* Organizations with no listed strategies had a new CHIP planned for completion shortly after March 2021. This matrix will be updated with those strategies in future versions.

** Concrete strategies that address health equity are those aimed at marginalized communities (i.e., communities of color, LGBTQ community, disabled individuals, Black youth) and those that state how physical or social barriers will be removed for the defined communities. Many final CHIPs included strategies that were intentionally broader and thus did not meet this standard. As CHIPs are implemented, it is expected that strategies will be further refined and more strategies will be aimed at marginalized communities with interventions that remove physical or social barriers.
