OHA's Definition of Health Equity

Oregon will have established a health system that creates health equity when all people can reach their full health potential and well-being and are not disadvantaged by their race, ethnicity, language, disability, age, gender, gender identity, sexual orientation, social class, intersections among these communities or identities, or other socially determined circumstances.

Achieving health equity requires the ongoing collaboration of all regions and sectors of the state, including tribal governments to address:

- **The equitable distribution or redistribution of resources and power; and**
- **Recognizing, reconciling and rectifying historical and contemporary injustices.**

HTO operationalizes the collaboration required to advance OHA's goal of eliminating health inequities by 2030.
