The Honorable Tina Kotek

Governor of Oregon
900 Court Street NE, Suite 254
Salem, OR 97301

Dear Governor Kotek,

I am writing to express my strong support for the Oregon National Primate Research Center (ONPRC) and to urge you to reject misinformation that threatens this critical research institution.

Recently, false claims by groups like the Physicians Committee for Responsible Medicine (PCRM) have distorted the reality of ONPRC's work and its commitment to both scientific progress and animal welfare. These attacks not only misrepresent the facts but also endanger the future of medical innovation, public health, and compassionate animal care.

Setting the Record Straight: Why ONPRC must remain open

False Claim #1: ONPRC mistreats animals.

Fact: ONPRC upholds the highest animal welfare standards, exceeding the requirements of the Animal Welfare Act and USDA oversight. Animal research is often misunderstood, but the reality is simple: this work is a mission of love—for people and animals alike. Researchers, veterinarians, and animal care teams dedicate their lives to advancing medicine, ensuring the highest ethical standards, and protecting both human and animal health.

Veterinary technicians and animal care teams form deep bonds with the animals they work with, providing them with enrichment, comfort, and the best possible care. Veterinarians and animal care professionals at ONPRC provide around-the-clock care, enrichment, and medical attention, ensuring that all animals receive humane and ethical treatment.

My mother is a vet tech and I have yet to meet a vet, vet tech, or animal care team who doesn't love animals. Vets have told me personally that they prefer working in animal research to private practice because animals in research are so much better taken care of than many, many pets.

False Claim #2: Primate research is outdated and unnecessary.

Fact: While scientific advancements have introduced alternative models, no technology fully replicates the complexity of a living system. Primate research remains critical for studying conditions such as Alzheimer's, Parkinson's, infectious diseases, and reproductive health—areas where animal-free methods cannot yet provide complete answers.

The public demands new medicines, vaccines, and therapies—but those advancements do not happen without ethical research, including necessary animal studies.

We live in a world of scientific reality, where new treatments and cures require rigorous study before they are safe for people or animals.

False Claim #3: ONPRC research is wasteful and doesn't benefit human health.

Fact: ONPRC has contributed to breakthrough medical discoveries that have improved and saved millions of lives.

For example: • Vaccines & Infectious Disease Research – ONPRC studies were key to the development of COVID-19, Zika, and HIV treatments.

- Neurological Disorders – ONPRC research has advanced treatments for – ONPRC research has advanced treatments for multiple sclerosis, Alzheimer's, and Parkinson's disease.

- Cancer Therapies – Studies at ONPRC have led to new cancer drugs and improved radiation therapies.

Why This Matters—For Oregon and Beyond. ONPRC is not just an Oregon institution—it is a national leader in biomedical research, driving medical innovation across the country.

Restricting or closing ONPRC would mean:

- A loss of life-saving research that directly impacts millions of patients.
- A blow to Oregon's economy—ONPRC supports thousands of jobs and generates millions in federal research funding.
- A shift of research to countries with weaker animal welfare regulations, rather than maintaining strong ethical oversight in the U.S.

My Personal Experience with Animal Research and Exceptional Animal Care

Both of my parents have worked for OHSU for a collective of 48 years. I see how they go into work everyday ready to take care of these animals. They really care for them and treat them so well. My whole life I have known what they do to help people. I am a twin so as most twins we were born almost 2 months early and premature if OHSU didn't do the research they do my sister and I and many other premature children would not be alive today. I owe my life to the research that OHSU does. My parents work really hard to take care of their monkeys. I have seen it everyday. They also do Parkinson's research and my grandfather has Parkinson's disease. He has had it since I can remember. He is a very strong man. Recently he has gone more downhill and that is very scary but from OHSU and their research he has gotten new trials. Without this constant research I don't think he would still be here. My family has much to be thankful for because of OHSU and what they do. I know that they will keep saving lives.

Governor Kotek, I urge you to stand with science, ethics, and progress. Please publicly support ONPRC and reject the misleading attacks that threaten both Oregon's research leadership and the future of medical innovation.

Thank you for your time and consideration. I appreciate your commitment to facts, animal welfare and compassion, and Oregon's place as a leader in medical innovation.

Sincerely,
Rori Hodge
