Sustainable rate of growth

Bending the cost curve is a vital component of the coordinated care model— and one that strengthens all other principles. Preventing a cost shift to employers, individuals, and families, and reducing inappropriate use and costs through a fixed-rate-of-growth approach is the foundation to health care transformation.

Achieving a sustainable rate of growth results from:

- Population-based contracts that include risk-adjusted annual increases in the total cost of care for services reimbursed.
- Provider contracts that include provisions that agree on rates and quality incentive payments for each contract year.
