

OMMUTAP Menu of Services Summary

What no-cost technical assistance services are available through OMMUTAP?

The Oregon Medicaid Meaningful Use Technical Assistance Program (OMMUTAP) offers a suite of **no-cost** technical assistance (TA) services to support Medicaid providers in their efforts to implement, upgrade and effectively use Electronic Health Records (EHR).

We will tailor a plan to fit the needs of each participant and provide the expertise and support to help providers, clinics and Coordinated Care Organizations meet your goals. TA services include:

Certified EHR Assessment, Implementation and Upgrade Assistance

Health IT experts will provide an EHR assessment, including input from providers and clinical staff, to:

- Determine each practice's risk and success factors
- Generate an individualized written EHR assessment summary
- Recommend the best Certified Electronic Health Record Technology (CEHRT) options
- Support the decision whether to adopt, convert or upgrade CEHRT
- Assist in developing a project plan to implement or upgrade CEHRT

Interoperability Consulting and Technical Assistance

Interoperable EHR systems make a patient's information available when and where it is needed. Participants who select this service will receive:

- A personalized EHR interoperability assessment
- A written analysis and improvement project plan focusing on Meaningful Use (MU) measures
- Workflow assistance and support, including review of recommended technical changes and coordination with third party vendors

Risk and Security Training and Assessment

EHR security experts will provide participants with a complete risk assessment including:

- Interviews and an on-site walkthrough to identify potential security risks and to inform personalized recommendations for improved security
- Provider and staff training to support recommended improvements

Meaningful Use Education and Attestation Assistance

Meaningful Use standards ensure that an EHR is fully operational and that workflows promote quality care, efficiency, security and patient safety. Eligible professionals (EP) who meet and attest to Meaningful Use qualify for incentive payments. OMMUTAP helps EPs achieve Meaningful Use through:

- Ongoing education and support on program participation, reporting, and measure workflows appropriate to your current stage of participation (AIU, Stage 1, Stage 2, Modified Stage 2, or Stage 3)
- Tools you can use in your own clinic
- Assistance attesting to Oregon's Medicaid EHR Incentive Program in 2015, 2016 and 2017

Let's Talk!
