

New Edits in Birth Module

Below is a list of soft (yellow) system edits with explanations and screenshots. You will see these edits starting June 1, 2018. These edits have been added to keep data entry clear, concise and to improve data quality.

Two new edits will appear in the birth module under the Mother's Health section.

Mother's Height in Inches: Under the Mother's Health page, height in inches is required to complete the case. Please enter the number of inches for the mother or 0 if there are no inches. If the field is left blank, a yellow edit will appear upon validation prompting you to enter the field. There will not be an autofill of 0 if the inches column is left blank.

What was the primary attendant type at onset of labor?

Validation Results

Error Message	Override	Goto Field	Popup
BR9314: Mother's height in inches is invalid and cannot be left blank. Please enter Mother's height in inches. If no inches, enter 0; if unknown, enter 99.	<input type="checkbox"/>	<input type="button" value="fix"/>	<input type="button" value="fix"/>

If override is needed, enter the correct information, select the box under **override** and select **save**. The fields will remain yellow but you can continue to the next field.

Birthweight Unknown: In the Birth Module under the Mother's Health page, a yellow edit will trigger if "99" is entered under the "Mother Weight at Deliver (pounds)." The edit will prompt the user to enter 999 if mother's weight is unknown or to override if the mother's weight is actually 99 pounds. This edit has been added to clarify if users entering the data intended to enter "unknown" or "99 lbs."
