A special request from…

Robin Alexander
Umatilla Indian Reservation

Colorectal cancer is the second most deadly form of cancer, but it doesn't have to be.

- Screening can prevent the cancer or catch it early when it's highly treatable.
- But, too few men and women in Oregon over 50 are being screened.
- Research shows that most people get screened because they were encouraged by someone they know and trust.

So if you've been screened for colorectal cancer, please talk about your experience and encourage others to get screened too.

Your story can save a life.
