

# Population Health and IT

Bob Dannenhoffer, MD  
Umpqua Health Alliance  
12/4/14

# The Triple Aim (from IHI)

- Improving the patient experience of care (including quality and satisfaction);
- Improving the health of populations; and
- Reducing the per capita cost of health care.

Triple Aim  
Better care  
Better Health  
Lower cost

A blurry, low-resolution photograph of a person's back and shoulder. The person is wearing a dark-colored shirt. Overlaid on the upper left portion of the image is a list of four items: 'Triple Aim', 'Better Care', 'Better Health', and 'Lower Costs'. The text is in a black, serif font and is rotated diagonally upwards to the right.

Triple Aim  
Better Care  
Better Health  
Lower Costs

# Population Health

- The aggregate or statistical measures of health, made up from individual patient data
- Population health has never been a focus of traditional Medicaid or the insurance system
- Traditional doctor patient relationship is:
  - Personal
  - One on one
  - Problem focused
- Does not address the patient that doesn't show up

# Population Health Examples

- The patient in front of you who smokes is individual health
- The smoking rate for the population is population health
- The immunization status of a patient is an individual health measure
- The immunization rate is population health.
- The person who isn't seen is just as important as the patient who is seen.
- Without sophisticated IT systems, population health very difficult to address

# CCO Metrics

- To address population health, we have developed a set of 17 measures, including measures for:
- Developmental screening
- Timely prenatal care
- Well visits for adolescents
- And for next year, contraceptive care
- Significant dollars attached to attainment of these measures
- Encouragement, exhortations to do better or scoldings not enough

# IT to the Rescue!

- Our system allows every patient to have an assigned PCP. Thus, every patient has a provider who is responsible for their care.
- Using claims data, our system knows what services have been done
- Almost all of our doctors are on one of two EMR's and we can access the data
- We have recreated the CCO measures and can tell which patients have met the measures and which have not.

## Health Risk Screening (Required Annually)

1. Do you now or have you ever used tobacco?

2. How many times in the past year have you had 5 or more drinks in a day?

One Drink =

12 oz. beer

5 oz. wine

1.5 oz. liquor (1 shot)

3. Do you sometimes use illegal drugs, including marijuana without a Medical Marijuana Card, or prescription drugs more than they are prescribed for or just for the way they make you feel?

4. In the last two weeks have you been bothered by: A). Little interest or pleasure in doing things?

B). Feeling down, depressed or hopeless?

# Population Health Team

- Our population health team can insert flags in the medical records
- Our population health team can schedule needed services
- With specific and actionable data, providers have tremendously improved performance, with a minimum of disruption

# Take Aways

- Population health is a sometimes new and difficult concept
- For population health, health information technology is critical
- Provide information that is timely, specific and actionable
- Provide tools that make it very easy to do the right thing
