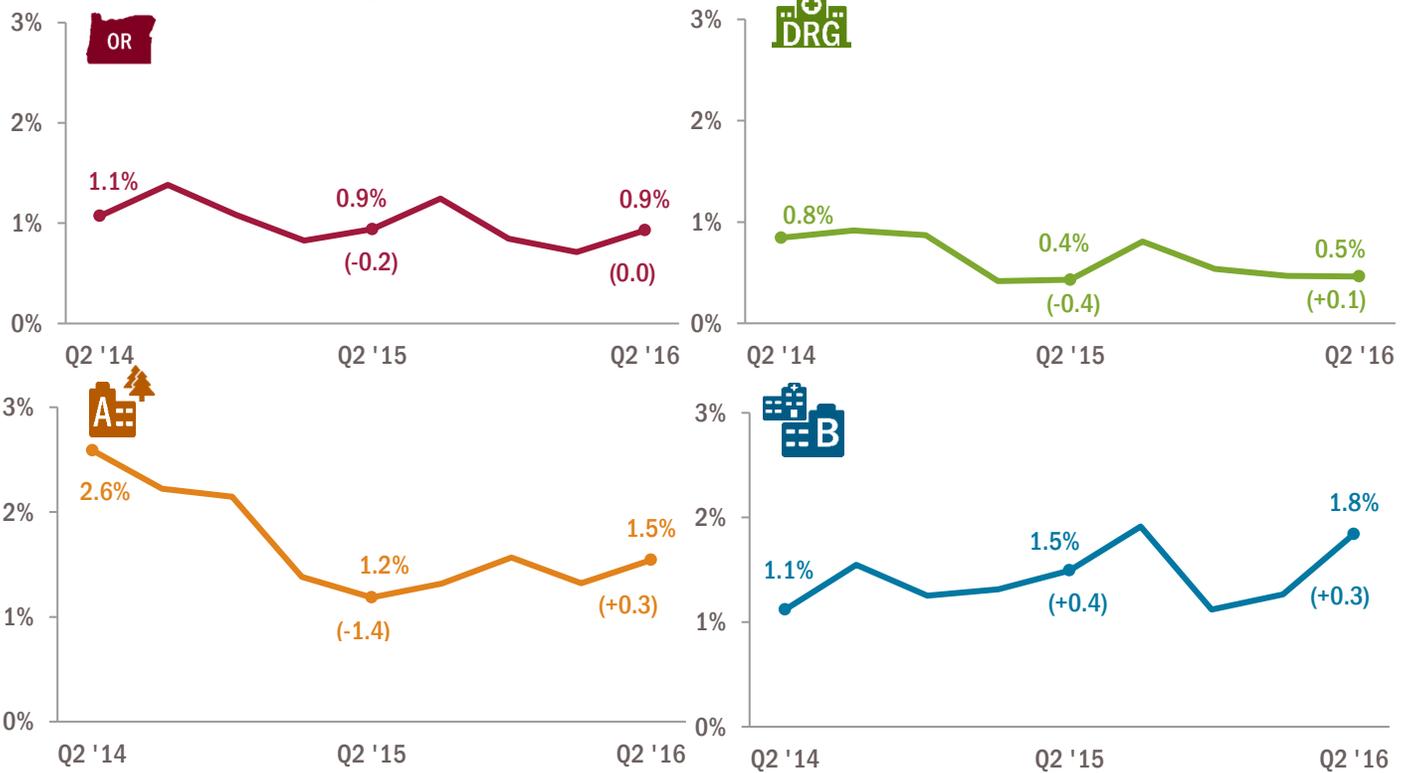

BAD DEBT

In the second quarter of 2016, statewide median bad debt as a percent of gross patient revenue was flat when compared with the second quarter of 2015. Total year to date bad debt charges grew by \$9.1 million in the first two quarters of 2016 to a total of \$82.3 million. The statewide median percent of bad debt held flat while individual hospital types posted growth in bad debt due to overall increases in gross charges.

Statewide median bad debt was flat when compared with Q2 2015.

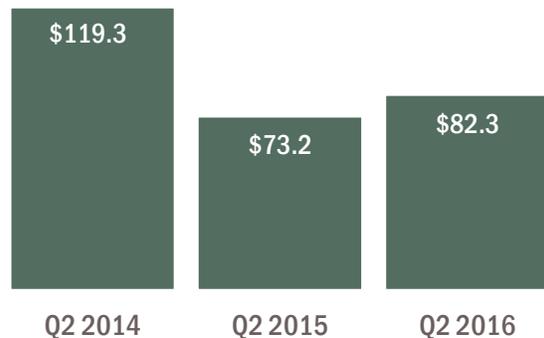

Median bad debt as a percent of gross patient revenue

Bad Debt occurs when patients do not pay all or part of their bill for services. It is an unpaid bill for care, based on a hospital's full established charges, for which a hospital expects payment but is unable to collect. Bad debt can include unpaid components of the total bill such as co-payments and co-insurance. Like charity care, bad debt is expressed as a percent of gross patient revenue.

Year to date total bad debt charges .

year to date bad debt in millions

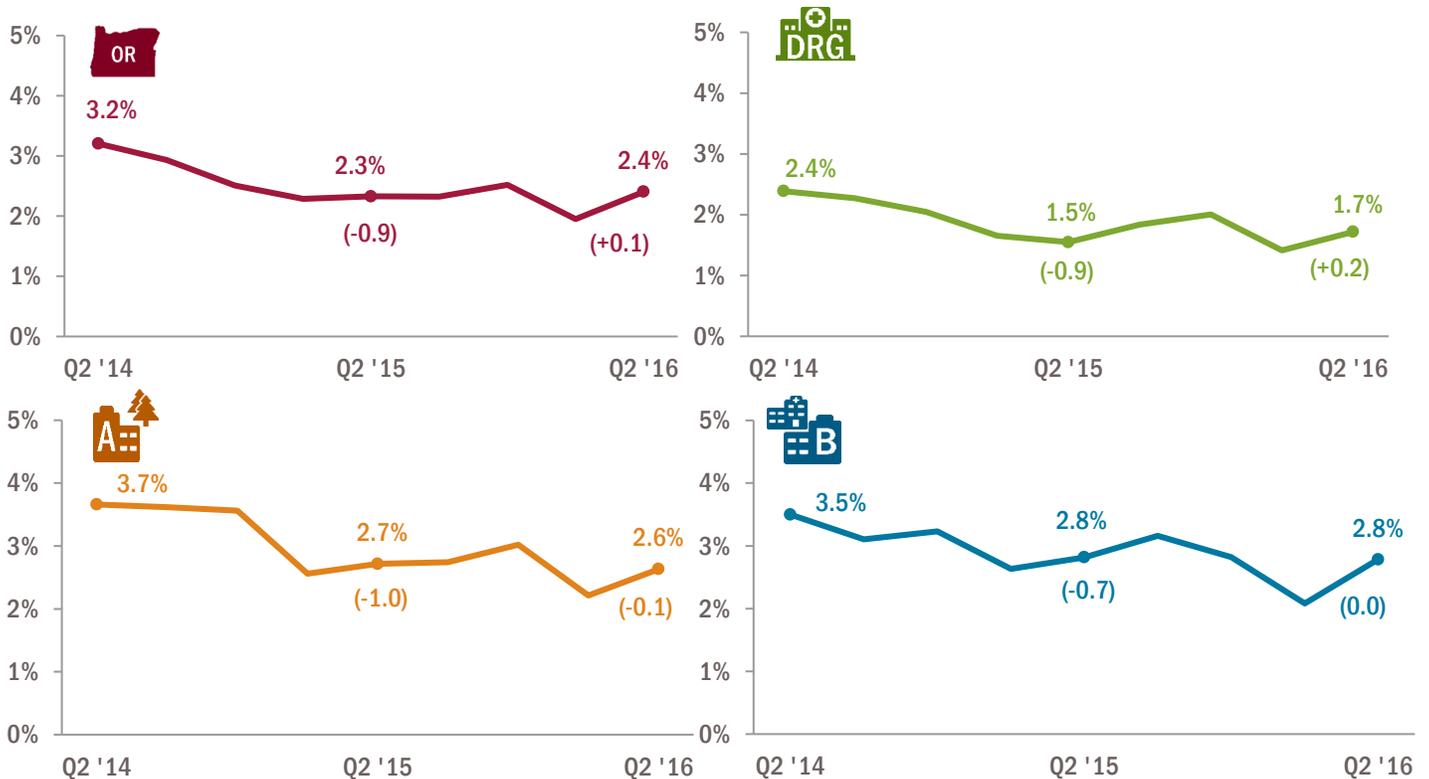

UNCOMPENSATED CARE

In the second quarter of 2016, statewide median uncompensated care as a percent of gross patient revenue increased by 0.1 percentage points when compared with the second quarter of 2015. Total year to date uncompensated care charges increased to \$248 million in the second quarter of 2016. Uncompensated care as a percent of gross patient revenue remains low while total charges have increased due to year over year increases in gross charges.

Statewide uncompensated care increased when compared with Q2 2015.

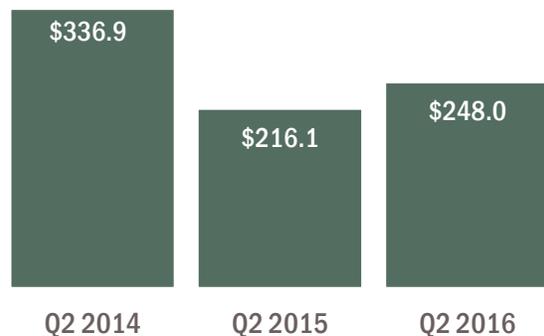

Median uncompensated care as a percent of gross patient revenue

Uncompensated Care is the total of charity care and bad debt charges. It measures the total value of care, based on established charges, that a hospital provides without receiving payment. Because it represents care provided without reimbursement, uncompensated care can directly affect revenue and margin numbers.

Year to date total uncompensated care charges.

year to date uncompensated care in millions

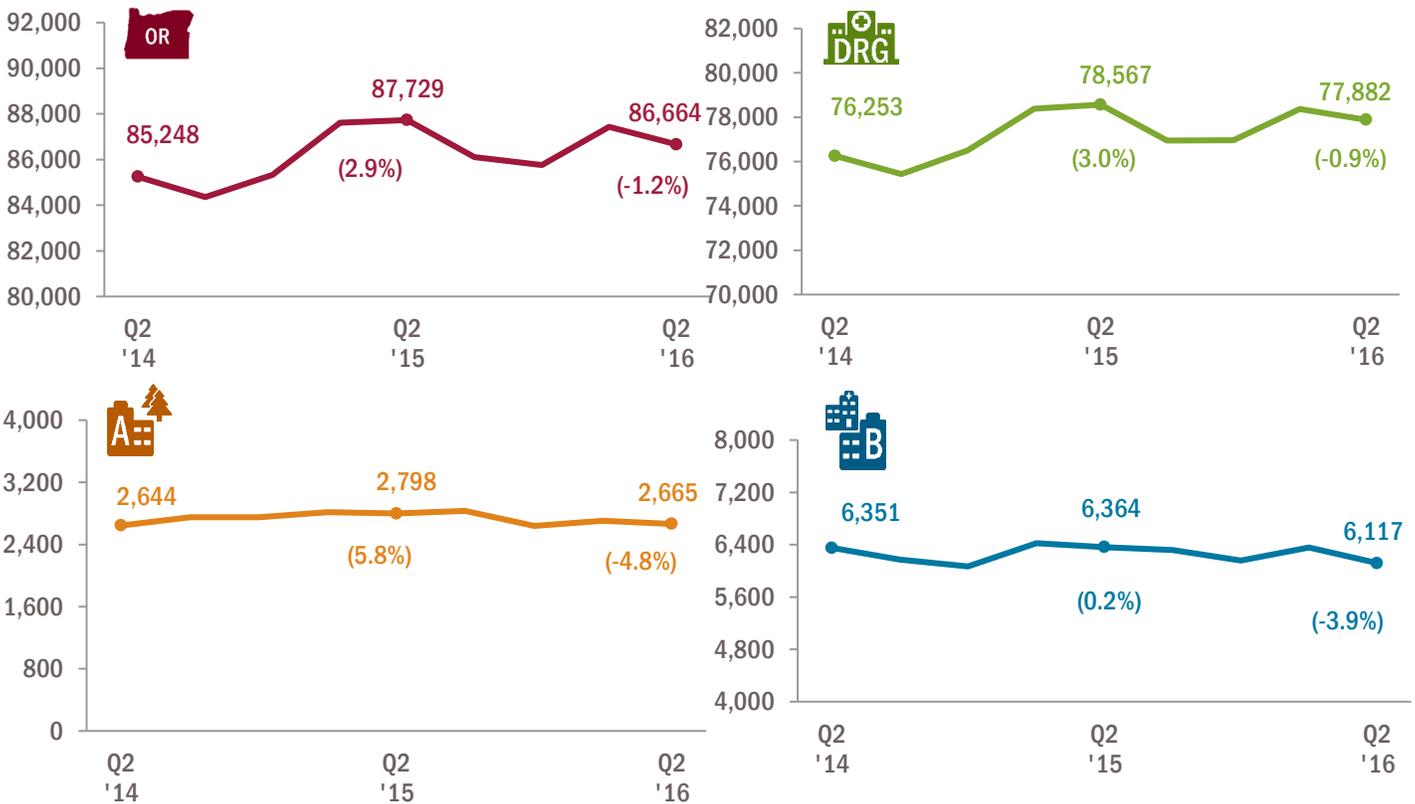

INPATIENT DISCHARGES

In the second quarter of 2016, statewide inpatient discharges were 1% lower than the second quarter of 2015. All hospital types experienced decreases in inpatient discharges.

Statewide inpatient discharges fell 1% when compared to Q2 2015.

count of quarterly inpatient discharges

Inpatient discharge occurs when a patient is formally released from the hospital after being admitted and lodged for at least 24 hours. This report represents Inpatient Discharges as a count of hospitalizations. It is not a count of unique individuals, however, as a single person can be admitted to the hospital multiple times in a year.

Inpatient discharges are acute care only and do not count rehabilitation, long term care or specialized psychiatric care.

Year to date total inpatient discharges.

year to date inpatient discharges

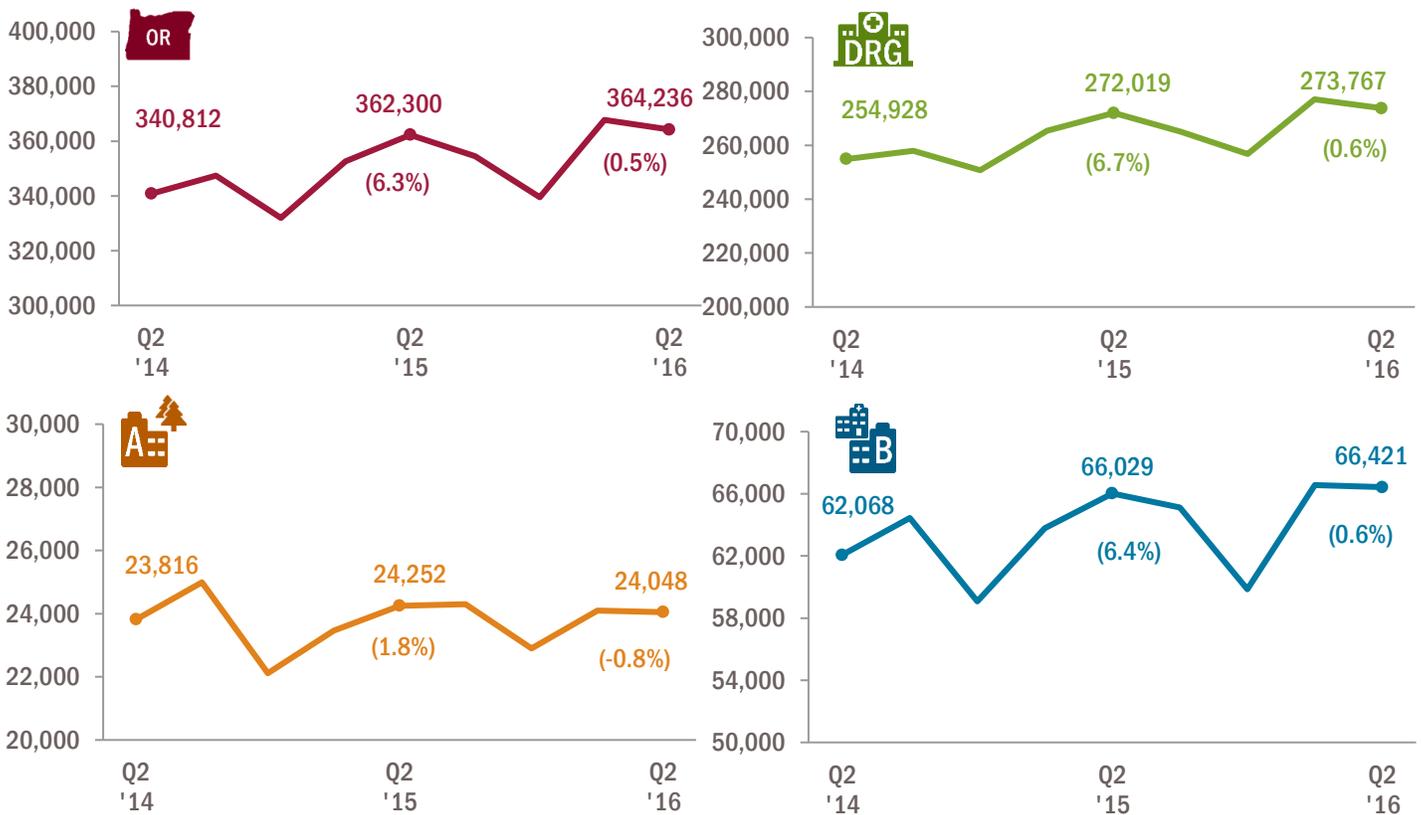

EMERGENCY DEPARTMENT VISITS

In the second quarter of 2016, statewide emergency department visits increased 0.5% when compared to the second quarter of 2015. This rate of growth is much lower than previous second quarter results. Emergency department visits grew 6% in the second quarter of 2015 when compared with the second quarter of 2014 and 9% in the second quarter of 2014 when compared with the second quarter of 2013.

Statewide ED visits grew 0.5% when compared with Q2 2015.

count of quarterly ED visits

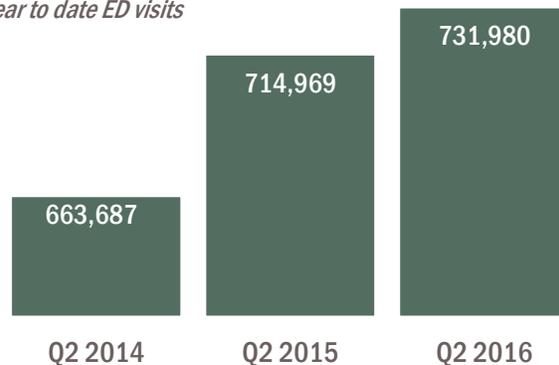

Emergency Department Visits are reported as the number of visits to a hospital emergency department that do not result in a hospital admission. A person that visits the emergency department and is then admitted is counted as an inpatient discharge.

This report focuses on the count of ED visits, but cannot provide information about the rate of ED use - i.e. how frequently individuals in a given population visit the ED.

Year to date emergency department visits.

year to date ED visits

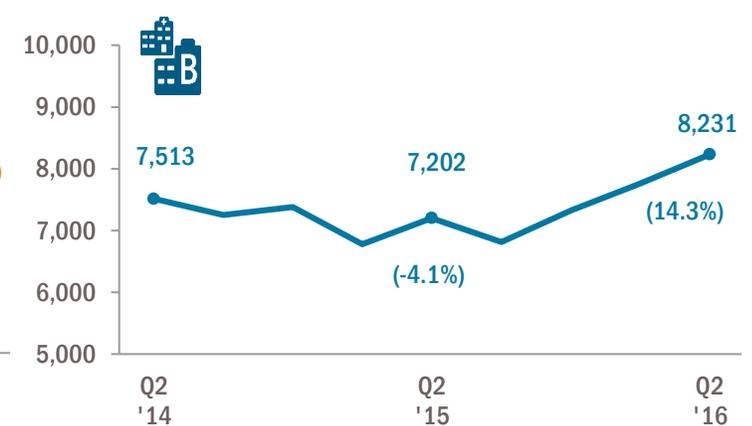

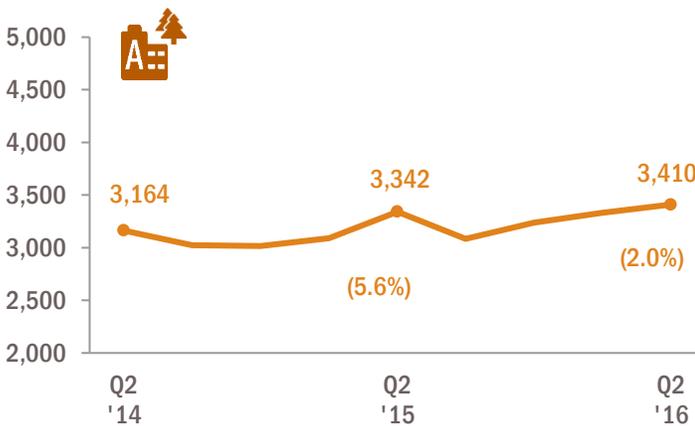

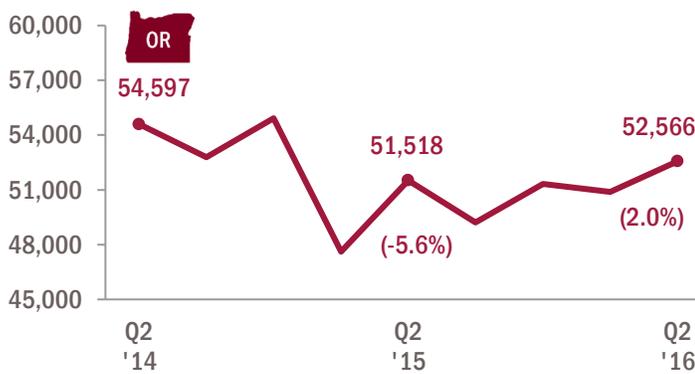

OUTPATIENT SURGERIES

In the second quarter of 2016, statewide outpatient surgeries increased 2% when compared with the second quarter of 2015. DRG hospitals remained essentially flat, while Type A hospitals grew 2% and Type B hospitals grew 14% when compared to the second quarter of 2015. Outpatient surgery numbers appear to have stabilized after experiencing volatility in the first year of the Affordable Care Act implementation.

Statewide outpatient surgeries grew 2% when compared with Q2 2015.

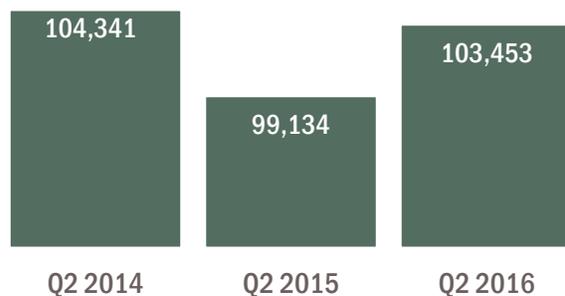

count of quarterly outpatient surgeries

Outpatient Surgeries include surgeries performed at the hospital that do not require an overnight stay. These discharges consist primarily of non-emergency, planned services in which the patient is treated and released in the same day. Outpatient surgery numbers do not include standard lab work, clinic visits or most diagnostic imaging work.

Year to date outpatient surgeries.

year to date outpatient surgeries

APPENDIX

The following appendix pages contain individual hospital results for the measures included in this report. Data are provided as year to date results through the first two quarters for the past five years, from 2012 to 2016.

Kaiser hospitals are not included in financial measures, as Kaiser does not submit financial data for individual hospitals. Some information is not available for Kaiser Westside (as it recently opened), and for Shriners' Children's Hospital (as it recently became a DRG hospital).

As previously described, hospitals in Oregon are divided into three categories based on size and distance to other hospitals. In addition to these categories, designation as either a health district hospital or a critical access hospital can also impact financial and utilization outcomes.

A **health district hospital** is a one that is under the control of a formal health district. In most cases the controlling entity is the local county government. Being a part of a health district allows the hospitals access to additional funds from tax sources to contribute to operations. This access to tax funding allows many hospitals to continue to operate in rural areas when they otherwise could not afford to. Health districts may also provide funding to other types of clinics and providers.

A **critical access hospital** is designated by the Centers for Medicare & Medicaid Services (CMS). This designation impacts the reimbursement the hospital receives from Medicare. There are a number of specific criteria a hospital must meet to be considered a critical access hospital, but in general a hospital must be located in a rural area with limited access to other hospitals. In exchange for providing additional services that the hospital might not otherwise provide due to the cost, Medicare will reimburse the hospital at a higher rate than other hospitals receive for the same services. These services mostly relate to expanded emergency services such as a 24 hour emergency room and ambulance transportation.

In the following pages health district hospitals are indicated with an asterisk (*), critical access hospitals are indicated with the Greek letter Phi(Φ), and for profit hospitals are indicated with a superscript 'p'(^p).
