* This number is suppressed because it is statistically unreliable.

~ Statistically Significant: significantly higher or lower than the statewide rate.

¹ Confidence intervals provide a measure of how much an estimate might vary due to chance. We present 95% confidence intervals, which means that if we conducted this survey over and over, 95% of the confidence intervals calculated would contain the true population value. Wider intervals suggest the estimate is more unreliable and should be interpreted with caution, however it is the best estimate available.
